Dowel Pin Stock

Ready to cut, these pin blanks are 12″ long and have flat ends. Not rated for breaking strength. Diameter tolerance is ± 0.002″.

18-8 Stainless Steel—Corrosion resistant and may be mildly magnetic. Min. Rockwell hardness is B83. ***Alloy Steel—***Easier to machine than high-speed steel. Min. Rockwell hardness is B90. ***High-Speed Tool Steel—***Harder than 18-8 stainless steel and alloy steel. Min. Rockwell hardness is C60.

Dowel Pins

Pins are commonly used as pivots, hinges, shafts, jigs, and fixtures to locate or hold parts. They are precision ground (unless noted) for more accurate alignment, and slightly oversized for a tight fit. To aid insertion, ends are beveled or rounded (except alloy steel pins, which have at least one rounded end). For a tight fit, your hole should be equal to or slightly smaller than the diameter shown. Breaking strength and Rockwell hardness are not rated (unless noted). Materials that have a breaking strength are measured as double shear, which is the force required to break a pin into three pieces.

Type 316 Stainless Steel— Our most corrosion resistant dowel pins. May be magnetic. Diameter tolerance is +0.0002″.

18-8 Stainless Steel— More corrosion resistant than Type 416 stainless steel. May be magnetic. Diameter tolerance is +0.0002″ (unless noted). The 1/64″ has a diameter tolerance of –0.0001″ to +0.0005″, cut ends, and is machined.

Type 416 Stainless Steel— Stronger than both Type 316 and 18-8 stainless steel, and magnetic. All are passivated to guard against oxidation. Diameter tolerance is +0.0001″ to +0.0003″. Meet Mil. Spec. 16555 wherever a dash number is shown.

Alloy Steel— Our strongest dowel pins. Made from hardened steel. Diameter tolerance is +0.0001″ to +0.0003″ (unless noted). Meet ASME B18.8.2 (unless noted). The 1/32″ has a diameter tolerance of +0.0003″, cut ends, is machined, and does not meet ASME specifications.

Black-Oxide Alloy Steel— Provides slightly more rust resistance and friction reduction than alloy steel. Easy to locate because of its dark color. Diameter tolerance is +0.0001″ to +0.0003″. Meet ASME B18.8.2.

Titanium— Nearly as strong as steel, yet 60% lighter and resistant to high temperatures. Nonmagnetic. Diameter tolerance is +0.0001″ to +0.0003″.

Nickel-Copper— Comparable to Monel, it's corrosion resistant in salt water so it's well suited for marine applications. It is heat resistant and may be magnetic. Diameter tolerance is +0.0001″ to +0.0003″.

Type 316 Stainless Steel—*Strength not rated*

Low-Strength Dowel Pins

Easier to machine than standard dowel pins, these multipurpose, low-strength pins have at least one beveled end to aid insertion. They are slightly oversized for a tight fit.

Steel— Magnetic. Diameter tolerance is +0.0001" to +0.0003".

Brass— Also known as shear pins. Our "softest" material, brass is nonmarring, corrosion resistant, and electrically conductive. Nonmagnetic. Diameter tolerance is +0.0002".

Also Available: Aluminum low-strength pins. Please ask for 97325A300 and specify diameter and length.

Metric Dowel Pins

These metric pins are commonly used as pivots, hinges, shafts, jigs, and fixtures to locate or hold parts. They are precision ground, and slightly oversized for a tight fit. To aid insertion, pins are rounded or beveled on both ends.

Type 316 Stainless Steel— Our most corrosion resistant metric dowel pins, they are passivated to guard against oxidation. May be magnetic. Not rated for hardness. Meet DIN7-m6.

18-8 Stainless Steel— More corrosion resistant than alloy steel and passivated. May be magnetic. Not rated for hardness. Meet DIN DIN7-m6.

Alloy Steel— Our strongest metric dowel pins. Breaking strength is measured as single shear, which is the force required to break a pin into two pieces. Minimum Rockwell hardness is C52. Meet DIN6325-m6.

Oversized Dowel Pins

Oversized to fit worn and enlarged holes, these pins have one beveled end to aid insertion. *0.001″ oversized pins* have a diameter tolerance of +0.0009″ to +0.0012″; *0.002″ pins* have a diameter tolerance of +0.0019″ to +0.0021″. Breaking strength not rated.

18-8 Stainless Steel— More corrosion resistant than alloy steel. May be magnetic. Not rated for hardness.

Alloy Steel— Stronger than 18-8 stainless steel. Minimum Rockwell hardness is C60.

0.001″ Oversized—*18-8 Stainless Steel*

Undersized Dowel Pins

Not every hole is precisely sized; these pins have a slightly smaller diameter to fit inconsistent holes. One end is beveled or rounded to aid insertion. Diameter tolerance is –0.0002″.

18-8 Stainless Steel— More corrosion resistant than alloy steel, plus pins are passivated to guard against oxidation. May be magnetic. Minimum Rockwell hardness is B83. Not rated for breaking strength. Meet Mil. Spec. MIL-P-21143/2 wherever a dash number is shown.

Alloy Steel— Stronger than 18-8 stainless steel. Minimum Rockwell hardness is C50. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces.

Plastic Dowel Pins

Pins are made of acetal so they are nonmarring and resistant to gas, oil, and other neutral chemicals. Diameter tolerance is ±0.005″. Maximum temperature is 220° F. Rockwell hardness is M80. Color is white.

Also Available: PTFE pins in lengths marked with a ★. Please ask for 98703A330 and specify diameter and length.

Weld-On Pins

Through Hole

Because these heavy duty steel pins are welded in place, they provide greater rigidity and strength than standard pins. For the best fit, your hole should be equal to or slightly larger than the diameter shown. Not rated for hardness. Three projections on the side of the base increase the weld area.

Base mount pins require no mounting hole, so they can be welded directly to a surface. In ***through hole*** applications, the pin's base is welded directly to a component, allowing its body to pass through an opening that is slightly larger than the dia. shown below.

Also Available: 18-8 stainless steel pins. For surface mount, please ask for 94742A300 and specify dia. and length. For through hole, please ask for 94742A800 and specify dia. and length.

Grooved Dowel Pins

Full Groove pins can be used to hold a wheel to a shaft.

Center Groove pins can be used as T-handles.

Half Groove pins can be used as pivot or hinge pins.

Half Groove with Notch pins can be used as anchors for springs.

Quarter Groove pins can be used as linkage pins.

Each pin is grooved so it contracts as it's forced into a hole, creating tension to lock it in place. Pin ends are beveled or rounded. Pins are zinc-plated steel. For the best fit, your hole should be equal to or slightly larger than the diameter shown. Diameter tolerance is –0.002″ for (W) and ±0.003″ for (X). Length tolerance is +0.08″.

Full Groove—Also known as Type A grooved pins. Use them in place of standard dowel, spring, and taper pins. **Also Available:** Full groove pins in 18-8 stainless steel. Please ask for 98400A666 and specify diameter and length.

Center Groove—Also known as Type E pins. Use them in place of cotter and pivot pins to create T-handles.

Half Groove—Also known as Type H pins. Use them as pivot or hinge pins.

Half Groove with Notch—Also known as Type G pins. Often used as anchors for tension springs. Diameter tolerance is ±0.005″ for (Y).

Quarter Groove—Also known as Type C pins. They are well suited for linkage or pivot applications.

To Order: Please specify full groove, center groove, half groove, half groove with notch, or quarter groove.

Captive Pins

Also known as pilot pins and PEM® brand Type TPS pins, these flush-mount fasteners position, pivot, and align components. To install, punch or drill a hole into sheet metal. Use a punch and anvil or arbor press to clinch the head to the metal. Made of 300 series stainless steel. May be mildly magnetic. Minimum sheet metal thickness is +0.04″. Not rated for breaking strength or hardness.

Also Available: Miniature captive pins. Please ask for 95648A100 and specify diameter (M1, M1.5, or M2) and length (2-6 mm, 8, or 10 mm).

Pull-Out Dowel Pins

Standard

Flat Vent

Spiral Vent

You can reuse these removable pins—they're internally threaded on one end, so you can pull them out with a screw or the tool sold separately on this page. Because these pins are precision ground, they're great for accurately aligning parts. Diameter tolerance is +0.0001″ to +0.0003″. For the best fit, your hole should be equal to or slightly smaller than the diameter shown. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces.

Standard pins have a smooth finish and are used in through holes. ***Vented*** pins relieve trapped air, making them easier to insert and remove from blind holes. ***Flat vent*** pins are ground flat along one side, while ***spiral vent*** pins have grooves cut from end to end.

Alloy Steel—Our strongest pull-out dowel pins. Minimum Rockwell hardness is C47. Meet ASME B18.8.2.

18-8 Stainless Steel—Pins are corrosion resistant and may be mildly magnetic. Not rated for hardness or breaking strength. Dimensions meet ASME B18.8.2, except 1″ diameter.

Also Available: Standard and spiral vent 18-8 stainless steel pins. Please ask for 97175A800 for standard pins and 97352A600 for spiral vent pins, then specify diameter and length.

Pull-Out Dowel Pin Tools

Dowel Puller

Optional Extension

Stud

Install and remove pull-out dowel pins with ease. For a complete tool you'll need a ***dowel puller*** and a ***large*** or ***small stud*** (each sold separately) that fits the diameter of your pull-out pin. The small stud fits 3/16″ to 5/8″ and M6 to M12 diameter pins, large fits 3/4″ to 1 1/2″ and M13 to M20 diameters.

You'll also need a socket head cap screw. The dowel puller fits 6-32 to 1/4″ and M4 to M6 screws and the extension fits 5/16″ to 3/8″ and M8 to M10 screws. For inch sizes see 91251A on pages 3105-3107, for metric sizes see 91290A on pages 3105-3106.

To use, thread one end of the stud into the dowel puller, and fit the other end over the cap screw that you've threaded into your pin, then slide the weight.

The dowel puller has an overall length of 12 1/4″ and a reach of 6 1/2″. Add the optional extension for an additional 5 1/2″ of reach.

Dowel Puller	92330A300	$65.55
Stud for Small Dia. Pin	92330A411	27.80
Stud for Large Dia. Pin	92330A511	27.80
Optional Extension	92330A220	13.64

Metric Pull-Out Dowel Pins

Standard

Flat Vent

They're internally threaded on one end, so you can pull them out with a screw or a threaded puller such as the Pull-Out Dowel Pin Tool on page 3338. Pins are precision ground for accurate alignment. For the best fit, your hole should be equal to or slightly smaller than the diameter shown. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. Pins are made from alloy steel and meet DIN 7979D-m6. Minimum Rockwell hardness is C52.

Standard pins have a smooth finish and are used in through holes.

Flat vent pins are ground flat on one side. They relieve trapped air, so they're easy to insert and remove from blind holes.

Hollow Dowel Pins

Use these lightweight dowels as pass-throughs for wires and other components. They're precision ground for accurate alignment and have beveled ends to aid insertion. Wall thickness is approximately 15-20% of the diameter. For the best fit, your hole should be equal to or slightly smaller than the diameter shown. Pins are made from alloy steel. Not rated for hardness or breaking strength.

High-Tension Dowel Pins

Knurled

Two-Way Barbed

Barbed with Cap

With a rougher surface than standard dowel pins, these pins grip in place with knurls or barbs. Not rated for hardness or breaking strength.

Knurled pins have the roughest gripping surface and flat ends. Made of steel.

Two-way barbed pins have beveled ends that aid insertion and opposing barbs that pull panels together. Also known as Barb-Lok™ pins, they work best with softer materials and plastics. Made of zinc-plated steel.

Barbed with cap pins have barbs for grip and a capped end for a finished appearance. End is beveled to aid insertion. Also known as Barb-Lok™ pins, they work best with softer materials and plastics. Made of zinc-plated steel.

Precision Perforator Pins

Flat Head

Countersunk Head

Well suited for perforating and punching applications, these pins are also known as core, mold, forged, and pilot pins, and pin blanks. Made of high-speed tool steel. Minimum Rockwell hardness is C60.

Flat head pins provide a wide bearing surface. *0.001″ increments* and *fractional* sizes have a shaft diameter tolerance of +0.0002″ for 2½″ long pins and +0.0003″ for 6″ long pins. *0.0001″ increments* have a shaft diameter tolerance of +0.0003″. **To Order:** Please specify shaft diameter from the size ranges listed below. Fractional sizes are only available in the sizes listed.

Countersunk head pins are beveled 60° under the head for a flush surface when countersunk. Shaft diameter tolerance is +0.0003″.

Precision Ejector Pins

Straight Style

Shoulder Style

Also known as pin blanks, knockout pins, forged pins, and pilot pins. Use these pins to eject plastic or alloyed materials from molds. They can also be used for locating and punching. Pins are ground to tight tolerances for minimal friction and long life. Heads are forged for high strength and ends are flat. Made from tool steel. Shaft diameter tolerance for pins up to ½″ diameter is –0.0005″ to –0.0008″, and –0.0003″ to –0.0008″ for diameters larger than ½″. Minimum Rockwell hardness is C41.

Shoulder style pins are more rigid than straight style pins. Shoulder diameter is ⅛″. **To Order:** Please specify ⅜″ or 1⅞″ shoulder length.

L-Shaped Pins

Also known as lag pintles. When installed into wood, provide a free-standing pin that can be used as a hinge. Pins have a black finish.

18-8 Stainless Steel—More corrosion resistant than galvanized steel. May be magnetic.

Galvanized Steel—Stronger than 18-8 stainless steel. May be mildly magnetic.

O'all Lg.	18-8 Stainless Steel		Galvanized Steel

Precision Punch Pins

Made of high-speed tool steel, use these pins as wear-resistant components in molding applications. Also known as pin blanks. Not recommended for use as ejector pins. Shafts are ground flat. Minimum Rockwell hardness is C40. Diameter tolerance is +0.0002″ to +0.0005″.

Taper Pins

Commonly used for positioning components and securing assemblies. These pins have slightly rounded edges to aid insertion. Pins taper at a uniform rate of 1/4″ per 12 inches. To install, drive pins into tapered holes (for tapered drill bits, see 8831A on page 2483). Diameter tolerance at the larger pin end is –0.0007″ to +0.0013″. Meet ANSI/ASME B18.8.2.

18-8 Stainless Steel— Our most corrosion resistant taper pins. May be magnetic. Breaking strength is 54,000 psi. Rockwell hardness is B85.

Steel— Breaking strength is 46,500 psi. Rockwell hardness is B85.

Metric Taper Pins

Position components and secure assemblies with these steel pins. Pins taper at a uniform rate of 1 mm per 50 mm. To install, drive pins into tapered holes (for tapered drill bits, see 8831A on page 2483). Diameter tolerance is –0.04 mm for M3 diameters, –0.048 mm for M4 to M6 diameters, –0.058 mm for M8 to M10 diameters, and –0.07 mm for M12 diameters. Not rated for breaking strength. Rockwell hardness is B52. Meet ISO 2339.

Threaded Taper Pins with Hex Nuts

Tighten the nut to draw the pin out of the hole.

You only need to access one end of these threaded pins for removal; just tighten the hex nut to draw them out. Pins taper at a uniform rate of 1/4″ per 12 inches. Install pins into tapered holes. Large end diameter tolerance is –0.0007″ to +0.0013″.

18-8 Stainless Steel— Our most corrosion resistant threaded taper pins. Breaking strength is 54,000 psi. May be magnetic. Rockwell hardness is B90.

Steel— Breaking strength is 46,500 psi. Rockwell hardness is B85.

Aluminum-Handle Push-Button Quick-Release Pins

T-Handle

T-Handle with Lanyard

High Profile

High Profile with Lanyard

L-Handle

A push of a button is all that's necessary to insert and remove these pins. Pins have black aluminum handles and stainless steel shafts. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. Rockwell hardness is C40.

T-Handle with Lanyard—Have a 12″ long plastic-coated stainless steel lanyard with an aluminum tab.

High Profile—Extra height and a smaller width makes the release button more accessible in tight spaces.

High Profile with Lanyard—Have a 12″ long plastic-coated stainless steel lanyard with an aluminum tab.

L-Handle—Often used where T-handles won't fit.

Aluminum-Handle Push-Button Quick-Release Pins *(Continued from previous page)*

T-Handle

T-Handle with Lanyard

High Profile

High Profile with Lanyard

L-Handle

A push of a button is all that's necessary to insert and remove these pins. Pins have black aluminum handles and stainless steel shafts. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. Rockwell hardness is C40.

T-Handle with Lanyard—Have a 12″ long plastic-coated stainless steel lanyard with an aluminum tab.

High Profile—Extra height and a smaller width makes the release button more accessible in tight spaces.

High Profile with Lanyard—Have a 12″ long plastic-coated stainless steel lanyard with an aluminum tab.

L-Handle—Often used where T-handles won't fit.

All-Stainless Steel Heavy Duty Push-Button Quick-Release Pins

Also known as ground handling pins, these corrosion-resistant, extra-rugged pins have a handle welded directly to the head. Diameter tolerance is –0.003″ to –0.001″. Pin diameter equals hole size. Handle and push button are 18-8 stainless steel; shaft is 17-4 stainless steel. Rockwell hardness is C40. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. Meet NASM 23460. Split ring included.

All-Stainless Steel Push-Button Quick-Release Pins

For improved corrosion resistance in harsh environments, choose these pins. Shaft diameter tolerance is –0.0015″. Shaft is made of 17-4 PH stainless steel and has a Rockwell hardness of C40. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces.

Ring Grip—Also known as R-style marine pins, they have an easy-to-pull ring.

Recessed—Also known as M-style marine pins, they have a recessed button that prevents accidental pin removal. Pin has a hole to attach to a ring and lanyard (sold separately on page 3346).

Also Available: Type 316 stainless steel ring grip pins marked with a ★. Please ask for 92384A500 and specify diameter and length.

All-Stainless Steel High-Tension Push-Button Quick-Release Pins

Unlike ordinary quick-release pins with two locking balls, these have four to provide almost double the holding power. Diameter tolerance is –0.003″ to –0.0015″. Pin diameter equals hole size. Made of 17-4 PH stainless steel with a Rockwell hardness of C40. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. Meet NASM 23460.

Metric Push-Button Quick-Release Pins

Choose from standard T-handle quick-release pins and narrow head pins, which work well in space-restricted areas. Diameter tolerance is –0.04 mm to –0.08 mm. Pin diameter equals hole size. Shaft is made of 17-4 PH stainless steel. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. Rockwell hardness is C40.

T-Handle—Have a lightweight black aluminum handle.

Narrow Head—Head diameter is 4 mm wider than the pin diameter, except for M12, which is 8 mm wider than the pin diameter. Includes a 250 mm long plastic lanyard.

Plastic-Handle Quick-Release Pins

Each of these general purpose pins have a single locking ball and a durable, black handle. Shafts are made of zinc-plated steel and have a diameter tolerance of ±0.003″. Pin diameter equals hole size. Breaking strength is measured as single shear, which is the force required to break a pin into two pieces. Rockwell hardness is B85.

T-Handle—Have a 2″ wide handle, except the ½″ dia. pins have a 3½″ wide handle.

T-Handle with Lanyard—Have a 2¼″ handle. Lanyard is black plastic and is 6″ long when coiled and 6 feet long when extended.

Ball Handle—Have a 1⅜″ diameter handle.

Receptacles and Retaining Caps for Push-Button Quick-Release Pins

Diamond

Oval

Round

When your pin doesn't have a surface to lock against, use these receptacles for a permanent mating hole. Receptacle mounting hole size is 6-32, except ½″ diameter is 10-32. Use retaining caps when a hole is too big for your pin to lock into.

Locking Push-Pull Quick-Release Pins

Also known as double-acting pins. Push or pull the handle to insert and remove. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces.

Also Available: T-handle quick-release pins in lengths marked with a ★. Please ask for 94505A100 and specify dia. and length.

Clamping-Action Push-Button Quick-Release Pins

Pins have two locking balls for holding power. The shaft retracts up to 5 mm into the pin to hold thin sheets of material together. Pin diameter equals hole size. The shaft is stainless steel with a minimum hardness of 150 Brinell. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. The handle, button, and 250 mm lanyard are made of plastic.

Accessories for Quick-Release Pins

Lanyards— Lanyards are made of wire rope with a clear nylon coating. Not load rated. Use a 12″ long lanyard for pins with usable lengths over 3½″. See page 1422 for more lanyards.

Ring—Use to attach a lanyard to a quick-release pin. Made of stainless steel. For other rings, see page 3359.

Quick-Release Pins

Also known as faspins, these pins have a ring grip. The ball springs inward during installation and pops out to lock the pin in place. The ball and spring are Type 316 stainless steel. The pin diameter equals the hole size. The pin end (A) extends beyond the ball by a length up to 30% greater than the pin diameter. Shaft diameter tolerance is –0.003″. Shafts have a minimum Rockwell hardness of B85, except aluminum have a minimum Rockwell hardness of B56. Breaking strength is measured as single shear, which is the force required to break a pin into two pieces.

Type 316 stainless steel pins are the most corrosion resistant. May be mildly magnetic.

18-8 stainless steel pins are more corrosion resistant than zinc-plated pins and may be mildly magnetic.

Pins with lanyard that have a usable length up to 2.9″ have a 6″ long lanyard; all others have a 12″ long lanyard. All lanyards are nylon coated.

Zinc-plated steel pins have good rust resistance.

Aluminum pins are lightweight, corrosion resistant, and nonmagnetic.

Metric Quick-Release Pins

Ring Grip

High Profile

The spring-loaded ball retracts during installation and pops out to lock your pin in place. The shaft is 18-8 stainless steel, the ball and spring are stainless steel; may be mildly magnetic. Shaft diameter tolerance is –0.004 mm to –0.08 mm. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces.

Ring-grip pins are easy to grab and allow you to add a lanyard. Also known as faspins. Shaft has a minimum Rockwell hardness of B96. **Also Available:** Zinc-plated ring-grip pins. Please ask for 95335A500 and specify dia. and length.

High-profile pins have a handle and a hole for adding a lanyard. Shaft hardness is 150 Brinell.

Heavy Duty Quick-Release Pins

Two spring-loaded locking balls deliver superior holding power. Pins meet MIL-P-45952/1. Balls are steel, spring is 17-7 stainless steel, and shaft and ring are 18-8 stainless steel. The shaft has a minimum Rockwell hardness of C40. Shaft diameter tolerance is –0.003″. Pin end (A) extends beyond the ball by a length of the pin diameter plus 1/8″. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces.

High Visibility Quick-Release Pins

A bright-orange plastic-coated handle makes these pins easy to see and gives you more gripping leverage. The ball springs inward during installation and pops out to lock pin in place. The ball is stainless steel. The shaft is steel and has a minimum Rockwell hardness of B96. Shaft diameter tolerance is +0.004″ to –0.005″. Pin diameter is slightly larger than the hole size. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces.

Shoulder-Style Quick-Release Pins

Ring Grip

T-Handle

The shoulder keeps a portion of the pin outside the hole. It also makes the ring grip or T-handle easy to grab. All have a Type 316 stainless steel ball and spring. The ball has a minimum Rockwell hardness of C25. Shaft diameter tolerance is –0.003″. Pin diameter equals the hole size. Breaking strength is measured as single shear, which is the force required to break the pin into two pieces.

18-8 stainless steel pins are more corrosion resistant than zinc-plated steel pins. May be mildly magnetic. The shaft has a minimum Rockwell hardness of B85.

Zinc-plated steel pins offer good rust resistance. The shaft has a minimum Rockwell hardness of B96.

To Order: Please specify ring grip or T-handle.

Add-a-Knob Quick-Release Pins

Customize these pins with the knob or handle of your choice. Pins have an 18-8 stainless steel shaft, ball, and spring. Shaft has a minimum Rockwell hardness of B85. Shaft diameter tolerance is –0.003″. Pin diameter equals the hole size. Breaking strength is measured as single shear, which is the force required to break a pin into two pieces. See pages 2211-2215 for knobs.

Expanding Diameter Quick-Release Pins

Flip the handle 180° to expand and contract the shaft for a tight, vibration-resistant fit. All are passivated 17-4 PH stainless steel with a gray anodized aluminum handle. Breaking strength is measured as double shear, which is the force required to break a pin into three pieces. *Note:* Install pins their entire usable length.

Weld-In Pull Pins

The pin can't fall out when you weld the barrel in place. Also known as pop pins and clamp pins. Pull the handle to retract the pin; release it and the pin springs back to the extended position. All have a 1″ diameter barrel. Pin diameter tolerance is ±0.01″. Not rated for breaking strength.

Threaded shank pins have a 1/2″ long 3/8″-16 threaded stud so you can add the handle of your choice (see pages 2211-2219).

T-handle and ***ball handle*** pins have a black plastic handle. *Locking pins* lock in the retracted position with a quarter turn of the knob. Temperature range is 0° to 165° F.

18-8 stainless steel pins offer the most corrosion resistance and may be mildly magnetic. ***Zinc-plated steel*** pins have good rust resistance.

Quick-Release Button Connectors for Telescoping Tubing

Also known as snap buttons and tubing buttons, connectors use spring force and a pin-like button to hold telescoping pieces of tubing together. Install a connector in the smaller tube and push the smaller tube inside your larger tube until the connector button pops into a hole.

Type 410 stainless steel pins are more corrosion resistant and just as strong as zinc-plated steel connectors. They are magnetic. Minimum Rockwell hardness is C42.

Zinc-plated steel pins have good rust resistance. Minimum Rockwell hardness is C44.

Quick-Release Clevis Pins with Head

Instead of a cotter pin that can get lost, these use a spring-loaded stainless steel ball to hold them in place. The shaft and head are made of rust-resistant zinc-plated steel. Minimum Rockwell hardness is B60. Shaft diameter tolerance is –0.0015″ to –0.009″. Pin diameter equals hole size. Not rated for breaking strength.

Clevis Pins

With Hairpin Cotter Pin

Without Cotter Pin

Use in place of bolts and rivets for temporary, quick-disconnect, and permanent fastening. Pin diameter equals hole size.

Type 316 stainless steel pins are our most corrosion resistant clevis pins. They may be mildly magnetic and have a minimum Rockwell hardness of B95.

18-8 stainless steel pins are more corrosion resistant than zinc-plated steel and plain steel pins. They may be mildly magnetic and have a minimum Rockwell hardness of B80.

Zinc-plated steel pins are more rust resistant than plain steel pins. They're made from C1010-C1018 steel and have a minimum Rockwell hardness of B80.

Plain steel pins with 3/16″ to 1″ diameters are made from C1010-C1018 steel and have a minimum Rockwell hardness of B80. Those with 1 1/8″ to 1 1/2″ diameters are made from C1038-C1045 steel and have a minimum Rockwell hardness of B63.

With Hairpin Cotter Pin—Each clevis pin comes with a cotter pin of the same material.

120-Piece Assortment without Cotter Pins—See pages 3356-3358 for cotter pins.

Contains 10 each of the following sizes: 3/16"×1/2", 3/4", 1", 1 1/4"; 1/4"×3/4", 1", 1 1/4", 1 1/2" and; 3/8"×1", 1 1/4", 1 1/2", and 2". Furnished in an 11" Lg.×7" Wd.×1 3/4" Dp. compartmented plastic box with lid chart.

18-8 Stainless Steel	98345A006	$98.54
Plain Steel	98345A005	37.81
Zinc-Plated Steel	98345A102	40.93

For information about clevis pin tolerances, see page 3352.

Wear-Resistant Clevis Pins

Made of zinc yellow-chromate plated case-hardened C1010-C1018 steel, these pins are harder and more corrosion resistant than plain steel pins. Rockwell hardness is C58. Pin dia. equals hole size.

Each requires a cotter pin to lock in place (not included, see pages 3356-3358).

Adjustable-Length Clevis Pins

Also called universal clevis pins, these pins have multiple holes so you can "adjust" the length by moving the cotter pin (not included, see pages 3356-3358). Starting from the end opposite the head, holes are spaced 1/4″ apart, center to center. Excess pin length can be cut.

Pins are made from rust-resistant C1010-C1022 zinc-plated steel and have a clear finish.

Grooved Clevis Pins with Retaining Ring

No need for a cotter pin, these 18-8 stainless steel clevis pins are grooved to accommodate a Type PH 15-7 MO stainless steel E-style retaining ring (included). Retaining ring also acts as a stop. Pins may be mildly magnetic and have a minimum Rockwell hardness of B80. Package quantity is 5 (unless noted).

For replacement E-style retaining rings, see page 3274.

SAE Clevis Pins

Manufactured to standard SAE (Society of Automotive Engineers) dimensions. All pins are C1010-C1018 steel. Rockwell hardness is B80-B100. Pin diameter equals hole size.

Pins require a cotter pin to lock in place (not included, see pages 3356-3356).

Headless Clevis Pins with Cotter Pins and Retaining Rings

Drilled with Cotter Pins

Grooved with Retaining Rings

Also known as hydraulic cylinder pins, these pins are headless for maximum versatility. Pins are made from rust-resistant zinc-plated C1010-C1018 steel. They have a length tolerance of +0.020″ and a dia. tolerance of –0.002″. Minimum Rockwell hardness is B80.

Drilled pins come with two zinc-plated C1006 steel cotter pins.

Grooved pins come with two black phosphate E-style retaining rings. For replacement E-style retaining rings, see page 3274.

For information about clevis pin tolerances, see page 3352.

Extra-Long Headless Clevis Pins with Cotter Pins

Great when you need extra length. Clevis pin and cotter pins are made from 18-8 stainless steel, which is corrosion resistant and may be mildly magnetic. Clevis pins have a minimum Rockwell hardness of B83.

Threaded Clevis Pins with Hairpin Cotter Pin

Also known as hood pins, they're threaded so you can bolt or thread them to a component. Clevis and hairpin cotter pin are 18-8 stainless steel, corrosion resistant, and may be mildly magnetic. Minimum Rockwell hardness is B89. Class 2A thread fit.

Thread Size	Thread Lg.	O'all Lg.

Bent-Pull Hitch Pins

A simple bend makes these pins easy to insert and pull out. Black luster-coated steel and 18-8 stainless steel pins have a minimum Rockwell hardness of B80; zinc-plated steel pins are not rated. All pins are not class rated for towing.

Padlockable pins have a 0.32″ hole to accept a lock with a 5/16″ or smaller shackle (lock not included, see pages 2932-2943). Minimum horizontal shackle clearance is 5/8″. Minimum vertical clearance is 1″ for 5/8″ dia. pins and 1 1/2″ for 3/4″ dia. pins. Pins are made from black luster-coated C1018 steel, which provides 700 hours of salt spray resistance per ASTM B117 compared to zinc plating, which provides 200 hours or less.

Hitch pins with hairpin cotter pin come in 18-8 stainless steel and zinc-plated steel. *18-8 stainless steel* offers the most corrosion resistance and may be mildly magnetic. *Zinc-plated steel* pins are rust resistant and made from C1005-C1022 steel.

Padlockable (Padlock not included.)

Heavy Duty Hitch Pins

A black PVC-coated steel T-handle is welded to the pin for extra strength. Pins are rust-resistant black zinc-plated C1045 steel. They have a collar that acts as a stop and a 1/4″ dia. hole for a hairpin cotter pin (not included, see pg. 3357). Min. Rockwell hardness is B90. Not class rated for towing.

●Has a round handle.

Tethered Hitch Pins

Keep the retaining pin close at hand. Not class rated for towing.

Style 1 pins are hardened C1045 steel and have a 3 3/4″ Wd. × 1 5/8″ Ht. (unless noted) red PVC-coated steel handle. Hairpin cotter pin is steel such as C1045-C1050 and connected to a galvanized steel cable lanyard. Pins with usable lengths up to 4 1/2″ have a 6″ long lanyard; those with 5 1/2″ and 6 1/2″ usable lengths have a 12″ lanyard; those with 7 1/2″ and 8 1/2″ usable lengths have a 15″ long lanyard. Min. Rockwell hardness is C32.

Style 2 pins are zinc yellow-chromate plated hardened steel such as C1038-C1541; handle is C1008 steel. The zinc-plated spring steel wire hairpin cotter pin is connected to a nylon-coated galvanized steel cable lanyard. Pins with 4″ and 4 1/4″ usable lengths have an 8″ long lanyard. Pins with 5 3/4″ to 6 1/4″ usable lengths have a 9″ long lanyard; those with 6 1/2″ to 7″ usable lengths have a 12″ long lanyard. Pins up to 1″ dia. have a min. Rockwell hardness of C25; pins with 1 1/8″ dia. and over have a min. Rockwell hardness of C19.

Style 3 pins are hardened zinc yellow-chromate plated C1541 steel. Handle is hardened steel such as C1010-C1020 steel. Each has a C1010-C1018 steel ring-snap pin connected to a 12″ long zinc-plated low-carbon steel chain. Min. Rockwell hardness is C28.

★ Handle is 4″ Wd. × 1 7/8″ Ht. ■ Handle is 4 7/8″ Wd. × 2″ Ht.
♥ Has a round handle.

Cotter Pins

Designed with one prong slightly longer than the other so they're easy to open.
Type 316 and ***18-8 Stainless Steel—*** Type 316 is more resistant to corrosion than 18-8 stainless steel. Both may be mildly magnetic.
Brass— Alloy 70/30. Resists rust and mild atmospheric corrosion. Is electrically conductive and nonmagnetic.
Zinc-Plated Steel— Made from rust-resistant zinc-plated C1005-C1022 steel (unless noted).

Hairpin Cotter Pins

Also known as hitch pin clips, these cotter pins are ideal for quick assembly. They're commonly used with clevis pins and shafts. ***Type 316 stainless steel*** is more corrosion resistant than 18-8 stainless steel and may be mildly magnetic. ***18-8 stainless steel*** is more corrosion resistant than zinc-plated steel and may be mildly magnetic. ***Zinc-plated steel*** is made from rust-resistant C1045-C1050 steel.

Aluminum Clevis Pins with Cotter Pin

Made from nonmagnetic 7075-T6 aluminum, these clevis pins have a C1065 zinc-plated steel ring grip and a 5056 aluminum cotter pin. Rockwell hardness is B87. Pin diameter equals hole size.

Dissolvable Shims

There's no cutting and grinding necessary for removal—spray with water and shims instantly melt away. Use to create a gap while welding plates, flanges, and pipes. Made from a bendable mixture of wood pulp and paper, they leave no harmful residue.

Bow Tie Cotter Pins

You can push or pull these pins from either side of the hole thanks to their unique double-headed design. Once they're locked on to a pin there's little chance for them to be accidentally knocked or shaken off. All are made from rust-resistant zinc-plated C1045-C1050 steel.

Self-Locking Ring-Snap Pins

With Chain and Cotter Pin

(Hitch pin not included.)

Also known as linch pins and click pins, these quick-disconnect pins have a solid shank and a self-locking ring that snaps down to lock the pin in place. Pins are offered with and without an 8 1/4" long zinc-plated steel chain and 3/16" Dia. x 1 3/8" Lg. cotter pin.

Shank is made from rust-resistant zinc yellow-chromate plated C1010-C1020 steel; ring is made from spring steel (unless noted). Shank diameter tolerance is +0.0079" to –0.0118". Length (A) tolerance is ±0.039". Hitch pin diameter (B) is the maximum diameter that the snap pin will fit.

● Ring has black phosphate finish.

Clip Style Retaining Pins

Coiled with Lanyard

Standard

Tension keeps these pins locked. Easy to open and close.

Use ***coiled*** pins to secure hitch pins and gates and to replace hairpin clips and cotter pins. Choose from pins with and without a lanyard. The lanyard is made of 1/16" diameter 18-8 stainless steel cable and is 6" long on 1/16" and 3/32" diameter pins; 12" long on 1/8" and 5/32" diameter pins.

Use ***standard*** pins for securing hitch and clevis pins.

18-8 stainless steel pins are more corrosion resistant than zinc-plated steel and may be mildly magnetic. ***Zinc-plated steel*** pins are made from rust-resistant C1045-C1050 spring-steel wire.

Cotter Pin Extractor

Pry out cotter pins with ease. Has a pointed end to remove any size pin. Handle is plastic. Overall length is 7 3/4".

98436A120 ..... $11.92

Gravity Pin

Connects telescoping pipe. Fits pipe ODs from 1 1/2" to 1 5/8". Fits in 7/16" holes. Made from rust-resistant zinc-plated C1018 steel.

97529A100 ..... $1.89

Locking Pins

Squared Retainer | *Squared Retainer with Hook Closure* | *Rounded Retainer with Tab* | *For Pipe*

Also known as linch pins and PTO pins, these pins take the place of clevis/cotter pin combinations.

Pins with ***squared*** and ***rounded retainer*** snap closed. Pins *with tab* have an extended retainer so they're easier to open. Pins *with hook closure* use tension to stay closed.

Pins ***for pipe*** have a rounded retainer designed to fit standard pipe sizes. They use spring force to stay closed.

18-8 stainless steel pins are more corrosion resistant than zinc-plated steel and may be mildly magnetic. ***Zinc-plated steel*** pins are made from C1008-C1038 steel (unless noted).

Cotter Rings

Also known as circle cotters, cotter rings are a great way to avoid the sharp ends of a cotter pin. To install, insert the center prong into a hole and turn until the ring snaps in place.

18-8 stainless steel rings are the most corrosion resistant and may be mildly magnetic. ***Zinc-plated steel*** rings are made from rust-resistant C1045-C1050 steel.

Split Rings

Also known as key rings, these classic split rings are made from heavy duty half-round wire. The ends are offset to make the rings easier to attach.

18-8 stainless steel rings are the most corrosion resistant and may be mildly magnetic. ***Brass*** rings are made from Alloy 260. They're rust resistant, electrically conductive, and nonmagnetic. ***Zinc-plated steel*** rings are made from rust-resistant C1065 heat-treated spring steel.

♣ Has a 3-ring coil.

420-Piece Zinc-Plated Steel Assortment

Includes rings with the following ODs: 0.542″, 0.670″, 0.740″, 0.875″, 0.970″, 1.100″, 1.250″, 1.375″, 1.480″, 1.640″, and 2.240″. Furnished in a 13 1/8″ Lg.×9″ Wd.×2 5/16″ Dp. clear plastic compartmented box with lid chart.

90177A600 ..... $104.49

Split Ring Pliers

Attach and remove split rings with ease.

1 ***Light Duty Pliers***—Made from zinc-plated steel. Overall length is 5 1/4″.

98215A210 ..... $5.71

2 ***Heavy Duty Pliers***—Made from high carbon steel. They have rubber grips and a return spring that automatically opens the jaw. Overall length is 5 1/4″.

98215A390 ..... $17.87

Type 316 Stainless Steel Split Rings

A heavier gauge wire than our cotter rings and more corrosion resistant than our other split rings. Often used as handles for quick-release pins. May be mildly magnetic.

276-Piece Zinc-Plated Steel Assortment

Pins fit shafts with 1/8″ to 1″ diameters.

Assortment includes the following: 50 each for 1/8″, 3/16″, and 1/4″ shaft dia.; 40 each for 5/16″ shaft dia.; 30 each for 3/8″ shaft dia.; 20 each for 1/2″ shaft dia.; 15 each for 5/8″ and 3/4″ shaft dia.; 6 each for 1″ shaft dia. Furnished in an 8″ Lg.×4 1/2″ Wd.×1 1/2″ Dp. compartmented plastic box.

98572A570 ..... $26.45

Locking Spring-Loaded Clevis Pins

When installed, the spring holds the pin tight while the toggle locks it in place. Pin diameter is 1/4″. For best fit, your hole should be slightly larger than 1/4″. Pins are made of Type 316 stainless steel and may be mildly magnetic.

Woodruff Keys

Lock pulleys and gears tightly to transmission shafts. Woodruff keys reach deep into the keyway shaft for a firm grip, yet they can rock in their seat and adjust to an angular spine. They can withstand great strain, so rollover is unlikely. Tolerances: width (W), +.001″; full diameter (B), –.010″; actual length, –.010″; actual height (full radius), –.005″, (flat bottom) –.006″.

Plain Steel— Made from C1035 steel. They are nonhardened, so they're easy to machine. Use these keys for general purpose applications. Tensile strength is 84,000 psi. Rockwell hardness is B86.

Alloy Steel— Made from 8630 alloy steel. For use in high-strength applications. Tensile strength is 112,500 psi. Rockwell hardness is C40-C50.

Type 316 Stainless Steel— Has excellent corrosion resistance and can withstand many chemicals. It may be slightly magnetic. Tensile strength is 85,000 psi. Rockwell hardness is B85-B95.

Plain Steel Woodruff Key Assortments

97 Keys in 35 Sizes— Includes the following key numbers: 1 each of 1, 2, 4, 5, 12, 14, 16, 17, 19, 20, 21, D, E, 22, 23, 24, 26, 27, 28, 29; 3 each of 10, 13, 15, B, 152; 4 each of 3, 6, 7, 8, 91; 5 each of 18, G; 10 each of 11, A; and 12 each of 9. Furnished in an 8¼″ Lg.× 4¼″ Wd.×1⅜″ Dp. compartmented plastic box.

98584A170 ..... $62.79

225 Keys in 18 Sizes— Includes the following key numbers: 15 each of 211, 212, 213, 1, 2, 3, 5, 7, 6, 61, 9, 91; 10 each of 11, 13, A; and 5 each of 15, 18, E. Furnished in a 10¾″ Lg.×6½″ Wd.×1¾″ Dp. compartmented plastic box with a lid chart.

98540A120 ..... $113.78

Metric Woodruff Keys

Made to DIN 6888, these plain steel woodruff keys are the same as above, except in metric sizes. All are full-radius style. Width (W) tolerance is +.025 mm for 1.5 to 3 mm keys; +.030 mm for 4 to 6 mm keys; +.036 mm for 8 to 10 mm keys. Tensile strength is 85,000 psi. Rockwell hardness is C24.

About Key Stock Tolerances

Tolerance is the amount of variation in the size for each piece of bar stock. The tolerance can be oversized, undersized, or both.

Oversized— Size may be larger than stated for a tighter fit. The size variation will measure as a plus tolerance.

Undersized— Size may be slightly smaller than stated for a looser fit. The size variation will measure as a minus tolerance.

Standard— Size may be slightly smaller or larger than stated. The variation may measure from a minus to a plus tolerance.

Key Stock

Make your own machine keys from key stock. They're ready to cut, file, and fit. Length tolerance is –.125″.

Type 416 Stainless Steel (Undersized)— Can be heat treated for greater strength, but is less corrosion resistant than Type 316 and 18-8 stainless steel. This material is magnetic. Tolerances: 3/16″ to 1/4″ sizes: –.002″; 5/16″ to 3/8″ sizes: –.003″; 1/2″ to 3/4″ sizes: –.004″. Tensile strength is not rated. Rockwell hardness is B89.

Type 316 Stainless Steel (Undersized)— This alloy resists corrosion better than 18-8 stainless steel. It withstands many chemicals, even the pitting caused by chlorides. May be mildly magnetic. Tolerances: 3/16″ to 5/16″ sizes: –.002″; 3/8″ size: –.003″; 1/2″ to 1″ sizes: –.004″. Minimum tensile strength is 75,000 psi. Not rated for hardness.

18-8 Stainless Steel— Corrosion resistant and may be mildly magnetic. Minimum tensile strength is 75,000 psi. Not rated for hardness. *(Oversized)*—Tolerance: +.002″. *(Undersized)*—Tolerances: 1/8″ to 1/4″ sizes: –.002″; 5/16″ to 7/16″ sizes: –.003″; 1/2″ to 7/8″ sizes: –.004″; 1″ size: –.006″; 1 1/4″ to 2″ sizes: –.008″. *(Standard)*—Tolerances: 3/16″ to 3/8″ sizes: ±.008″; 1/2″ to 3/4″ sizes: ±.010″.

Brass (Standard)— Made from alloy 360 brass, which contains lead for good machinability. It's corrosion resistant and nonmagnetic. Tolerances: 1/8″ to 1/2″ sizes: ±.0035″; 5/8″ to 1″ sizes: ±.0045″; 1 1/4″ size: ±.005″. Minimum tensile strength is 40,000 psi. Minimum Rockwell hardness is B35.

Aluminum (Standard)— This lightweight alloy 6061 aluminum is one-third the weight of steel. Offers good resistance to weather-related corrosion. Tolerances: 1/4″ to 3/8″ sizes: ±.008″; 1/2″ to 5/8″ sizes: ±.009″. Minimum tensile strength is 38,000 psi. Not rated for hardness.

Alloy Steel (Oversized)— Made from Alloy 8630 steel. Tolerance: +.001″. Minimum tensile strength is 90,000 psi. Minimum Rockwell hardness is B90. Can be heat treated to Rockwell hardness C40-50.

High-Carbon Plain Steel (Standard)— Annealed for easy machining, this C1090-C1095 steel is heat treatable. Ideal where hardenability is required. Tolerances: 1/16″ to 3/16″ sizes: ±.0005″; 1/4″ to 5/8″ sizes: ±.001″; 3/4″ to 1″ sizes: ±.0015″. Minimum tensile strength is 90,000 psi. Rockwell hardness is B90.

Plain Steel (Oversized)— All are made from low strength steel. Tolerances: 1/16″ to 3/4″ sizes: +.002″; 13/16″ to 1 1/4″ sizes: +.003″. Minimum tensile strength is 55,000 psi. Not rated for hardness.

Zinc-Plated Steel— Zinc plated for corrosion resistance. All are made from low strength steel. Minimum tensile strength is 55,000 psi. Not rated for hardness. *(Oversized)*—Tolerances: 1/16″ to 3/4″ sizes: +.003″; 13/16″ to 1 1/2″ sizes: +.004″; 1 5/8″ to 2″ sizes: +.005″. *(Undersized)*—Tolerances: 1/8″ to 3/4″ sizes: –.002″; 7/8″ to 1 1/2″ sizes: –.003″; 1 5/8″ to 2″ sizes: –.004″.

Metric Key Stock

Same as key stock shown above and on the previous page, in metric sizes. All are 12″ long. Length tolerance is –3.175 mm.

Type 316 Stainless Steel (Undersized)—DIN 178. Tolerances: 2×2 mm and 3×3 mm: –.06 mm; 4×4 mm to 6×6 mm: –.075 mm; 7×7 mm to 10×10 mm: –.09 mm; 12×12 mm to 16×16 mm: –.11 mm. Tensile strength is 85,000 psi. Rockwell hardness is B85-B95.

18-8 Stainless Steel (Oversized)—Tolerance: +.127 mm. Tensile strength is 90,000 psi. Rockwell hardness is B85-B95.

Zinc-Plated C1045 Steel (Oversized)—Tolerance: +.076 mm. Tensile strength is 98,000 psi. Rockwell hardness is B95.

Step Key Stock

Type 1

Type 2

Oversized key stock is ground down to the tolerances listed below. Made from C1018 steel and zinc plated for corrosion resistance. Tensile strength is 85,000 psi. Rockwell hardness is B85. All are 12″ long. Length tolerance is –.125″.

Type 1—Use for repair of damaged keyways in shafts.

Type 2—For gears, pulleys, and similar parts.

92271A410 ..... $82.38

Oversized Key Stock Assortments

7 Pieces in 7 Sizes— Bars are 12″ long. Includes one of each size: 1/8″×1/8″, 3/16″×3/16″, 1/4″×1/4″, 5/16″×5/16″, 3/8″×3/8″, 7/16″×7/16″, and 1/2″×1/2″. Furnished in a cardboard box.

18-8 Stainless Steel **90143A200** $99.74

7 Pieces in 7 Sizes— Bars are 12″ long. Includes one each of sizes: 1/8″×1/8″, 3/16″×3/16″, 3/16″×1/4″, 1/4″×5/16″, 5/16″×3/8″, 3/8″×7/16″, and 7/16″×1/2″. Furnished in a cardboard box.

Zinc-Plated Steel **90142A160** $15.95

31 Pieces in 7 Sizes— Bars are 12″ long. Includes 5 each of 1/8″×1/8″, 3/16″×3/16″, 1/4″×1/4″, 5/16″×5/16″, 3/8″×3/8″, and 3 each of 7/16″×7/16″, 1/2″×1/2″. Furnished in a compartmented cardboard box.

18-8 Stainless Steel **90143A140** $203.12
Zinc-Plated Steel **90142A140** 55.73

Tapered Machine Keys with Gib Head

Use these keys on power transmission shafts to hold pulleys and gears tightly on the shaft. Keys taper 1/8″ per foot and fit snugly into the keyway. Made from plain C1018 steel. The square dimension is measured under the head at A and B. Tolerances for the square dimension are: 3/16″ to 1/2″: –.002″; 5/8″ to 1″: –.003″. Tolerance for the C dimension is ±.005″. Tensile strength is 82,000 psi. Rockwell hardness is B85.

Square End Machine Key Assortments

Zinc-Plated Steel— 58 undersized keys in 13 sizes. Includes the following sizes: 3 each of 1/8″ square×3/4″ lg., 1/8″ square×1″ lg.; 5 each 3/16″ square×3/4″ lg., 3/16″ square×1″ lg., 3/16″ square×1 1/4″ lg., 1/4″ square×3/4″ lg., 1/4″ square×1 1/4″ lg., 1/4″ square×1 1/2″ lg., 5/16″ square×1 1/4″ lg., 5/16″ square×1 1/2″ lg., 3/8″ square×1 1/4″ lg., 3/8″ square×1 1/2″ lg., and 2 each of 1/2″ square×1 1/2″ lg. Tolerance: –.002″. Furnished in an 8 1/4″ Lg.×4 1/4″ Wd.×1 5/8″ Dp. compartmented plastic box with lid chart.

98800A110 ..... $77.72

Metric Steel— 25 oversized keys in 13 sizes. All are made of plain C1045 steel and are 3 3/8″ Lg. Includes the following sizes: 2 each in square sizes of 4 mm, 5 mm, 7 mm, 10 mm, 12 mm; 3 each in square sizes of 6 mm, 8 mm; 2 each of rectangular sizes 7 mm×8 mm, 8 mm×10 mm, 8 mm×12 mm; and 1 each of rectangular sizes 10 mm×16 mm, 11 mm×18 mm, 12 mm×20 mm. Tolerance: +.0762 mm (+.002″). Furnished in an 8″ Lg.×4 3/8″ Wd.×1 1/4″ Dp. compartmented plastic box with label.

98505A018 ..... $29.39

Machine Key and Woodruff Key Assortment

401 Keys in 18 Sizes— Includes 248 machine keys and 153 woodruff keys. *Machine keys* are made of plain C1018 carbon steel and are 1 1/2″ long. Includes 25 each of rectangular size 3/16″×1/4″, and the following square sizes: 50 each 1/8″; 30 each 3/16″; 18 each 1/4″; 15 each 5/16″ and 3/8″. *Woodruff keys* are plain C1035 steel. Includes the following key numbers: 45 each: 3 and 5; 22 each: 6 and 7; 30 each 9; 15 each: 10 and A; 12 each: 13; 20 each: 15; 9 each: C and 21; and 4 each: G. Furnished in a 13″ Lg.×8 11/16″ Wd.×2 1/2″ Dp. compartmented plastic box with lid chart.

90141A212 ..... $136.33

Machine Keys

Made from plain C1018 steel. Tensile strength is 82,000 psi. Rockwell hardness is B85. Tolerances: *Undersized:* –.002″; *Oversized:* +.002″. Length tolerance is –.030″.

Metric Machine Keys

DIN 6885A. Made from plain C1045 steel with rounded ends. The square size tolerance is –.030 mm. Length tolerance is –.200 mm for all sizes, except the 6 mm sizes in 30 mm, 36 mm, and 40 mm lengths, which are –.300 mm. Tensile strength is 110,000 psi. Rockwell hardness is B97. Package quantity is 25, unless noted.

Galvanized steel has excellent rust and weather resistance.
Monel is resistant to corrosion, especially from salt water, and may be mildly magnetic.
Stainless steel is corrosion resistant and may be mildly magnetic.
High-carbon galvanized steel is a durable, general purpose steel.

Find your stapler brand name and model number to see which staple group it fits.
Then go to that staple group key letter in the first column in the table on the following page and choose leg length.

Electric Staplers

Choose these staplers when speed and continuous use are essential. To drive a staple, either touch the work surface then pull the trigger or pull the trigger then touch the work surface. You can drive additional staples without lifting the stapler, so it is ready for immediate use. They do not clinch the staple.

Style 1 has a plastic housing and includes a 10-ft. power cord with three-prong plug. Furnished in a 10"×8"×3½" plastic carrying case. UL and C-UL listed.

Style 2 has a magnesium housing with steel base and includes a 12-ft. power cord with three-prong plug. It is self-lubricating and has a nose design that allows quick jam clearing. Furnished in a 13"×10"×4" plastic carrying case. UL listed.

Cordless Stapler

All the benefits of an electric stapler without the constraints of a cord. This stapler has a flush front so you can easily maneuver into tight corners. Comes with a depth of drive control and an LED light to indicate when the stapler is ready to fire again. Stapler sets approximately 1,500 staples on a single charge; it does not clinch the staple. Housing is high impact plastic. Stapler has a safety trigger lock and includes a 10.8 volt rechargeable battery pack and a 60-minute battery charger. Furnished in a 15"×13"×3 15/16" plastic carrying case. UL listed.

Staplers

For staples, see pages 3364-3365. For brad nails, see page 3369.

Air-Powered Staplers

Known for their durability, these staplers have a rugged aluminum housing. To drive a staple, hold the nose against the work surface and then pull the trigger. Tools do not clinch the staple. ***Style 3*** has an anti-jam mechanism in the magazine.

Connections: NPT female.

	Staple Wd.	Staple Leg Lg.	Staple Cap.	Air Inlet	Operating Pressure, psi	O'all Size, Lg. × Ht.	Wt., lbs.	Uses Staple Group

Economy Air-Powered Stapler

Just like most manual staplers, this air-powered model works with 3/8″ wide staples. To drive a staple, either hold the nose against the work surface then pull the trigger or pull the trigger then touch the work surface. You can drive additional staples without lifting the stapler, so it is ready for immediate use. Does not clinch the staple. This stapler has an aluminum alloy housing and is furnished in a 11 1/2″ × 9″ × 2 1/4″ plastic carrying case.

Connections: NPT female.

Air-Powered Stapler for Upholstery

Stapler has a lightweight aluminum housing. It will not clinch the staple.

To drive a staple, hold the nose against the work surface then pull the trigger; you can drive a second staple without lifting the stapler. Furnished in a 11 1/2″ × 9 1/2″ × 2 1/4″ plastic carrying case.

Connections: NPT female.

Hammer Staplers

Staple Groups J, K&N

Staple Group L

Balanced for one-handed use, these hammer staplers reduce fatigue and drive staples as fast as you can swing them. Use at arm's length, overhead, or at floor level. Staplers are made of steel and have heavy duty machined jaws to help prevent jamming plus quick and easy back-end loading; they do not clinch the staples.

Manual Staplers

Staple Group J

1

Staple Group J

Outward Clinch

2

Staple Group L

3

You can depend on these classics for any stapling job in your plant. ***Standard drive*** staplers are steel with a chrome finish and have a see-through refill window. *Style* 1 does not clinch; it is furnished alone or as a kit. The kit is packed in an 8½″×6¼″×2¼″ plastic case and includes the stapler, 1,250 starter staples, a staple lifter, and nose attachments for stapling screens and wires. *Style 2* provides an outward clinch, which is ideal for surface-tacking jobs, such as installing fiberglass installation around duct work.

The ***adjustable drive*** stapler lets you select a power setting for the best drive depth. It also has a handle stop, built-in jam clear mechanism, adjustable power knob for drive depth, and hold-down storage clip. Made of steel with a bright-nickel finish, it does not clinch the staple.

Manual Clinch Staplers

The tongue on these plier-type staplers holds the material while you staple. Plus they have cam-actuated double leverage so they're easy to squeeze, reducing operator fatigue. Staplers are made of steel with a chrome finish. Staples clinch inward.

Heavy duty stapler with spear point penetrates the edges of corrugated containers to seal them from within.

Manual Stapler/Brad Nailer

The ergonomic design positions your hand up front to eliminate kickback and drive staples and nails deeper. This stapler has a staple indicator for precise positioning and a see-through refill window. Made of steel with a brushed silver-gray finish and a rubberized grip. Nailer does not clinch staples.

F-K

Plain steel is made of general purpose low-strength steel.
Galvanized steel offers excellent protection against rust and weather.
18-8 stainless steel has excellent corrosion resistance. May be mildly magnetic.

Type 316 stainless steel contains molybdenum for even better corrosion resistance than 18-8 stainless steel. May be mildly magnetic.
Finishing nails and ***brad nails*** have small, discreet heads that are easy to conceal. Finishing nails have a thicker shank than brad nails. Length is measured from the top of the head.

Find your nailer brand name and model number to see which nail group it fits. Then go to that nail group and choose from those listed.

▲ Head is round. ■ Has a ring shank. ★ Head is painted brown. ● Head is painted white.

Nailers & Hog Rings

For nails, see pages 3368-3369.

Air-Powered Angled Framing Nailers

Nail Groups AA & A

An angled magazine provides balance and allows for maneuvering into tight spaces. Nailers have a sequential trigger so each time you drive a nail, you must hold the nose of the tool against your work surface. Tools have a lightweight, rugged cast housing and adjustable nail-depth control. Connections: NPT female.

Nail Size	Nail Lg.	Nail Capacity	Air Inlet	Operating Pressure, psi	O'all Size, Lg.×Ht.	Wt., lbs.	Uses Nail Group		
For Full Round-Head Nails; 21° Angled Strip									
8d-12d	2″-3½″	80	¼″	80-100	21½″×14¼″	8.4	AA	**96384A210**	$333.55

Paslode Cordless Angled Nailers

Nail Group B — Framing

Nail Group E — Finishing

Nailers are powered by a disposable fuel cell and a rechargeable battery for complete freedom from cords, hoses, and compressors. Nailers have a sequential trigger so the operator must hold the nose of the tool against the work surface before pulling the trigger. This action must be repeated each time the tool drives a nail. They have a plastic housing, an adjustable drive depth, and a built-in belt hook. Plus they come with a 6-volt NiCad battery, battery charger, safety glasses, and a 19″ Lg.×19″ Ht.×5″ Dp. plastic carrying case. Fully charged battery sets about 4,000 nails; one fuel cell sets about 1,200 nails. Nails and fuel cells are sold separately. ***Angled finishing nailer*** gives you easy access to corners and tight spots. Includes a nonmarring tip.

	Nail Size	Nail Lg.	Nail Cap.	O'all Size, Lg.×Ht.	Wt., lbs.	Uses Nail Group	Nailers		Fuel Cells Pkg. Qty.

Air-Powered Coil-Fed Framing Nailer

Nail Group C

When repeated reloading would hamper your productivity, this lightweight, quick-loading, high-volume tool delivers. Nailers have a sequential trigger so the operator must hold the nose of the tool against the work surface before pulling the trigger. This action must be repeated each time the tool drives a nail. Includes a kit to convert it to contact trigger nose, which allows you to depress the trigger at the same time the nose is placed against the work surface. The nailer has an aluminum housing and a rubber hand grip. Connections: NPT female.

Nail Size	Nail Lg.	Nail Capacity	Air Inlet	Operating Pressure, psi	O'all Size, Lg.×Ht.	Wt., lbs.	Uses Nail Group

Brad Nailers

Nail Group G — Air Powered

Nail Groups G & H — Electric

Use these powerful brad nailers for a variety of applications. Nailers have a sequential trigger so the operator must hold the nose of the tool against the work surface before pulling the trigger. This action must be repeated each time the tool drives a nail. ***Air-powered nailer*** has a selectable trigger that also allows conversion from sequential mode to contact mode. Also has a durable magnesium housing, a molded-in rubber grip, and comes in a 11.8″ Lg.×12.2″ Wd.×4.6″ Ht. plastic carrying case. Connections: NPT male. ***Electric nailer*** has a plastic body with a comfort-grip handle, a safety trigger, and a nonmoving nosepiece. Comes in a 14″ Lg.×10¾″ Wd.×3¼″ Dp. plastic carrying case. Includes a 9½″ cord with three-prong plug and operates on 120 VAC, 60 Hz. *Note:* Use only with 12-ga. extension cord with a three-prong plug.

18	5/8″-1¼″	100	—	—	9″ ×8½″	4.25	G or H	**5903A42**	89.67

Compact Air-Powered Nailer

Fits in the palm of your hand and can be used in any position. The nailer drives the nail and stops when the nail is set. Has a magnet in the guide to hold the nail for one hand operation. Sets 5d-70d common nails, weighs 2½ lbs., runs on 2-4 cfm of compressed air, operates on 70-100 psi. Connection: ¼″ NPT female.

6078A35 ..... $57.86

Hog Rings and Pliers

Ideal for sack closure, for tagging, and for repairing fences. Rings are made from 12½-ga. (0.099″) steel wire with a rust-resistant copper coating. Use the optional hog-ring pliers to make closing hog rings easier. Pliers are malleable steel and 6⅝″ long.

Hog Rings

About Nails

Aluminum—Resistant to chemical and atmospheric corrosion. ***Stainless Steel***—Excellent corrosion resistance. ***Copper*** and ***Brass***—Decorative and corrosion resistant. ***Steel***—*General purpose, zinc plated,* and *galvanized* provide rust resistance. Package quantity for nails is approximate.

Common Nails

Our most popular framing nails have a larger shank to provide greater resistance to bending.
Also Available: Plain steel common nails in 5-lb. packages. Please ask for 97801A100 and specify size.

For information about nails, see page 3371.

Small Finishing Nails

Brad Nail

Wire Nail

Nails are steel with a slender shank to minimize wood splitting.
Brad nails are a smaller version of finishing nails. Head is driven below the surface and puttied over.
Wire nails have a flat head and thinner shank than common and box nails.

Easy-Drive Screw Nails for Thin Material

Also known as flat head Type 21 screws, they fasten fabric, fiber, leather, and cardboard to sheet metal. Drive like nails yet hold like screws. Made of zinc-plated steel for good rust resistance, nails can be used with either drilled or punched holes. Length is measured from under the head. Packaged in quantities of 100.

McMASTER-CARR®

For information about nails, see page 3371.

Extra-Wide Head Nails

An extra-wide head gives increased holding power and reduces pull through. Use for roofing and sheathing applications. Nails are 11 gauge (0.120″).

Galvanized steel nails are for use with asphalt shingles, roofing felt, and insulation board. Head dia. is 7/16″. **Also Available:** 5-lb. packages. Please ask for 97850A100 and specify size. ***Copper*** nails (also known as slating nails) are more corrosion resistant, softer, and easier to cut than galvanized steel, so they're easier to replace. Head dia. is 3/8″.

Nail-In Staples

Use these staples to attach wire and cable to wood.

Steel Staples—Choose plain or zinc-plated steel.

Insulated Steel Staples—Come with a paper insulator, except 97910A240 which has a polyethylene insulator. Those for low-voltage wire can be used for bell, thermostat, and phone wire.

Plastic Staples—Black plastic body with galvanized steel nail. Can also be used in plaster, stucco, and masonry.

Saddle Staples—Polyethylene body with two zinc-plated nails.

Wire Staples—Also known as fence staples. Made of galvanized steel.

Plastic-Welding Kits

Variable-Output Fabrication Kit with Built-in Compressor

Combination Tip

High-Speed Tip

Using hot air, these kits weld any thermoplastic (PVC, polycarbonate, polyethylene, polypropylene, HMW/UHMW, CPVC, Kynar, and ABS). Use with the Plastic-Welding Rods sold separately on this page. Kits include a welding torch, a 12-ft. air hose with a 1/4″ NPT male fitting, an air regulator, a pressure gauge, a 6-ft. cord with three-prong plug, and a plastic carrying case except 7885A12, which has a steel and plastic case. Operate on 120 VAC.

Fabrication Kit— Includes a 450-watt heating element (700° F @ 3 psi) and a combination tip for making continuous welds and small dot-like welds (tack welds) to prepare materials for later continuous welds. Air compressor not included. Can also be used with nitrogen gas when welding polyethylene or polypropylene to prevent possible oxidation (air bubbles).

Variable-Output Fabrication Kit— Includes 450-watt, 550-watt, and 650-watt heating elements (range is 700° to 880° F @ 3 psi); a tip for making continuous welds; a tip for making small dot-like welds (tack welds) to prepare materials for later continuous welds; and a combination tip that does both. Air compressor not included. Can also be used with nitrogen gas when welding polyethylene or polypropylene to prevent possible oxidation (air bubbles).

Variable-Output Fabrication Kit with Built-in Compressor— Includes a built-in air compressor that produces 2 1/2 cfm at 3 psi. Also includes 450-watt and 550-watt heating elements (range is 700° to 800° F @ 3 psi) and a combination tip for making continuous welds and small dot-like welds (tack welds) to prepare materials for later continuous welds.

Optional high-speed tips heat the welding rod and the materials being welded at the same time to make faster, more uniform welds.

Plastic-Welding Rods

Choose the rod material that is the same as the material you are welding. *PVC Type I* is rigid; *PVC Type II* is more pliable and has a higher impact strength. **Also Available:** 5-lb., 10-lb., and 15-lb. coil sizes. Please ask for 7889A11 and specify the McMaster-Carr part number for the material, color, and diameter and the coil weight you need.

Rod Material	Coil Size	Color	1/8″ Diameter Coil Lg., ft.			5/32″ Diameter Coil Lg., ft.			3/16″ Diameter Coil Lg., ft.

Welding Inspection Gauges

Weld-Alignment Gauge

Gauge has inch markings on one side and millimeter markings on the other. It's stainless steel and 6 1/4″×2 1/2″.

Measures:
- 37 1/2° bevel angles.
- Internal misalignment of pipe ID.
- Pipe wall thickness after tack welding.
- Alignment and length between scribe lines to 16ths of an inch.
- Fit/gap on butt welds after alignment.
- Go and no go between 1/16″ and 3/32″ (see page 2289 for information on go/no go).
- Corner, or fillet, weld size on socket welds.
- Crown height of butt welds.

8970A11 ..... $123.66

Multicheck Weld Gauge

Gauge has scales graduated in inches (to 16ths) and millimeters. It's stainless steel and 4″×2 3/4″. Includes a plastic carrying case.

Measures:
- 0° to 60° bevel angles.
- Misalignment.
- Excess weld metal (capping size).
- Length of a corner, or fillet, weld leg to 1″ and throat to 3/4″.

7871A11 ..... $65.60

Corner-Weld Gauge

Also known as a fillet gauge, this gauge measures 14 of the most popular concave and convex corner, or fillet, weld dimensions from 1/8″ to 1″ in both inches and millimeters. Gauge is stainless steel and 4″×1 1/4″. Includes a plastic carrying case.

7928A11 ..... $35.31

Welders' Antispatter

Keep weld spatter from sticking to welding nozzles, electrode holders, positioners, fixtures, and clamps. All resist heat and protect metal.

Spray— Ideal for contact tips, welding nozzles, and electrode holders.

Nozzle Tip Dip— Dip MIG gun nozzles into can. Can also be brushed on.

Brush On— Paste for heavy duty applications.

	Size		
Spray	11-oz. Aerosol Can	7881A61	$7.39
Nozzle Tip Dip	16-oz. Plastic Jar	77435A28	5.49
Nozzle Tip Dip	16-oz. Metal Can	77435A25	6.16
Brush On	1-gal. Plastic Can	7881A71	42.98

Welding Positioners

Designed for rotary workholding and positioning, these compact units have a forward and reverse switch, a foot pedal with on/off control, speed control, a grounding stud, and a turntable with slots for mounting jigs. Operate on 115 VAC, 60 Hz (unless noted).

The *5″ dia. table* has three 1/4″ Wd. × 1″ Lg. positioning slots and a 5-ft. long power cord with three-prong plug; the *9″ dia. table* has four 3/8″ Wd. × 2 3/4″ Lg. slots and a 10-ft. long power cord with three-prong plug; and the *10″ dia. table* has four 3/8″ Wd. × 3 1/4″ Lg. slots and a 5-ft. long power cord with three-prong plug.

Note: Do not exceed the maximum load capacities listed in the table below.

Optional ***3-jaw chucks*** allow inside and outside clamping. To mount the chucks, you'll need to drill three holes in the positioner table. See pages 2596-2597 for hold-down clamps.

10″ Dia. Positioner

♠ Load capacity is determined in horizontal position, it is reduced as tables are tilted. ■ Operates on 50/60 Hz.

Weld Clamping Plate and Accessories

Clamping Plate and Stand

Speed production, save setup time, and reduce the need for building workholders. Load capacity is 4 tons. Made of gray cast iron, the top surface and side ledges are machined to within 0.005″ of flatness per linear foot. It has 1 3/4″ square holes spaced 3 1/2″ center-to-center. Size is 2 1/2 ft. × 5 ft.

Stand is steel and holds the clamping plate 30″ from the floor. Has 7/8″ dia. mounting holes for mounting to the floor.

Clamping Plate Wt., lbs.			Stand Wt., lbs.		
850	7891A68	$2,027.03	180	7891A69	$604.80

Welding Backup Plates

Also known as carbon plates, these high-density burn-resistant graphite plates are used as a backing for arc and gas welding, for making vertical welds, and as a dam or mold for repairing broken or missing machine parts and gear teeth. Cut plates to the desired size and shape with any saw or cutting tool.

Thickness	6″ × 12″ Plates		12″ × 12″ Plates	
1/4″	7971A11	$20.41	7971A12	$38.10

Welding-Rod Carriers

Leather Carrier— Has a double-reinforced bottom and a spring clip. Holds rods up to 14″ long. Includes belt clip.

Plastic Carrier— Resists impact and includes an airtight, watertight, twist-off cap. Holds rods up to 14″ long. Includes belt clip.

Wall Bracket— Lets you hang three plastic carriers on the wall. Size is 5 1/2″ Ht. × 12″ Wd. × 4 1/2″ Dp.

Leather *Plastic*

	Cap., lbs.		
Leather Carrier	3.5	7998A11	$9.13
Plastic Carrier	10	80005A11	12.24
Wall Bracket	30	80005A12	16.84

Welding-Rod Ovens

Keep your rods dry and in prime condition. Ovens are made from heavy-gauge steel with a painted, high-gloss blue finish. They hold rods up to 18″ long and have an 8-ft. cord with three-prong plug, except 7876A15, which does not include a plug. CSA certified.

Portable oven is the perfect size for protecting rods during transfer from the holding oven to the job. Comes set to operate at 120 VAC.

Bench top ovens are compact ovens for optimum storage of rods in your shop.

(H) Has a thermostat factory set at 275° F and can be adjusted from 150° to 300° F.

(J) Has an adjustable thermostat dial with a range of 100° to 300° F.

(K) Has an adjustable thermostat dial with a range of 150° to 550° F.

Quick-Action Cable Connectors

Give your welding set-up greater versatility with these temporary connectors that allow for quick changes. Male connector locks into the female connectors. All internal components are brass.

Male and Female Cable Connectors— Have an oil- and temperature-resistant, black molded-plastic cover. To attach cable, just tighten the screws with a 1/4″ hex key wrench.

Lug-Style Female Connectors— Connect and disconnect welding cable at the power source. Attach one end to a cable with a male connector (7841A14, A16, and A22) and the other to the stud on your welding power source. Include a nylon cover and a 17/32″ stud hole.

Welding Cable

This extremely flexible cable delivers up to 600 volts of power and resists oil, flame, heat, and abrasion.

Standard Cable— Jacket is EPDM rubber with Class K 30 AWG copper stranding. Temperature range is –58° to +221° F (–50° to +105° C).

Heavy Duty Cable— This cable resists solvents and is more resistant to weather than standard cable. Jacket is chlorinated polyethylene with Class M 34 AWG copper stranding. Temperature range is –58° to +194° F (–50° to +90° C). Color is high-visibility orange. MSHA (Mine Safety and Health Administration) approved. UL listed. CSA certified.

Also Available: Other lengths up to 250 continuous feet.

How to determine proper cable size— Read across the table to determine your standard and heavy duty cable sizes. For example, a circuit with a total length of 150 ft. at 150 amps would require a 2/0 standard cable or a 2 heavy duty cable. For voltages under 600 volts only.

Note: 6 AWG cable size has a maximum length of 50 ft. at 50 power source amps and a maximum length of 75 ft. at 25 power source amps.

Grounding Clamps

(A) Magnetic Clamps— Powerful magnets hold ground cable to ferrous metal. Clamps have a 3½″ dia. heavy duty steel housing, a 5⅛″ long handle, and a bolt-and-nut cable connection with a ½″ stud. Stud is brass on *250-amp style* and copper on *800-amp style*.

(B) Magnetic Clamps with On/Off Switch— Just flip a switch to turn the magnet on or off. Made of steel. Clamps have a bolt-and-nut cable connection with a ½″ stud. The *300-amp style* measures 2½″ Ht. × 1½″ Wd. The *600-amp style* measures 2½″ Ht. × 2¾″ Wd.

(C) C-Clamps— Made from CDA-836 brass. Clamps have a threaded drive for strong contact. The *300-amp style* includes a detachable male and female cam-action cable connector. The *600-amp style* has a double oval-point screw cable connection.

(D) Spring Clamps— Jaws are 98% copper alloy and the hinge pin is copper, so both jaws carry current. Clamps feature an extended jaw lip for easy clamping and a support ring to prevent cable strand breakage. They have a ball-point screw cable connection.

(E) Light Duty Spring Clamps— Made from steel, these clamps have a bolt-and-nut cable connection and a cable support. The *300-amp style* has a 5/16″ stud bolt. The *500-amp style* has a ½″ stud bolt and a braided copper shunt that lets both jaws carry current.

Retractable Reels for Welding Cable

Keep welding cable out of the way. These reels are cast aluminum and have a self-winding spring that retracts the cable after use. Cable locks in place when pulled out; give it a quick pull to rewind it. Include a four-roller guide that prevents cable from tangling and an adjustable guide arm that holds the cable in position. Size is 14½″ Ht. × 13½″ Wd. For use indoors and out.

Cable Size	Cable Lg.	Max. Amp Rating		
Reels with Cable				
1	50 ft.	250	7833A62	$1,031.27
1/0	40 ft.	350	7833A61	1,045.51
Reel without Cable				
—	▲	375	7833A65	775.92

▲ Maximum reel capacity is 50 ft. for cable sizes 2 and 1; 40 ft. for cable sizes 1/0 and 2/0.

Reel with Cable

Spot-Welding Electrodes

Use these Class 2 alloy (copper chromium) electrodes with electric resistance spot welders in production operations. All have tapered shanks for easy press-fit installation and meet RWMA (Resistance Welding Manufacturers Assn.) standards. ***Point-faced tips*** are best for tight areas or for a small weld. ***Flat-faced tips*** create a larger weld and can be used when appearance is not important.

Spot-Welding Electrode Cleaner

Use this ratchet-style tool to clean (dress) and shape upper and lower electrodes without disassembly. Works with No. 4 and No. 5 RWMA (Resistance Welding Manufacturers Assn.) taper electrodes and dome-nose electrodes. Cleaner is 8″ Lg. × ¾″ Wd. with a 1¼″ wide head.

Complete Tool	7821A11	$86.40
Replacement Cutter	7821A12	70.61

Cable Lug Cover

Protect against accidental contact with other welding connections. Simply slide the soft PVC cover up and over the lug and cable, then pull it back over the completed connection. Fits cable sizes 6 through 4/0 and both straight and angled lugs.

7828A11 ..... $10.56

Stud Welding System

Weld up to ¼″ dia. threaded studs and unthreaded pins to thin metal without marring or distortion. For steel and stainless steel. Includes a control unit with 20-ft. power cord and three-prong plug; a welding gun with 21-ft. cable; collets for 6-32, 8-32, 10-24, and ¼″-20 studs; and a 16-ft. ground cable with two grounding clamps. Operates on 115 VAC, 60 Hz, 10 amps. Size is 9¾″ Ht. × 7¼″ Wd. × 16½″ Dp.

Collets must be the same size as the stud or pin you are welding and are not interchangeable with studs from other systems.

Threaded studs and unthreaded pins can be used for most fastening applications.

Also Available: 12- and 10-gauge unthreaded pins in 1″ to 6″ lengths for installing insulation and acoustical lining. Please ask for 7845A81 and specify gauge and length.

Portable Resistance Spot Welders

Resistance welding is faster than arc welding and brazing and may be preferred over riveting and screwing. Use this welder to spot weld mild, galvanized, and stainless steel; not designed for use with aluminum, copper, or copper alloys. Welders are air cooled and can be used left- or right-handed. Include 6″ tongs with ⅜″-24 threaded welding tips that hold and weld metal pieces together. Tongs in other lengths are sold separately. Throat height is 3½″ for all tongs when closed. 7870A32 has a 10-ft. long power cord with three-prong plug; 7870A34 has a 10-ft. long power cord without a plug.

Note: Welding capacities below are based on the total thickness of multiple sheets of uncoated mild steel when using 6″ tongs. Capacities are slightly reduced when welding galvanized steel and stainless steel and when using 12″ or 18″ tongs.

Spot Welders—Operate on 50/60 Hz, single phase.

Input Volts	Input Amps	Welding Cap.	Output, kVA ♦	Wt., lbs.		
110 VAC	30	⅛″	1.5	22	7870A32	$763.17
220 VAC	30	3/16″	2.5	30	7870A34	863.68

♦ Rated for 5 minutes on and 5 minutes off using 6″ tongs.

Lincoln Arc Welders

Welders include an 11-ft. No. 4 welding cable with insulated rod holder, an 8-ft. No. 5 welding cable with ground clamp, and a 7-ft. power cord with NEMA 6-50 plug. Both weld 16-gauge and thicker metals. Rated for two minutes on and 8 minutes off. Operate on 230 VAC, 60 Hz, single phase. Size is 24″ Ht. × 17¼″ Wd. × 12″ Dp. UL listed.

Lincoln K-1170 225-Amp AC Welder— For general fabrication, equipment modification, and repairs. Rated for 50 input amps. Weighs 109 lbs.

Lincoln K-1297 225/125-Amp AC/DC Welder— A built-in polarity switch lets you select AC, DC positive, or DC negative welding. AC is rated for 50 input amps and DC is rated for 36. Weighs 124 lbs.

Wheel Assembly— Easily installs on welders for mobility. Includes two 6″ dia. wheels, an axle, and hardware.

Lincoln No.	Output Volts	Output Amps		
K-1170	25	225 (AC)	7967A33	$364.21

Arc-Welding Rods

Get excellent arc stability, speed, and performance with these high-quality flux-coated welding rods (electrodes). Rods are 12″ to 14″ long (unless noted). **To Order:** Please specify package size from the quantities listed in the tables below.

Mild Steel Welding Rods

Pipe Welding (E6010)—DC electrode positive. For welding pipe and for general structural fabrication.

Vertical/Overhead (E6011)—AC/DC electrode positive. Fast solidifying allows for vertical and overhead welding.

All Purpose (E6013)—AC/DC electrode positive and negative. For mild steel fabrication and a superior bead appearance.

High Speed (E7014)—AC/DC electrode positive and negative. For high-speed welding with outstanding bead appearance and slag removal.

Inspection Quality (E7018)—AC/DC electrode positive. Low hydrogen for X-ray quality welds and high tensile strength.

Inspection Quality (E7018AC)—AC/DC electrode positive. Similar to E7018 above, but designed for optimum performance when used with an AC power source.

Fast Deposit (E7024)—AC/DC electrode negative. Rods deposit quickly on welds making them ideal for high-speed single-pass welds with easy slag removal and shallow penetration.

Stainless Steel Welding Rods

All Purpose (E308L)—AC/DC electrode positive. For welding Types 201, 202, 301, 302, 304, 305, and 308 stainless steel.

Type 309 (E309L)—AC/DC electrode positive. For welding heat-resistant Type 309 stainless steel and other stainless steel where pre- and post-heat treatment aren't possible. Also for joining dissimilar metals.

Type 316 (E316L)—AC/DC electrode positive. For welding Type 316 stainless steel and food-processing equipment. Also makes high-temperature corrosion-resistant welds on molybdenum-bearing steels.

Specialty Welding Rods

Nickel (ENi-CI [Ni 99])—AC/DC electrode positive. Rods are 91.5% pure nickel for machinable welds joining cast iron, mild steel, and stainless steel to themselves.

Cast Iron (ESt [Castarc])—AC/DC electrode positive and negative. Rods are iron for making nonmachinable welds on cast iron.

Gray Cast Iron (ENiFe-CI [Ni 55])—AC/DC electrode positive. Use for joining gray iron, ductile iron, malleable iron, and alloy cast iron to themselves, to each other, and to mild steel.

Copper Based (ECuSnC/Phosphorus Bronze C)—AC/DC electrode positive and negative. Weld in flat positions. For metallic carbon arc welding of brass, bronze, and copper to themselves and to mild steel, stainless steel, and cast iron.

Aluminum (E4043)—DC electrode positive, reverse polarity. For arc welding on aluminum alloys 3003, 3004, 5052, 6061, and 6063.

Surface Repair—AC/DC electrode positive. Rods are multipurpose for preventing wear and for repairing worn parts. Rockwell hardness is C57-C61.

Multi-Material—AC/DC electrode positive, reverse polarity. For welding all steels including tool and stainless.

Cutting/Chamfer—AC/DC electrode negative. Designed for cutting all grades of steel including stainless and cast iron.

♣ Rods are 14″ to 18″ long.

Arc-Welding Rod Holders

Standard

Big Grip

Stub Grip

Get a grip on your arc-welding rods (electrodes). All holders have a fully insulated body.

Standard—Jaws are copper alloy for maximum conductivity and strength.

Big Grip—Easy to use and allow greater hand clearance than standard holders. Jaws are copper alloy.

Stub Grip—It grips the welding rod closer to the end, which lets you use up to 2″ more of the rod than with standard and big-grip holders. Plus, it has an angled head for better control. Includes a high-impact replaceable head. Jaws are steel.

Air Carbon-Gouging Electrode Holders

Make weld removal, edge preparation, gouging, and repairs easier. These holders have a 15° angle that allows you to maintain normal wrist and arm movements for maximum comfort. Include a bolt-down lug with a 17/64″ dia. hole for connection to a power source and 3/8″ NPT female threads for connection to an air compressor. Also include a cable that swivels 360°. Use with the Air Carbon-Gouging Electrodes on this page.

Lincoln Easy-MIG 140 Welder

Compact and easy to use, this welder can be used with flux-core and solid-core wire. Welds 24-ga. to 10-ga. mild steel and uses 0.025″-0.035″ solid wire and 0.030″-0.035″ flux-core wire. Includes a 10-ft., 8-ga. ground cable with clamp; an argon-mixed gas regulator for MIG welding; a hose; a 2-lb. spool of 0.025″ solid wire; a 1-lb. spool of 0.035″ flux-core wire; contact tips; a gas nozzle for MIG welding; a gasless nozzle for flux-core welding; and a face shield. Welder is rated for 2 minutes on and 8 minutes off. Operates on 120 VAC, 60 Hz, single phase, 30-140 amps; includes an 8-ft. power cord with a three-prong plug. Size is 14″ Ht. × 10 1/8″ Wd. × 18 5/8″ Dp. Weight is 58 lbs. Requires a shielding gas (not included) for MIG welding.

Optional utility cart holds a welder, a gas cylinder, and tools. Has a handle, front casters, and rear wheels. ***Optional aluminum welding kit*** includes gun with spool mount, a spool of 0.035″ aluminum alloy 4043 wire, contact tips, an electric harness with toggle switch, and a carrying case.

Steel

All Purpose (ER 70S-6)— For low-carbon steel. Ideal for scaled, rusty, and oily plates.

High Porosity (ER 80S-D2)— For mild steel when porosity or high sulfur or carbon content is a concern.

Fast Deposit (E70C-6M)— A high-productivity wire that provides faster welding speeds, low fumes, and clean welds.

Vertical/Overhead (E71T-1)— Fast solidifying for vertical and overhead welding. Requires a shielding gas.

Thin Gauge (E71T-GS)— Great for thin-gauge galvanized and mild steel.

Surface Repair (55 FC-0)— This hard and durable multipurpose wire is designed to prevent wear and repair worn parts.

Stainless Steel

General Purpose Solid Core (ER 308L)— For Types 301, 302, 303, 304, 304L, 308, 308L, 312, and 347 stainless steel. Resists impact and abrasion.

General Purpose Flux Core (ER 308L FC-0)— For Types 301, 302, 304, and 308 stainless steel.

Stainless Steel/Mild Steel (ER 309L)— For joining Type 309 stainless steel to base metals. Also recommended for Type 304 stainless steel to mild steel and for overlay work.

Type 316 Stainless Steel (ER 316L)— For Type 316 stainless steel. Has molybdenum for strength in high-temperature applications, resistance to weld deposits, and resistance to pitting caused by corrosive liquids.

Additional Metals

Aluminum (ER 4043)— For aluminum alloys 3003, 3004, 5052, 6061, and 6063, and casting alloys 43, 355, 356, and 214.

Hard Aluminum (ER 5356)— Similar to ER 4043, but it's harder and can be anodized. For aluminum alloys 5050, 5052, 5083, 5454, and 5456.

Cast Iron (NI 55)— For joining cast iron to itself and to other metals.

Silicon Bronze— For silicon bronze and copper.

MIG Torch Light

Stop guessing where to start welding. This LED light attaches to your MIG gun to illuminate the area so you know exactly where to weld—even while wearing dark welding lenses. It has a flexible mounting bracket that attaches to ½″ to ¾″ dia. gun necks, a lens cover to protect LED from spatter, and auto shut-off. Operates on one AAA battery (included).

Torch Light **7741A77** $28.49
Repl. AAA Battery **14715T101** $0.79

MIG Welding Pliers

Handle multiple jobs with just one tool—remove weld spatter from nozzles; install/remove contact tips and nozzles; cut wire; draw out wire; and tighten/loosen fittings, nuts, and bolts. Also use as a chisel, hammer, and long-nose pliers. Pliers are high carbon steel, spring loaded, and have cushion-grip handles. Measure 8″ long.

79405A65 ..... $14.37

Welding Wire Cleaning and Lubricating Pads

Cleaning Pad

Improve wire feed and reduce weld spatter. Use ***cleaning pads*** with all types of wire. Color is red. ***Lubricating pads*** have a lubricant that allows wire with poor surface finish and rust to feed smoothly. Color is black.

Cleaning Pads (6/Pkg.) ..... **1664K1** **Pkg.** $9.20
Lubricating Pads (6/Pkg.) ..... **1664K2** **Pkg.** $10.50

Spool Keeper

Ensure high quality welds by protecting your welding wire from humidity and corrosion. This high-impact plastic case holds up to five 4″ dia. spools of wire. Size is 9½″ Lg. × 4¼″ Ht.

7684A11 ..... $14.18

MIG Guns

Plug Styles

A	A	B	C	C
160 Amps	*250 Amps*	*160 Amps 250 Amps*	*160 Amps*	*250 Amps*

Guns plug into your MIG welder and include contact tips and nozzles.

160-Amp Guns—Comparable to Tweco Mini MIG guns, these light duty guns are rated 6 minutes on and 4 minutes off using CO_2 gas. Use with 0.023″ to 0.035″ diameter wire.
Style A fits Thermal Arc Fabricator 130-180 and Hobart Handler.
Style B fits Millermatic 135, 175, 210, 251, and 300.
Style C fits Lincoln SP100 and SP130.

250-Amp Guns—Comparable to the Tweco Spraymaster series, these guns are rated 8 minutes on and 2 minutes off using Argon/CO_2 gas. Use with 0.035″ to 0.045″ diameter wire.
Style A fits Lincoln Power MIG 250, 255, and 300, SP 100, SP 130, and Weld-Pak 150; Hobart 19, 2000, 2200, 2210, 2400, 2410, Hefty, Porta Wire, Beta MIG 83, and MIG Man.
Style B fits Millermatic 135, 175, 210, 251, and 300.
Style C fits Lincoln LN4, LN7, LN8, LN9, and SP200.

Tungsten Electrodes

Electrodes have a ground finish for a close fit in TIG torch collets. They're 7″ long and conform to AWS (American Welding Society) standards. Package quantity is 10.

General Purpose (2% Thoriated Tungsten)—Provide excellent arc stability. For welding stainless steel, carbon steel, nickel alloys, and titanium. Use with an AC or DC power source. Tip is red.

Wear Resistant (1.5% Lanthanated Tungsten)—Have a reduced rate of vaporization or burn off. For welding stainless steel, carbon steel, nickel alloys, and titanium. Use with an AC or a DC power source. Tip is gold.

Easy Start (2% Ceriated Tungsten)—Provide an easier start, excellent arc stability, and a reduced rate of vaporization or burn off. For welding stainless steel, carbon steel, nickel alloys, and titanium. Use with an AC or a DC power source. Tip is orange.

Aluminum and Magnesium (Pure Tungsten)—Weld aluminum and magnesium alloys. Use with an AC or a DC power source. Tip is green.

TIG Welding Rods

ER 70S-2 Mild Steel—Rods are copper coated. For welding all grades of mild and carbon steel, even over rust and scale.

ER 308L Stainless Steel—For AISI 200 and 300 series stainless steel up to and including Type 308L stainless steel.

ER 312 Stainless Steel—For joining dissimilar ferrous metals.

ER 316L Stainless Steel—For Type 316 and Type 316L stainless steel. Excellent corrosion resistance.

ER 4043 Aluminum—For aluminum alloys 3003, 3004, 5052, 6061, 6063, and casting alloys 43, 214, 355, and 356.

ER 5356 Aluminum—For aluminum alloys 5050, 5052, 5083, 5356, 5454, and 5456.

Ni 99 Cast Iron—For machinable welds on cast iron.

ERTi 2 Titanium—For titanium.

ERAZ 61A Magnesium—For magnesium sheets and extrusions.

ERAZ 92A Magnesium—For cast magnesium alloys.

Grinder for Tungsten Electrodes

Keep your electrode tips ground at the proper 20° angle to ensure high quality welds. It has a double-sided diamond grinding wheel and includes collets for 1/16″, 3/32″, and 1/8″ electrodes, a hex key, and a plastic case. Operates on 120 VAC.

Grinder	7652A51	$252.57
Repl. Diamond Wheel	7652A64	37.50

Lincoln TIG Welder

Welder with Optional Cart

This welder can be used for TIG and arc welding and is perfect for welding thin material. You can select AC or DC amperage. Output range is 5 to 225 amps AC/DC.

Welder includes 12½-ft. welding cable with TIG torch, 12-ft. ground cable with ground clamp, gas regulator and hose, foot-pedal control, and 9-ft. power cord with three-prong plug. Requires a cylinder of shielding gas (not included) when used for TIG welding. Rated for 1 minute on and 9 minutes off. Operates on 208/230 VAC, 60 Hz, single phase. Size is 20.7″ Ht.×14.5″ Wd.×25.6″ Dp. Weight is 212 lbs.

Torch kit includes a back cap; 0.040″, 1/16″, and 3/32″ collets and collet bodies; 1/4″, 5/16″, and 3/8″ alumina nozzles; and three 7″ long tungsten electrodes (0.040″ dia., 1/16″ dia., and 3/32″ dia.).

Optional cart provides mobility. Includes single gas cylinder platform, bracket, and chain. Measures 33½″ Lg.×27″ Wd. with two 4″ dia. casters in front and two 10″ dia. wheels in back. Designed for gas cylinders up to 10″ Dia.×60″ Ht.

Welding Water Coolers

Two Gallon

Cool the heat generated in guns and torches. These recirculating coolers work with MIG, TIG, resistance, and plasma welders. The *2-gal. cooler* is for guns and torches up to 300 amps; *3-gal. cooler* up to 600 amps. Maximum flow is 1.7 gpm. Operate on 115 VAC, 50/60 Hz, single phase, 6.4/5.6 amps.

Inlet and outlet hose connections are 1/4″ NPT female. The outlet connects to a hose running to your welder or torch and the inlet connects to a hose running back (recirculating) from your welder or torch.

Coolants keep your cooler running in prime condition. Use instead of tap water to prevent mineral deposit buildup and frozen lines in any recirculating (closed-loop) system. For MIG, TIG, and resistance welding, as well as plasma cutting and welding. Coolants are nonconductive.

MIG and TIG Cable Covers

Torch Not Included

Protect the cables on your MIG guns and TIG torches from weld spatter. Covers are made from Zytol, a tear- and abrasion-resistant fabric with a maximum temperature of 2100° F. A zipper down the length of the cover lets you enclose your cable without disconnecting the torch; a flap protects the zipper. ***MIG covers*** have an ID of approximately 1¼″ and can also be used in plasma applications. ***TIG covers*** have an ID of approximately 1″.

TIG Torches and Accessories

TIG Torch Kits

Air-Cooled TIG Torch Kit

Include a torch body, a long-lasting hose assembly, and a handle. *Kits in Series 9* and *20* include a medium back cap. *Kits in Series 17, 18,* and *26* include a long back cap.

Note: For use with TIG welders including Lincoln, Miller, and Hobart welders that meet torch amp requirements.

Plasma Arc Cutting Systems

Using compressed air and electricity, these cutters make accurate cuts with minimal heat buildup and distortion. They cut through steel, stainless steel, aluminum, brass, copper, and other conductive materials. All systems include a cutting torch with a 20-ft. cable; a 20-ft. ground cable and ground clamp; a pressure regulator with gauge; a power cord with three-prong plug (8½ ft. for 15-amp cutter, 10 ft. for 20-amp cutter, 8 ft. for 60-amp cutter); cutting tips (1 for 15-amp cutter, 2 for 20-amp cutter, 3 for 60-amp cutter); electrodes (1 for 15-amp and 20-amp cutters, 3 for 60-amp cutter); and a ¼″ compressed air connection (except for 15-amp cutter).

15-amp cutter has a built-in air compressor and is lightweight for easier portability. Operates on 60 Hz, single phase.

20-amp cutter requires 396 cfh (cubic feet per hour) of air at 65 psi. Operates on 50/60 Hz, single phase.

60-amp cutter requires 402 cfh of air at 75 psi. Operates on 50/60 Hz, single or 3 phase.

20 Amp

Victor Oxygen/Acetylene Welding and Cutting Kits

These kits offer a complete system for welding, cutting, and heating. All include single-stage regulators, torches with check valves and flashback arresters to prevent the reverse flow of gas, a torch handle, a cutting attachment, a welding nozzle, a cutting tip, a torch lighter, goggles, and hose. Meet CGA (Compressed Gas Association) standards.

(A) Victor Cutskill Kits— Include regulators for oxygen (CGA540) and acetylene (CGA510).

(B) Victor Professional Kits— Include regulators for oxygen (CGA540) and acetylene (CGA510). *Journeyman* model includes two additional welding nozzles.

(C) Victor TurboTorch Kits with Portable Tote— Include two additional welding nozzles, regulators for oxygen (CGA540) and acetylene (CGA200), and a rugged plastic carrying tote. *Kit with cylinders* includes one unfilled 20 cubic ft. oxygen cylinder and one unfilled 10 cubic ft. acetylene cylinder.

Precision Oxygen/Acetylene Mini Torch

Kit

With a needle-point flame, these torches allow for precision welding, brazing, soldering, and heating. Great for electronics, plumbing, and jewelry repair. Torch produces enough heat to weld steel up to 3/32″ thick. Flame reaches up to 6000° F using oxygen and acetylene. Hydrogen and propane can also be used, unless noted.

Kit—Includes torch, five welding tips in 0.011″ to 0.047″ sizes, and two 8-ft. hoses with 9/16″-18 (B size) female fittings.

7932A12 ..... $173.45

Premium Kit—Includes everything in the kit above, plus an R (20 cubic feet) oxygen cylinder, an MC (10 cubic feet) acetylene cylinder, a single-stage oxygen regulator (CGA540), a single-stage acetylene regulator (CGA200), and a plastic carrying case. Cylinders are shipped unfilled.

7932A11 ..... $717.55

Optional Magnetic Torch Stand—Holds torch and organizes tips.

7932A13 ..... $32.97

Replacement Tips

Use ***welding tips*** for pin-point heat. ***Twin-flame tips*** are designed for heating both sides of a material.

Torch Cutting Guide

Cut straight, circular, beveled, and irregular shapes easily and precisely. This guide holds your torch and pivots on the centering pin. Cuts circles up to 39″ in diameter. Has a universal bushing that accepts all torches.

8001A11 ..... $88.66

Air/Acetylene Torch Kits

No oxygen tank required. Use for HVAC work and general purpose soldering, heating, and brazing (unless noted). Tanks are not included.

Prest-O-Lite Torch Kits and Replacement Tips

Include a No. 403 torch handle (with rear valve); one each of fine, light, medium, and heavy screw-in tips; an acetylene pressure regulator; and a 12 1/2-ft., 3/16″ ID hose with 3/8″-24 (A size) female fittings.

Gas Pressure Control Regulators

Regulator with Male Inlet Tank Connection

Outlet Fitting to Welding Hose

Regulator with Female Inlet Connection Attached to Tank

Regulator with Female Inlet Tank Connection

Safely reduce gas pressure with these regulators. Meet CGA (Compressed Gas Association) standards. All regulators have two gauges (one for measuring operating pressure and one for measuring cylinder contents), except for liquid cylinder style, which only has an operating pressure gauge. Cylinder content gauge for oxygen, argon, helium, nitrogen, carbon dioxide, and hydrogen measures 0-4,000 psi and 0-400 psi for acetylene, propane, MAPP, and propylene. For replacement gauges, see 4000K series on page 563.

Single-stage regulators reduce pressure to a selected delivery pressure. ***Two-stage regulators*** ensure a constant, steady delivery pressure, despite inlet pressure fluctuations. Use when even delivery pressure is needed at all times (full tank to empty tank) during use.

Standard Duty— For general purpose welding. Made of steel and brass. Include two 2″ dia. gauges and a neoprene diaphragm.

Heavy Duty— Made of forged brass for a long life. Include two 2½″ dia. gauges and a neoprene diaphragm.

Super Duty— Withstand extreme conditions in abusive environments. Made of forged brass with a stainless steel diaphragm. *Single-stage regulators* have two 2½″ dia. gauges. *Two-stage regulators* have two 2″ dia. gauges.

Liquid Cylinder— For withdrawing gas from liquid cylinders. Made of forged brass. Include one 2½″ dia. gauge and a stainless steel diaphragm. *Note:* Regulators are rated for 3,000 psi cylinder pressure but have no cylinder content gauge.

♣ RH = right hand, LH = left hand.

Gas Flowmeter/Regulators

A&C

B

Easy to see at a distance, these flowmeters measure and control gas flow for MIG and TIG welding. Include a gauge that measures cylinder contents from 0-4,000 psi.

(A) Single Flowmeters— Include a single-flow tube with dual scale (one for argon and one for carbon dioxide) that is calibrated for measuring gas flow from 0-70 scfh (standard cubic feet per hour). Also include a valve for adjusting and controlling flow. Use the optional 5/8″-18 to 9/16″ male outlet adapter to change outlet fitting.

(B) Dual Flowmeter— Eliminates the need for two cylinders and two flowmeter regulators. This unit allows two torches to run simultaneously from one cylinder of either argon or helium. Includes two flow tubes with a dual scale on each tube, one for argon that's calibrated to measure gas flow from 0-45 scfh and one for helium calibrated for 0-140 scfh. Also includes a valve to adjust and control flow. Conforms to CGA (Compressed Gas Association) E-4.

(C) Multigas Flowmeter— Use with argon, nitrogen, C-25, and helium. Includes four scales and a single-flow tube with a valve for adjusting and controlling the gas flow. Scales measure gas flow from 10-70 scfh for argon, 10-80 scfh for nitrogen, 10-65 scfh for C-25, and 20-220 scfh for helium. Flow tube rotates for viewing the different scales.

Gas Flowgauge/Regulators

With Male Inlet Tank Connection

Measure and control gas flow for MIG and TIG welding. These brass regulators have two 2″ dia. gauges (one for measuring gas flow and one for measuring cylinder contents). Cylinder content gauge measures 0 to 4,000 psi; operating gas flow is 0-60 scfh (standard cubic feet per hour).

Kits include a flowgauge/regulator and a 10-ft. 3/16″ dia. hose with 5/8″-18 male fittings on both ends.

For Gas	Inlet CGA No.★	Outlet Fitting to Welding Hose♣

★ CGA 580 connection is male for tanks with female threads; CGA 320 is female for tanks with male threads. ♣ RH = right hand.

Line Regulators

Perfect for remote-line operations (such as multiple welding booths) and gas distribution (pipeline) systems. Regulators are single stage and made of brass. All connections are 1/4″ NPT female and flush with the regulator. Include a threaded brass plug to close outlets when not in use.

Note: Designed for line use only; do not mount directly on gas cylinders.

7864A13 has a neoprene diaphragm and a 2½″ dia. gauge. Has one inlet on the right side and one outlet on the bottom, back, and left side. For use with acetylene.

7864A11 and *A12* have a nickel and stainless steel diaphragm and a 2″ dia. gauge. They have one inlet on the right side and one outlet on the bottom and left side. Use with nitrogen, argon, oxygen, helium, hydrogen, propane, carbon dioxide, air, and water.

0-200	0-200	500	**7864A12**	86.36

High-Pressure Gas Control Regulators

Get precise gas control at high inlet and delivery pressures. These brass single-stage regulators work with pressurized systems and high-pressure testing. Include two 2½″ dia. gauges (one measures operating pressure and one measures cylinder contents); a cartridge-type seat assembly; and one ¼″ female Swagelok® (Yor-Lok) outlet fitting on the bottom of the regulator, Type 316 stainless steel tube fitting. Conform to CGA (Compressed Gas Association) standards.

With Male Inlet Tank Connection

● CGA 580 connection is male for tanks with female threads; CGA 677 is female for tanks with male threads.
★ Includes a relief valve.

Regulators for Nitrogen Gas Purging

Designed for nitrogen purging and joint-testing applications on air conditioning, refrigeration, and plumbing systems. These forged-brass, single-stage regulators can also be used with argon and helium. Include two 2″ dia. gauges (one measures operating pressure and one measures cylinder contents). Cylinder content gauge measures 0-4,000 psi. Meet CGA (Compressed Gas Association) standards.

66325A41 and *A42* have a fabric-reinforced nylon diaphragm and a 7⁄16″-20 UNF male outlet connection (to air conditioning hose) with 37° flare. 66325A23 has a neoprene diaphragm and a ¼″ NPT male outlet connection (to air conditioning hose) with 45° flare.

▲ CGA 580 connection is male for tanks with female threads.

High-Purity Gas Pressure Control Regulators

Machined from brass and Type 316L stainless steel with a smooth finish for precise control when working with specialty gases. Use in research sample systems, emission monitoring systems, and chromatography. Include two 2″ dia. gauges (one measures operating pressure and one measures cylinder contents), a Type 316L stainless steel diaphragm to eliminate contamination from diffusion or outgassing, and an encased one-piece seat with filter to protect seat from particle contamination. Seat and seals are PTFE. Cylinder content gauge measures 0-4,000 psi.

Single-stage regulators reduce pressure to a selected delivery pressure. ***Two-stage regulators*** ensure a constant, even delivery pressure, despite inlet pressure fluctuations. Use when delivery pressure affects work results.

■ CGA 580 connection is male for tanks with female threads; CGA 350 is female for tanks with male threads. ♦ Connection is female.

Flashback Arresters

Stop flames from traveling back into your welding system (also known as flashback). Arresters extinguish flames and have a check valve to stop reverse flow. They are reusable; no resetting required after flashback. Choose an arrester for oxygen, fuel gas, or a pair of each. Meet ISO 5175, Class 1, and European Safety Specification EN730.

Maximum pressure is 143 psi for oxygen; 15 psi for acetylene; 22 psi for MPS; and 50 psi for hydrogen and propane. Connections for oxygen have right-hand threads; connections for gas have left-hand threads.

Arresters for Torches— Attach directly to a torch. *Standard* are for torches that cut up to 9″ thick steel or have up to a No. 2 welding tip. *Small* are designed for small torches (jewelry, refrigeration, and HVAC) that cut up to ½″ thick steel or have up to a No. 00 welding tip.

Arresters for Regulators— Attach to a regulator's outlet connection. They have a thermal shut-off valve that automatically shuts off the gas flow in the event of internal or external fire, burn backs, or multiple flashbacks. *Standard* are for torches that cut up to 11″ thick steel or have up to a No. 2 welding tip. *High-gas-flow* are for torches that cut up to 20″ thick steel or have up to No. 5 welding tips. *Small* are for torches that cut up to ½″ thick steel or have up to a No. 00 welding tip.

Arrester for Regulator with Gas Tank, Regulator, and Hose

	Connection♠	Oxygen	Each	Fuel Gas	Each	Oxygen/Fuel Gas	Pair
Arresters for Torches							
Standard	9⁄16″-18 (B Size)	78335A31	$40.17	78335A22	$40.17	78335A41	$79.62

Small	3⁄8″-24 (A Size)	7942A51	48.98	7942A52	48.98	7942A64	88.82

♠ Each end has same threads; one end male, one end female.

Reverse Gas-Flow Check Valves

Just 10 oz. of reverse pressure closes these valves, stopping the reverse flow of gas in your torch, hose, or regulator. All are brass with a stainless steel spring. Maximum operating pressure is 125 psi for oxygen; 50 psi for fuel gas. Connections for oxygen have right-hand threads; connections for gas have left-hand threads.

Note: Valves do not stop flashbacks.

For Torches with 3⁄8″-24 (A Size) Connections— Connection to torch is 3⁄8″-24 female; connection to hose is 3⁄8″-24 male.

For Torches with 9⁄16″-18 (B Size) Connections— Connection to torch is 9⁄16″-18 female; connection to hose is 9⁄16″-18 male.

For Regulators— These valves replace the regulator's outlet fitting. They have a 9⁄16″-18 male thread outlet connection (to hose) and a ¼″ NPT male connection (to regulator).

Quick Connectors for Gas Welding

Gas Flow Direction →

Hose-to-Torch Set

Make setting up and taking down equipment faster and easier. Connectors allow you to quickly link and unlink welding hoses, torches, and regulators. They have a spring-loaded lock for quick, gas-tight connections and integral reverse-flow check valves to prevent the reverse flow of gas. Each set has one right-hand connection for oxygen and one left-hand for fuel gas. Connections are 9/16″-18 (B size); torch and regulator connections are female, hose connections are male.

Hose-to-Torch Set	7934A1	$57.05
Hose-to-Hose Set	7934A2	60.05
Regulator-to-Hose Set	7934A3	60.05

Welding Hose

This flexible hose is abrasion, weather, and ozone resistant. Meets Compressed Gas Association (CGA) and Rubber Makers Association (RMA) requirements. Working pressure is 200 psi.

Hose with 9/16″-18 (B size) female fittings on both ends has right-hand threads for oxygen and left-hand threads for acetylene.

Grade R Welding Hose—For use with oxygen and acetylene. *Single-line* hose comes in your choice of green for oxygen or red for acetylene. *Twin-line* has green (oxygen) joined with red (acetylene) hose. **To Order:** For single-line hose, please specify color: green (for oxygen) or red (for acetylene).

Grade T Welding Hose—For use with oxygen and fuel gases such as propane and natural gas. This twin-line oil- and flame-resistant hose has green hose for oxygen joined with red hose for fuel gas.

Welding Hose Fitting Kits

Include brass fittings and a plastic case.

3/16″ and 1/4″ Hose ID Kit:

- One crimping tool
- Four each 3/8″-24 (A size) female right-hand (RH) and left-hand (LH) nuts
- Eight each 9/16″-18 (B size) RH and LH nuts
- Eight 3/16″ hose ID (A size) nipples
- Six 3/16″ hose ID (B size) nipples
- Ten 1/4″ hose ID (B size) nipples
- Two 3/16″ ID hose splicers
- Four 1/4″ ID hose splicers
- One each 3/8″-24 (A size) male RH and LH and 9/16″-18 (B size) male RH and LH hose couplers
- Twelve each 0.450″ and 0.593″ ID ferrules
- Ten 0.562″ ID ferrules

7869A23 ..... $80.36

5/16″ and 3/8″ Hose ID Kit:

- One crimping tool
- Eight each 9/16″-18 (B size) female RH and LH nuts
- Eight each 5/16″ and 3/8″ hose ID (B size) nipples
- Two each 5/16″ ID and 3/8″ ID hose splicers
- Two each 9/16″-18 (B size) male RH and LH hose couplers
- Eight each 0.625″ ID, 0.656″ ID, and 0.718″ ID ferrules
- Six 0.687″ ID ferrules

7869A24 ..... $116.68

Welding Hose Reels

Keep welding hose out of the way. Hose locks in place when extended; tug on the hose to release lock and rewind hose. Reels hold 1/4″ hose and include four 1/2″ dia. mounting holes.

Reels with hose have a twin-line hose with 9/16″-18 (B-size) female connections. Working pressure is 200 psi.

Grade R hose is for oxygen and acetylene.

Grade T hose is oil and flame resistant; for MAPP, acetylene, hydrogen, natural gas, propane, and propylene.

Continuous-Flame Butane Gas Ignitors

Rigid *Flexible*

A continuous ignition system keeps these ignitors lit. They include a slide-button starter, an adjustable flame, a fuel-viewing window, and a ring for hanging. Require butane (included) and one AA battery (included).

Rigid tube is good for lighting torches and bunsen burners.

Flexible tube gets into hard-to-reach areas.

Tube Style	Tube Length	Overall Length

Propane Gas Torches

Economy Torch

Self-Igniting Economy Torch

Self-Igniting Standard Torch

Self-Igniting High-Output Torch

Torches have 1″-20 female threads for connection to Fuel Cylinders on page 3391. With propane, the flame temperature reaches 3400° F (unless otherwise stated). Self-igniting torches have an on/off button.

Economy Torches

For use only with propane. Use one of the Gas-Torch Lighters on page 3389 to ignite.

Torch has a pencil-point tip for a concentrated flame for detail work. Torch generates 2,534 BTUs per hour and can soft solder up to 3″ dia. copper tubing.

Five-piece torch kit includes a torch with pencil-point tip, 1.5-oz. lead-free solder, 1-oz. flux, one acid brush, and a 14.1-oz. propane cylinder. Torch generates 2,780 BTUs per hour and can soft solder 1″ dia. copper tubing. Flame temperature reaches 3300° F. This product is ANSI certified for use with drinking (potable) water in all states as of October 1, 2010.

Torch	**8011A14**	$15.29
Five-Piece Torch Kit	**78175A44**	26.50

Self-Igniting Economy Torches

For use only with propane, these torches are a good choice for light and medium duty jobs. Soft solder 1″ dia. copper tubing. Include an adjustable flame, a stainless steel burn tube, and an easy-to-hold plastic handle with rubber grip. Generate 4,142 BTUs per hour.

Torch	**78245A3**	$34.26
Torch with 14.1-oz. Propane Cylinder	**78245A53**	38.85

Self-Igniting Standard Torches

With propane it soft solders 2″ dia. copper tubing. Torches have swirl-flame tip, a cast aluminum body, and a stainless steel burn tube. Generates 6,732 BTUs per hour with propane. With propylene gas, the flame temperature reaches 3650° F.

Torch with adjustable flame has a knob for controlling flame height.

Torch	**78155A81**	$53.80
Torch with Adjustable Flame	**7834A69**	62.44
Replacement Swirl-Flame Tip	**7834A691**	5.81

Self-Igniting Wide-Flame Torch

With a tip that produces a wide-spread flame, this torch can heat large surfaces quickly and easily. It soft solders 2″ dia. copper tubing using propane. Torch has a cast aluminum body, a brass burn tube, and a trigger guard to prevent accidental ignition. Generates 12,750 BTUs per hour for propane and 11,500 BTUs for propylene gas. With propylene gas, the flame temperature reaches 3600° F.

Torch	**8015A66**	$91.71
Replacement Wide-Flame Tip	**8015A68**	10.18

Self-Igniting High-Output Torch

With higher output capabilities, this torch can heat wider and thicker surfaces. Includes a swirl-flame tip and a knob for controlling flame height. With propane, it soft solders 3″ dia. copper tubing and silver solders 1″ dia. copper tubing. Torch has a cast aluminum body and a brass burn tube. Generates 12,936 BTUs per hour. With propylene gas, the flame temperature reaches 3600° F.

Repair kit includes a swirl-flame tip and orifice.

Propane Gas Torch Kits w/ Flexible Hose

Pistol Grip

Get into hard-to-reach areas. Kits include an adjustable-flame torch, a pressure regulator, and 5-ft. long flexible hose; a 14.1-oz. propane cylinder; and a belt clip. Use with propane only.

Economy Standard Torch Kit— Use an ignitor (sold separately, see page 3389) to light torch. Burn tube is brass. It can soft solder 3″ dia. copper tubing. Generates 2,780 BTUs per hour. Flame temp. reaches 3300° F.

78615A91 ..... $37.36

Pistol-Grip Torch Kit— Just turn the gas valve and push the trigger to ignite this torch. To extinguish, close the valve. Burn tube is stainless steel. Torch can soft solder 3″ dia. copper tubing. Generates 4,142 BTUs per hour. Flame temperature reaches 3400° F.

78225A82 ..... $59.76

Swivel-Tip Propane Gas Torches

Single Burner

Put the heat exactly where you need it with tips that swivel 360°. Ideal for brazing and soldering. Torches have a 1″-20 female fitting for connecting to standard disposable fuel cylinders and a pressure regulator for consistent heat.

Single-Burner Torch— This self-igniting torch lights with the push of a button. Torch is brass with a stainless steel burn tube and can also be used with propylene. Using propane, it can soft solder 3″ dia. copper tubing. Generates 11,993 BTUs per hour with propane. Flame temperature reaches 3400° F with propane and 3650° F with propylene gas.

78525A65 ..... $45.95

Double Burner

Double-Burner Torch— Provides a short, wide flame, concentrating heat over a large area and can also be used with propylene gas. Made from aircraft-quality aluminum with twin replaceable stainless steel burn tubes. Using propane, it can soft solder 2½″ dia. copper tubing and silver solder 1½″ dia. copper tubing. Generates 19,050 BTUs per hour with propane. Flame temperature reaches 3200° F with propane and 3700° F with propylene gas. Use a Gas-Torch Lighter (sold separately, see page 3389), to light this torch.

7969A41 ..... $98.12

Heavy Duty Propane Gas Torch

Torch

Use this propane torch for roofing, heavy duty heating applications, and to soft solder copper tubing. Torch includes a 4″ long angled brass extension and has a 9/16″-18 left-hand (B size) male fitting for connection to hose. Torch is brass with a high-impact ABS handle. Flame temperature reaches 2950° F. Tips not included; sold separately below. For propane only.

Use hose and adapter (sold separately, see 7976A on page 3391) to connect torch to a bulk propane tank.

Propane Torch **78505A22** $70.02

Oxygen-Propane Gas Torch Kit

This torch has adjustable oxygen flow and can use propane and propylene. Kit includes a torch, a 4-ft. hose, a disposable 1.4-oz. oxygen cylinder, a disposable 14.1-oz. propylene cylinder, five brazing rods, a torch lighter, an instruction manual, and a cylinder stand. Flame temperature reaches 4579° F using propane and oxygen; 5193° F using propylene and oxygen. Using propylene or propane you can cut, weld, and braze up to 3/16″ thick steel.

78645A39 ..... $61.54

Quick-Connect Propane Gas Torch Kit

Quickly connect and disconnect your torch tips for greater versatility and productivity. Plus, this kit can be used with propane, Apachi, HPG, and propylene. With propane, flame temperature reaches 3040° F. Using propylene gas, torch can soft solder 6″ dia. copper tubing and silver solder 4″ dia. copper tubing.

Includes a quick-disconnect handle with one ½″ dia. and one 1″ dia. brass and stainless steel tip, a pressure regulator with POL (CGA 510) ⅞″-14 inlet for connecting to bulk propane tanks and a 9/16″-18 left-hand (B size) male outlet that connects to hose, a 12-ft. hose with 9/16″-18 left-hand (B size) female fitting, and a torch lighter.

■ When using propane.

Fuel Cylinders

These cylinders come filled and have a 1″-20 male fuel outlet valve. Cylinders measure 2 15/16″ Dia. × 10 5/8″ Ht., except for the 16.4-oz. propane cylinder, which is 3 7/8″ Dia. × 7 3/4″ Ht. Cylinders are not refillable.

All cylinders meet D.O.T. 39.

Propane—Use to heat, solder, heat shrink, and thaw.

Propylene—Produces the highest flame temperature and is better than propane for brazing.

Oxygen—Use with other fuels to increase flame temperature.

14.1-oz. Propane Cylinder

Oxygen	1.4 oz.	—	—	7817A48	12.90	11.53

Propane Tank Refill Indicator Gauge

Know at a glance if your propane gas supply is running low. Plus, this gauge detects leaks within 45 seconds of turning off the tank. It has a 1 5/16″ female Type 1 Acme inlet connection and a female POL (CGA510) 7/8″-14 outlet connection as well as external 1 5/16″ Acme threads for Type 1 quick-close connections.

Note: For use with tanks manufactured after 1995.

76775A2 ..... $25.45

Empty Propane Tanks

Durable and reliable, tanks are manufactured in accordance with D.O.T. regulations and are unfilled. They have a valve with side outlet and a collar that protects the valve.

Steel tanks are heavy-gauge steel with a rust-resistant painted finish.

Composite tanks have translucent sides so you can see propane level. They're lightweight, stackable, and corrosion resistant. Color is beige.

Steel

Also Available: Empty tanks for propylene, Apachi, and HPG gases. Please ask for 79955A999 and specify type of gas and capacity: 6, 25.5, 60, or 100 lbs.

★ Meet NFPA 58 requirements. Have an internal female POL (CGA510) 7/8″-14 outlet connection as well as external 1 5/16″ male Acme threads that accept Type 1 quick-close connections.

Replacement Valves for Propane Tanks

Valves meet NFPA 58 requirements. *Note:* These valves are not for the 7777A lift truck tanks on this page.

Valves for 10-, 20-, 30-, and 40-lb. capacity tanks are Type 1 valves equipped with an overflow protection device. Inlet is 3/4″ male NPT. Outlet has both an external 1 5/16″ Acme Type 1 connection and an internal female POL (CGA510) 7/8″-14 connection.

Valve for 100-lb. capacity tank is a standard tank valve with a 3/4″ NGT inlet and a female POL (CGA510) 7/8″-14 outlet connection.

Propane Gas Torch with Extended Handle

An extended handle allows you to easily get into hard-to-reach areas. Great for heating, thawing, and sterilizing, torch produces a 2050° F flame. Torch is steel and includes a flame-adjusting valve, a torch lighter, a 10-ft. hose with 1/4″ NPT female fitting, and a POL (CGA510) 7/8″-14 male fitting to connect to propane tanks. Use only with propane.

Adapters and Hose for Torch to Propane Tank Connections

Use these adapters and one of the hoses to connect a propane torch (that would normally connect to a fuel cylinder) to a propane tank. Ideal for extended use or when the tank cannot be moved.

Torch-to-Hose Adapter

Torch-to-Hose Adapter—Has a 1″-20 male fitting that connects to a propane torch and a 9/16″-18 left hand (B size) male fitting that connects to the hoses below.

7976A22 ..... $12.59

Tank-to-Hose Adapter

Propane Tank-to-Hose Adapter—Has a male POL (CGA510) 7/8″-14 fitting that connects to a propane tank and a 9/16″-18 left hand (B size) male fitting that connects to the hoses below.

7976A21 ..... $8.73

Hose

Hoses—Have a 9/16″-18 left-hand (B size) female nut on both ends. Use with the adapters above to connect a propane torch to a propane tank.

12-ft. Hose 7976A34 $33.07
24-ft. Hose 7976A35 $62.16

Complete Assembly—Includes both adapters sold above and the 12-ft. hose sold above.

7976A24 ..... $50.53

Empty Propane Tanks for Lift Trucks

Tanks come unfilled and meet D.O.T. regulations for use with lift trucks. Include an on/off valve, a pressure relief valve, a built-in overflow device, a coupler that connects the on/off valve to the fuel line, and a fuel-level gauge.

Steel

Steel tanks include a damage-resistant footring. Meet D.O.T. 4BA240.

Aluminum tanks are lightweight and nonsparking. Meet D.O.T. 4E240.

Replacement Valve for Lift-Truck Propane Tanks

This valve is designed to fit lift-truck propane tanks. It permits withdrawal of liquid or vapor and has easy-grip wrenching pads for installation. The valve inlet is 3/4″ NPT male to fit propane tank; the valve outlet is 3/8″ NPT male to fit the male lift-truck connector (sold separately).

To link the valve to the lift truck fuel line, you need a male and a female lift truck connector. Female connector connects to your vehicle fuel line and to the male connector for a quick disconnect. Valve and connectors are brass.

Silver Brazing Alloys

Brazing makes bonds that are stronger than a solder on materials that welding would melt. These brazing alloys join most metals and alloys except aluminum and magnesium. Meet Fed. Spec. QQB-654A and AWS specifications.

Alloys with Cadmium— *Tight-joint silver* is also for induction brazing (using electrical current to create localized heat).

Alloys without Cadmium— *Extra-strong silver* is excellent for food-handling equipment. *Silver/copper/phosphorus* uses phosphorus as a fluxing agent.

Prices may fluctuate with the cost of silver.

Brazing Alloy Assortment

Includes these ROHS-compliant brazing alloys and flux:

- 1 troy oz. (one 1/16″ Dia. × 5.4 ft. Lg. coil) of 45/30/25 silver/copper/zinc alloy without cadmium for joining dissimilar metals. Melting temperature is 1225° to 1370° F.
- 1 troy oz. (three 10″ Lg. × 1/8″ Wd. × 0.05″ Thick.) of 15/80/5 silver/copper/phosphorous alloy without cadmium for copper and copper alloys. Melting temperature is 1300° to 1475° F.
- 4-oz. jar of brazing flux.

Price may fluctuate with the cost of silver.

7666A1 ..... $85.26

Brazing Strips for Carbide Tool Inserts

Also known as trimetal brazing strips, these strips have silver with nickel alloy sides and a copper core. Ideal for brazing carbide tool inserts and aluminum bronze to steel. Strips are 1″ Wd. × 0.015″ Thick.

Prices may fluctuate with the cost of silver.

With Cadmium— Melting temperature is 1170° to 1270° F.

Without Cadmium— Melting temperature is 1220° to 1305° F. ROHS compliant.

	1 troy oz. Lg.			5 troy oz. Lg.

Brazing Kit for Aluminum

Join aluminum to aluminum alloys, brass, copper, and most other metals. Kit includes a 0.3-oz. coil of 1/16″ Dia. × 9′6″ Lg. 88.5/11.5 aluminum/silicon brazing wire with a melting temperature of 1070° F and a 0.25-oz. tube of liquid flux. ROHS compliant.

7797A11 ..... $9.05

Brazing Paste Fluxes

Ideal for cleaning and preparing a surface for brazing. Use with silver brazing alloys for brazing a variety of ferrous and nonferrous alloys including brass, copper, carbon steel, stainless steel, nickel, and carbides (not titanium). Residue washes off with hot water.

White Flux— Meets Fed. Spec. O-F-499, Type B; AWS A5.31-92, Type FB3A; and AMS 3410.

Black Flux— Boron-modified, high-temperature flux. Meets Fed. Spec. O-F-499, Type B; AWS A5.31-91, Type FB3C; and AMS 3411. ROHS compliant.

	Maximum Temperature	1/2-lb. Jar		1-lb. Jar	
White Flux	1600° F	7693A1	$8.86	7693A2	$13.03
Black Flux	1700° F	7645A41	12.77	7645A51	17.81

Solder without Flux

Without a flux core, this solid wire and bar solder allows you to choose the flux that works best with your application. (See page 3394 for flux.) Meets ASTM specifications.

63/37 Tin/Lead— Has a low melting point and exceptional flow. For electronics and stainless steel.

60/40 Tin/Lead— The most popular solder for joining electrical leads and wires. Its low melting point makes it ideal for delicate work.

50/50 Tin/Lead— General purpose solder handles standard soldering and sheet metal work.

40/60 Tin/Lead— A good general purpose solder.

30/70 Tin/Lead— For machine and torch soldering.

High Melting Point— Its high melting point prevents remelting when soldering successive joints with another solder.

Extra Strong— For use on stainless steel, it has exceptional strength and is nondulling with a long-lasting bright finish.

Solder for Aluminum

For soldering aluminum to itself and to its alloys. ROHS compliant.

98/2 Zinc/Aluminum— Solders aluminum without the use of flux. It also solders copper and stainless steel when used with external fluxes. Melting temperature is 732° to 760° F.

60/40 Tin/Zinc— Recommended for use with flux, see 7696A on page 3394. Melting temperature is 390° to 635° F.

	Approx. Wt.		
98/2 Zinc/Aluminum			
Approx. 38 Rods (0.125″ Dia. × 18″ Lg.)	2 lbs.	7664A4	$35.60
60/40 Tin/Zinc			
Stick (0.280″ Dia. × 13½″ Lg.)	3.4 oz.	7664A21	9.44
Rod (0.562″ Dia. × 13½″ Lg.)	0.85 lb.	7664A11	36.33
Wire (0.125″ Dia.)	1 lb.	7664A31	33.53

Paste Solder

To solder difficult-to-reach joints this paste solder is the perfect alternative to regular solder and flux. Made of a finely powdered solder combined with a flux paste, you simply apply a thin coat of paste to the surfaces you want joined, then heat, and wipe with a damp cloth.

50/50 tin/lead handles copper, brass, zinc, steel, and bronze.

95/5 lead-free tin/antimony is for copper, zinc, and mild and galvanized steel. ROHS compliant.

	Size	Melting Temp.		
50/50	½ lb.	356°-421° F	7683A4	$19.24
50/50	1 lb.	380°-420° F	7683A3	42.92
95/5 Lead Free	1 lb.	430°-473° F	7774A15	55.95

Solder with Flux Core

No need to add flux—the core of this wire solder is flux.

Single Core

Multiple Cores

Single Flux Core

Tin/Lead with Acid Flux— Has strong cleaning action but leaves residue. Use on common metals such as mild steel, copper, brass, and stainless steel. Also for use on highly oxidized and difficult-to-solder metals. Residue is corrosive and electrically conductive.

Tin/Lead with Activated-Rosin Flux— Activated flux is quick acting and has strong cleaning action, but leaves residue. It dissolves surface oxides for good solder flow and strong connections. For use on brass and copper. Residue is electrically conductive. Ideal for electrical work. Meets Fed. Spec. QQ-S-571.

Tin/Lead with Easy-Clean Flux— Flux residue washes off with water. For use with difficult-to-solder metals.

Tin/Lead with No-Clean Flux— A good general purpose solder that leaves minimal flux residue so you don't have to clean afterward.

Tin/Lead/Silver High Melting Point with Rosin Flux— Ideal for electric motors, radiators, and high-temperature lamps. Also good for first connections since its high melting point prevents remelting when soldering successive joints. Meets J-STD-004.

Multiple Flux Cores

With five rosin flux cores, you'll get fast soldering that uses less solder and transmits less heat to the joint area.

Tin/Lead with Rosin Flux— The best choice for electronic and printed circuit work. Meets J-STD-006.

Tin/Lead/Silver/Antimony with Rosin Flux— For silver-plated surfaces, heat-sensitive components, and near previously soldered joints. Meets Fed. Spec. QQ-S-571E and J-STD-006.

Lead-Free Solder

All are ROHS compliant.

Tin/Silver—For use on food-service equipment, refrigeration, plumbing, heating, and air conditioning.

Tin/Antimony—For air conditioning, refrigeration, and high-temperature applications. Has high strength and a matte finish. Melts and flows like 50/50 tin/lead solder.

100% Tin—Ideal for food-service equipment. Has good strength and is nondulling.

Tin/Silver/Copper—For electronics and electrical applications. Also known as SAC 305, it melts and flows like 50/50 tin/lead solder.

Tin/Copper—The economical choice for electronics and electrical applications.

Water Safe—Melts and flows like 50/50 tin/lead solder. *Wires* are NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2010. *Bar* can be used with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012.

Heat Barriers and Transfers

7689A17

Heat-Sink Clips—These chrome-plated copper jaws clip onto circuit board components to dissipate heat.

1⅛″ Long Clip **7689A13** $9.83
2½″ Long Clip **7689A17** 17.66

Heat Barriers—Stop heat from traveling to adjoining surfaces during soldering, welding, and brazing.

Putty can be formed around pipes and tubing or spread onto a flat surface. It's nontoxic, reusable, and for use on most metals. Maximum temperature is 2000°F.

Spray gel protects components and surrounding surfaces from heat damage and discoloration. It's clear, nontoxic, nonstaining, and won't leave residue.

Putty (1-pt. Jar) **76685A65** $13.22
Spray Gel (32-oz. Spray Bottle) **7654A2** 18.80

Silicone-Free Heat-Transfer Paste—Apply under power transistors and other devices to transfer heat (but not electricity) to metal frame for dissipation. Temperature range is –40° to +392°F. Meets MIL-C-47113.

4-oz. Tube **76645A12** $31.30
1-lb. Jar **76645A14** 68.47

Solder Spool Holder

Keep your solder spools in order. This plastic, static-safe holder has a self-adhesive bottom and holds up to 1 lb. of solder.

7706A67 ..... $38.26

Soldering Fluxes for Plumbing

Flux cleans and prepares surface for soldering. Use this flux to solder common metals such as copper, brass, tin, and steel. Not for aluminum, stainless steel, magnesium, or for use with electronics (unless otherwise stated). All are water soluble except Nokorode. All products except Rubyfluid and Nonacid Liquid are NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2010.

Rubyfluid Flux—Causes solder to flow in a thin film for strong joints with minimal solder use. Can be used on aluminum. These products can be used with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012.

Nonacid Liquid and ***Nonacid Paste Fluxes***—Clean while soldering. Liquid can be used for non-potable plumbing applications. Paste meets MIL-F-4995, Type II.

Fast-Flushing Paste Flux—Extremely water soluble for fast removal from pipe lines. Meets ASTM Spec. B813.

Nokorode Paste Flux—Has a special oil base to protect the solder joint from corrosion. Meets Fed. Spec. O-F-506, Type 1A; A-A-51145; and MIL-FS-6872A.

Soldering Fluxes for Electronics

Needle-Point Dispenser

Flux cleans and prepares surface for soldering. This flux is excellent for soldering electrical assemblies and printed circuit boards. All meet J-STD-004 and are ROHS compliant.

Rosin Flux—The more activated the flux, the stronger the cleaning action, but has more residue.

Easy Clean—Residue is water soluble.

No Clean—Leaves minimal residue.

Dispensing pens are similar in function to a felt-tip marker but dispense flux instead of ink, putting it only where needed.

Needle-point dispenser has a 0.013″ tip opening for precise applications. Includes 0.2 ounces of mildly activated rosin flux and is refillable.

Standard-point dispenser has a 0.031″ tip opening. Comes empty.

	Size		
Rosin Flux (Nonactivated)	1-gal. Bottle	**7798A14**	$45.62
Rosin Flux (Mildly Activated)	1-gal. Bottle	**7798A16**	49.07
Rosin Flux (Fully Activated)	1-gal. Bottle	**7798A12**	48.49

Standard-Point Dispenser (Empty)	—	**7799A12**	5.18

Soldering Flux for Aluminum

Use this paste flux to prepare aluminum and aluminum alloy surfaces for soldering with tin/lead solder. Also for copper, chrome, and brass. Not for electronics. Meets DOD 1866 and is ROHS compliant.

4-oz. Jar **7696A2** $14.64
1-lb. Jar **7696A1** 41.25

Soldering Flux for Stainless Steel

Flux cleans and prepares surface for soldering. This is a fast-acting liquid-acid flux for most grades of stainless steel as well as chrome, copper, and brass. Use with all types of soft solder. Not for stainless steel water tubing or for electronics. Meets Fed. Spec. O-F-506C, Type II and A-A-51145C, Type IIB and is ROHS compliant.

1-pt. Bottle **7695A1** $12.00
1-qt. Bottle **7695A4** 17.14
1-gal. Bottle **7695A3** 45.46

Flux Removers

Removers will not harm circuit performance. ROHS compliant.

Spray dissolves all conventional flux. ***Pens*** are good for spot cleaning and precise removal from printed circuit boards.

12-oz. Spray **7655A12** $15.25
0.32-oz. Pen with No-Clean Flux Remover **7655A21** 11.49
0.32-oz. Pen with Lead-Free Flux Remover **7655A25** 11.07

Butane Torches

Easily solder and desolder with these torches. They also handle light brazing, except 75195A15. All have a self-ignition system and a refillable fuel tank. Flame reaches temperatures up to 2500° F. Butane gas is not included; sold separately below.

Pocket Size Torch—Has a fuel-level window.

Palm Size Torch—The perfect size for your tool kit, this torch is for use on small, intermittent jobs. Has a fuel-level window. Fill the included empty fuel cell with butane gas or replace it with a filled fuel cell (sold separately).

Bench-Top Torch—A wide, stable base allows hands-free use. Has a slide lock for continuous hands-free use.

Combination Torch—Like the Bench-Top torch, it has a wide, stable base for hands-free use and a slide lock for continuous hands-free use. Plus, it has tips for applications that require heat without an exposed flame. Includes a solder tip (maximum temperature is 752° F) and a heat tip (maximum temperature is 932° F).

Combination Torch Kit—Includes the Combination torch and the two tips mentioned above, plus a hot-knife tip, a heat-shrink attachment, a foam cutter, a 5″ wire cutter, 5″ needle-nose pliers, 60/40 tin/lead solder, a sponge, and a black plastic case.

	Overall Size, Lg. × Wd. × Dp.	Run Time		Each
Pocket Size Torch	2.9″ × 1.3″ × 0.9″	20 min.	75195A15	$11.00

Refillable Fuel Cell for 75195A23 (includes fuel)—2/Pkg.			75195A14 Pkg.	$5.51

Economy Cordless Soldering Iron

Get the ease of cordless soldering without the wait of charging. For intermittent use. Includes a conical tip (0.031″ wd.), lead-free solder, a tip wrench, and a safety cap. Runs on four included AA batteries; solders up to 150 joints.

		Each
Soldering Iron	7924A11	$22.34
Replacement 0.031″ wd. Conical Tip	7924A17	10.78
Optional 0.125″ wd. Chisel Tip	7924A18	10.78
AA Batteries (4/Pkg.)	71455K53 Pkg.	$2.94

Cordless Soldering Irons

Powered by rechargeable NiCad batteries (included), these cordless irons offer freedom of movement. The included charging stands run on 110 VAC, 60 Hz. Stands have a 6-ft. cord with two-prong plug. UL listed.

(A) Standard Duty Irons—7768A34 includes a 1/16″ wd. pointed tip and a 5/32″ wd. chisel tip. 7768A22 includes a 1/16″ wd. pointed tip and a 3/16″ wd. conical tip.

(B) Heavy Duty Iron—Includes a 3/32″ wd. pointed tip, a 1/32″ wd. conical tip, a 1/8″ wd. chisel tip, a 4-gram coil of 60/40 tin/lead rosin-core solder, a tip cover, a cleaning sponge, and a screwdriver.

Butane Soldering Irons

Never worry about an exposed flame again—these irons keep flames completely enclosed in the tip. They are self-igniting, ready to use in 30-40 seconds, and include a protective cap. Do not include butane gas (sold separately below).

Economy Iron—Includes a 3/32″ wd. double-flat tip that adjusts up to 850° F. Run time is 60 minutes.

Economy Iron Kit—Includes the economy iron and 3/32″ wd. double-flat tip, plus a 7/32″ wd. flame tip, a 1/2″ wd. hot-knife tip, a 51/64″ wd. blowtorch tip, a 5/32″ ID hot-air tip, a sponge, a safety stand, and a plastic storage case. Temperature adjusts up to 850° F for all tips, except the blowtorch tip, which reaches 2372° F.

Standard Duty Iron—Tip temperature adjusts up to 1200° F. Includes a 3/32″ wd. chisel tip and a 3/16″ ID hot-air tip. Run time is 75 minutes.

Heavy Duty Iron—Tip temperature adjusts from 482° to 932° F; 1202° F when used with a hot-air tip. Has a 5/64″ wd. chisel tip. Run time is 3 hours. UL listed.

Pencil-Grip Soldering Irons

Fiberglass Grip

Cork Grip

A slender, lightweight design makes these pencil-grip irons comfortable to use for high-volume and continuous duty jobs. All include a plug-style screwdriver tip. For additional tips, see series 7747A on page 3397. Irons operate on 115 VAC, 60 Hz and have a 5½-ft. cord with three-prong plug. ***Cork grip*** provides an extra layer of insulation between your hand and the iron.

Also Available: Replacement heating elements. For 40-, 50-, or 60-watt fiberglass-grip replacement elements, ask for 7722A38 and specify wattage and tip shank diameter. For cork-grip replacement elements, ask for 7732A55 and specify wattage and tip shank diameter.

Pistol-Grip Soldering Irons

These soldering irons have a pistol-style grip and are trigger activated. Include a light to illuminate your work. They use a high wattage to provide instant heat and a low wattage to maintain tip temperature during sustained use. Tip is built into the heating element for quick changes. Operate on 120 VAC, 50/60 Hz and have a 4½-ft. cord with two-prong plug. UL listed.

7727A2 is 9¼″ Lg.×1½″ Wd.×6¼″ Ht. 7727A3 is 13″ Lg.×1½″ Wd.×6¼″ Ht.

Replacement heating elements have a built-in pyramid-shaped tip, plug into gun with two-prong connector, and are interchangeable.

Heavy Duty Soldering Irons for Metal Fabrication

With large tips, these irons have excellent heat transfer, making them ideal for running seams in sheet metal. Handles are wood with an enamel finish. Include an iron stand.

Soldering Irons with Plug-Style Tip— Tips slide into place and lock in with a hold-down screw on the iron. For replacement and additional tips, see 7747A on this page. Operate on 110/120 VAC and have a 6-ft. cord with three-prong plug.

Also Available: Soldering irons with heat-dissipating cushion grips; please ask for 7711A37 and specify wattage and tip style. Prices are about 10% higher. Replacement heating elements; ask for 7711A66 and specify wattage. Replacement handles/cord sets for 100- to 550-watt irons; ask for 7711A32 for wood handle; ask for 7711A34 for cushion-grip handle.

Soldering Irons with Screw-On Tip— The screw-on design allows for an extra-large tip width, which means maximum coverage on large electrical connectors and sheet metal joints. Operate on 115 VAC and have a 5½-ft. cord with three-prong plug.

Also Available: Replacement heating elements, ask for 7714A92 and specify wattage.

Soldering Coppers

Heat in an oven or furnace. Coppers have a steel shank and a copper head with a wide tip for thorough heat transfer.

Note: Coppers are often used in pairs; the weight stamped on each copper is the weight per pair, not the weight per each as shown in table.

Weight, lbs.	Tip Wd.	Chisel Head		Pointed Head		Wood Handle	
½	¾″	7739A26	$31.30	7739A22	$31.30	7599A5	$3.02
¾	⅞″	7739A35	31.50	7739A21	31.50	7599A1	3.02
1	1″	7739A34	42.40	7739A19	42.40	7599A1	3.02
1½	1⅛″	7739A33	55.40	7739A18	55.40	7599A1	3.02
2	1¼″	7739A32	67.00	7739A17	67.00	7599A1	3.02

Soldering Iron Tip Cleaners

Dry Brass-Wool Cleaner— Includes an ESD-safe holder and one brass-wool ball that cleans tips exposed to high temperatures.

Cleaner	5153A32	Each	$21.93
Replacement Brass-Wool Balls (2/Pkg.)	5153A34	Pkg.	$6.78

Liquid Tinner/Cleaner— Removes excess oxide and replenishes the tip's original coating. Made of lead-free alloys and special fluxing agents.

0.7-oz. Can	5153A46	Each	$7.56

Bar Cleaner— Made of ammonium chloride (also known as sal ammoniac), these bars remove heavy oxidation from soldering tips and coppers.

0.5-lb. Bar	7701A1	Each	$6.90
1-lb. Bar	7701A2	Each	$8.34

Soldering Iron Stands

Iron stand with sponge tray holds 25- to 60-watt pencil-grip irons with ⅜″ and ½″ barrel diameters. Stand is 2½″ Lg.×⅝″ ID with a 4½″ long protective spring coil. Includes a 3½″ Lg.×4½″ Wd. sponge with hole.

Iron stand holds irons up to 800 watts. Size is 6″ Lg.×1½″ Dia.

Iron sponge tray includes one 3½″ Lg.×4½″ Wd. sponge with hole.

		Each
Iron Stand with Sponge Tray	7764A11	$83.66
Iron Stand	7764A21	12.82
Iron Sponge Tray	7750A11	12.46
Replacement Sponges (10/Pkg.)	7002A37	Pkg. $24.81

Variable-Temperature Soldering Stations

Complete Analog-Display Station

Build-Your-Own Station (With All Parts)

Complete Stations— Temperature adjusts from 350° to 850°F. Include a 50-watt soldering iron with a 1/16″ wd. screwdriver tip, a soldering iron stand, and a tip sponge. Operate on 120 VAC and have a 5-ft. cord with three-prong plug. Control units are UL listed. *Analog-display station* is marked in 10° increments. *Digital-display station* has a three-digit LED and adjusts in 1° increments.

Build-Your-Own Stations— Irons heat up quickly and temperature adjusts in 1° increments. *Digital-display control unit* has a three-digit LED. Operates on 120 VAC and has a 6-ft. cord with three-prong plug. *40-watt soldering iron* is for general purpose soldering and adjusts from 350° to 850°F. Includes a 1/16″ wd. screwdriver tip. *80-watt mini soldering iron* adjusts from 150° to 850°F and works with lead-free solder. Includes a 3/32″ wd. chisel tip. *Stands* include a tip sponge.

Fixed-Temperature Soldering Stations

These soldering stations include a 700°F tip with a sensor to maintain a fixed temperature and prevent overheating or burning out the iron. To solder at a different temperature simply choose another tip from the *additional plug-style tips* sold separately below. The included tip is plug style 1/16″ wd. screwdriver. Stations also include a 42-watt iron, a soldering iron stand, a tip storage area, a sponge, and a 5-ft. power cord with three-prong plug. Stations are 60 watts, static free, ESD (electrostatic discharge) safe, and UL listed.

			Each
120 VAC, 50/60 Hz Station	7718A11		$152.15
220/240 VAC, 50/60 Hz Station	7718A22		153.66

Soldering Stations for Heat-Sensitive Components

A&B **C&E** **D&F**

Tweezer-Style Handpiece

Plier-Style Handpiece

Keep the heat only where it's needed. Also known as resistance-soldering stations, these stations provide instant, concentrated heat only where the electrode tip touches. Include a power unit, a handpiece, two electrode tips, and a footswitch. Stations operate on 110/120 VAC, 50/60 Hz and have a 6-ft. cord with three-prong plug.

A ***Low-Capacity with Tweezer-Style Handpiece—*** Use for small connections. Includes a 5″ long handpiece with a 3/8″ maximum opening. Adjustable up to 100 watts.

B ***High-Capacity with Tweezer-Style Handpiece—*** Use for antenna leads, coaxial cable, lugs, posts, and connections up to 1/4″ dia. Includes a 7″ long handpiece with a 3/4″ maximum opening. Adjustable up to 250 watts.

C&D ***Medium-Capacity with Plier-Style Handpiece—*** *Style C* is for copper tubing and terminal connections up to 1/2″ dia. and microwave housing. Includes a 7″ long handpiece with a 9/16″ maximum opening. Adjustable up to 1,100 watts. *Style D* is for thin-walled copper tubing up to 1 1/2″ dia., large cables, battery terminals, and for HVAC and plumbing applications. Includes a 10″ long handpiece with a 3″ maximum opening. Has three wattages: 500, 1,300, and 1,800.

E&F ***High-Capacity with Plier-Style Handpiece—*** *Style E* is for thin-walled copper tubing up to 1 1/2″ dia. and heavy duty soldering where control of high heat is critical. Includes a 10″ long handpiece with a 3″ maximum opening. Adjustable up to 1,800 watts. *Style F* is for thin-walled copper tubing up to 3″ dia., large cables, battery terminals, and for HVAC and plumbing applications. Includes a 10″ long handpiece with a 3″ maximum opening. Has three wattages: 1,000, 2,000, and 3,000.

D, E, F	7762A29	59.22

Soldering Stations for Small Heat-Sensitive Parts

Get instant heat only where you need it. Stations include a plier-style handpiece that confines the heat to where it touches. Ideal for heat treating, brazing, butt welding, and silver soldering small parts. Stations also include a power unit and either a hand or footswitch to control power.

Handpieces have carbon electrodes and a 4-ft., two-wire cord that connects directly to the power unit with screw terminal connections for high (200) watt output and low (64) watt output. Power unit operates on 115 VAC, 60 Hz and has a 6 1/2-ft. cord with a three-prong plug.

Optional chrome alloy wire connectors are for intricate soldering work.

	Soldering Stations	Each	Repl. Handpiece	Each
With Hand Switch	7713A2	$322.48	7713A1	$138.44
With Foot Switch	7713A6	393.69	7713A5	191.18
Replacement Carbon Electrodes	7713A3	Pair	$12.18	
Optional Chrome Alloy Wire Connectors	7713A4	Pair	$24.66	

Copper Braids for Solder Removal

Place these braids and a hot iron tip over unwanted solder; the braids absorb molten solder.

Fluxed— Has a rosin-core flux, which is ideal for lead-free and electrical solder applications.

Static-Free Fluxed— Braid is on a static dissipative spool to eliminate electrostatic discharge when using and has a rosin-core flux for lead-free and electrical solder applications.

Flux Free— With no flux on the braid, you can apply the flux (not included) that best fits your application.

Wd.	Lg.	Fluxed		Static-Free Fluxed		Flux Free	
1/32″	5 ft.	7782A9	$4.75	76855A7	$5.08	7836A4	$4.51

Volatile Organic Compounds (VOCs)—Emit vapor/gas into the atmosphere under normal circumstances; when the container is opened they begin to vaporize. VOCs are regulated at the federal, state, and local level. VOCs lead to poor air quality and are most strictly regulated in areas of poor air quality like Los Angeles, CA.

Adhesive Types

Acrylics—Bond plastic to metal, plastic to plastic, and rubber to metal. They're also good for filling spaces between surfaces and tolerate moisture and dirty, unprepared surfaces. Begin to harden within minutes and provide high-strength bonds. Two-part acrylics require mixing. Two-step acrylics don't need mixing but are used with a primer/activator.

Construction Adhesives—Also called panel adhesives, they bond drywall, fiberglass (FRP), metal, plaster, plywood, and wood. Also excellent for filling spaces between surfaces. Begin to harden quickly and remain flexible when dry. Made of a thick formulation of natural or synthetic rubber dispersed in a solvent or water.

Contact Cements—Bond fabric, leather, metal, paper, rubber, and wood. Apply on both surfaces to be joined, air dry, and bring together; stick instantly and permanently. Made of a synthetic rubber (usually neoprene) dispersed in a solvent or water.

Epoxies—Bond ceramic, cement, fiberglass (FRP), glass, metal, some plastics, rubber, urethane, and wood. Also good for filling spaces between surfaces and have good resistance to high temperatures, solvents, and impact. Begin to harden within a few minutes to several hours and provide high-strength bonds. Two-part epoxies require mixing.

Hot Melts—Bond most materials, especially porous surfaces such as leather, paper, and wood. Also excellent for filling spaces between surfaces. Begin to harden quickly and provide rigid-to-flexible low-strength bonds. They melt when heated and solidify when cooled. Require dispensing equipment.

Metal-Filled Epoxies—Also called liquid metals, they're like regular epoxies with powdered metal fillers added. Bond aluminum, brass, iron, ceramic, glass, and some plastic. They're nonrusting and resist water, most chemicals, and extreme temperatures. Begin to harden slowly but can be machined at full strength.

Silicones—Bond canvas, cement, ceramic, fiberglass (FRP), glass, metal, rubber, and wood. Great as gap fillers and sealants and for vertical and overhead applications because they don't run. Have excellent resistance to temperature extremes and chemicals. Reach full strength in 24-72 hours with exposure to moisture in air. They keep their rubber properties under most conditions.

Super Glues—Also called cyanoacrylates, crazy glues, super bonders, and instant adhesives. They bond a wide range of materials including metal, plastic, and rubber. Not recommended for use on glass. Begin to harden quickly.

Threadlockers and Retaining Compounds—Also called anaerobics, they bond metal. Begin to harden quickly; reach full strength in the absence of air and the presence of metal, such as when confined between the threads of a nut and bolt assembly. Can also be used as sealants for pipe joints and threads. Excellent resistance to solvents and water. Bonds can be permanent or not.

Urethanes—Bond metal, polycarbonate, PVC, rubber, and wood; often used on ABS, acrylic, and stretchy materials. Begin to harden within a range of a few minutes to a couple of hours and provide flexible bonds. Two-part urethanes require mixing.

Adhesive Removers, Cleaners & Primers

Epoxy Remover

Remove unhardened and fully hardened epoxies. Remover is a nonflammable liquid with a temperature range of 68° to 120°F. Not for use on PVC, rubber, or urethane. This product is compliant under all state VOC rules in effect on September 1, 2010.

1-gal. Bottle ..... **7532A15** **Each** $68.25

Surface Cleaner for Epoxies and Urethanes

Increase the bonding effectiveness of epoxies, silicones, urethanes, and other adhesives by removing dirt, grease, grime, and tar from metal, plastic, rubber, and wood. This chemical-based cleaner evaporates quickly and doesn't require mixing. Temp. range is 55° to 90°F. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-pt. Bottle ..... **7527A66** **Each** $37.61

Primer for Hard-to-Bond Materials

Promotes adhesion to EPDM rubber, polyolefins (TPO), and thermoplastic elastomers (TPE). Use with acrylic, epoxy, and urethane adhesives. This product is compliant under all state VOC rules in effect on June 1, 2011, except in California.

8-oz. Can ..... **66595A4** **Each** $34.84

Loctite® Fixmaster® Epoxies in Mixer Cups

1. Pull off lid.

2. Pop open cup and mix.

Resin and hardener come measured in a two-part cup for convenient mixing. Bond ceramic, concrete, glass, metal, hard plastic, rubber, and wood. Temperature range is –65° to +180°F. Come in a can of 10 two-part mixing cups. These products are compliant under all state VOC rules in effect on October 1, 2008.

21425 and ***21426*** are gray. ***21427*** is translucent and also bonds stone.

Loctite No.	Size	Begins to Harden	Reaches Full Strength		Each
21425	0.12 oz. (3 g)	5 min.	12 hrs.	**7512A15**	$27.93
21426	1 oz. (28 g)	5 min.	12 hrs.	**7512A16**	68.67
21427	0.12 oz. (3 g)	1 hr.	24 hrs.	**7512A14**	28.57

For information about adhesives, see page 3400.

3M Scotch-Weld Adhesive Duo-Pak Cartridges

Bond aluminum, brass, copper, stainless steel, steel, ABS, acrylic, polycarbonate, ceramic, fiberglass (FRP), glass, and rubber. Adhesives can also fill spaces between surfaces. Use an EPX applicator gun with a mixer nozzle to simultaneously mix and dispense these two-part adhesives. Applied at 0.005″ thick, a 1.25-oz. cartridge will cover 3.125 sq. ft.; 1.6 oz.-cartridge, 4 sq. ft.; 1.7-oz. cartridge, 4.25 sq. ft.; and 6.8-oz. cartridge, 17 sq. ft. (all approximate).

These products are compliant under all state VOC rules in effect on October 1, 2008.

Manual EPX applicator guns (sold separately) include 1:1 and 2:1 mix ratio plungers.

Air-Powered EPX applicator gun (sold separately) has a 1/4″ NPT male air inlet and a maximum pressure of 145 psi; includes 1:1 and 2:1 mix ratio plungers for 1.6- and 1.7-oz. cartridges.

Mixer nozzles for EPX guns (sold separately) attach to the adhesive cartridge and mix adhesive as you dispense. 7467A12 is 6 1/4″ long; 7467A93 is 6 21/32″ long; 7467A45 is 3 3/4″ long. For additional mixer nozzles, see 74695A on page 3430.

Epoxy Adhesives

Offer high strength and resistance to chemicals and weather.

DP-100 Low Viscosity— Thin for easier flowing. Meets UL 94HB.

DP-100FR Flame Retardant— Meets UL 94V0 burn test requirements.

DP-100 Plus High Strength— Exhibits much higher shear strength and resistance to peeling than DP-100 and is slightly flexible. Meets UL 94HB.

DP-100NS High Viscosity— Thicker version of DP-100 for use on vertical surfaces.

DP-105 Flexible— Very flexible; ideal for bonding dissimilar surfaces that expand and contract differently.

DP-110 Shock Resistant— Flexible with good shock and impact resistance.

DP-125 Peel Resistant— Very high resistance to peeling.

DP-190 Shock Resistant— Impact and shock resistant with more time before it begins to harden. Also bonds masonry products.

DP-420 High Strength— Excellent durability and shear strength plus resists peeling.

DP-460 High Strength— Similar to DP-420 but with more time before it begins to harden.

DP-460NS High Strength— Thicker version of DP-460 for use on vertical surfaces.

Acrylic Adhesives

Have excellent shear and peel strength and resist impact and weather.

DP-805 High Viscosity— Thick for use on vertical surfaces. Has good peel strength. Bonds metal and plastic.

DP-810 Dirty Surfaces— For oily steel, aluminum, plastic, glass, and painted surfaces.

DP-810NS High-Viscosity Dirty Surfaces— Thicker version of DP-810 for use on vertical surfaces.

DP-820 Slow-Hardening High Viscosity— Similar to DP-805 with a longer hardening time.

Urethane Adhesives

More flexible than epoxies and acrylics and thick for use on vertical surfaces. Prime metal before bonding. Also bond plastic and wood.

DP-604NS High Viscosity Concrete— Ideal for bonding metal and wood to concrete.

DP-605NS High Viscosity— Creates tough, flexible bonds with excellent adhesion.

DP-640 High-Viscosity Impact Resistant— Resists peeling and impact.

Structural Plastic Adhesives

Ideal for difficult-to-bond plastic like ABS, polycarbonate, and PVC.

DP-8005 High Strength— Bond polypropylene and polyethylene; no surface preparation needed. Has excellent water and humidity resistance and good chemical resistance. A great replacement for screws, rivets, and plastic welding.

DP-8010 Slow Hardening— Similar to DP-8005 but with more time before it begins to harden.

DP-8010NS Slow-Hardening High Viscosity— Thicker version of DP-8010 for use on vertical surfaces.

Air-Powered Applicator Gun

Air-Powered EPX Applicator Gun (accepts 1.6- [47 ml] and 1.7-oz. [50 ml] cartridges only)	7467A15	Each	$536.27

Plungers for Manual Guns

Replacement 1:1 Plunger for Manual EPX Applicator Gun 7467A43	7467A46	Each	$9.06
Replacement 1:1 and 2:1 Plunger for Manual EPX Applicator Gun 7467A91	7467A92	Each	$69.71
Replacement 2:1 Plunger for Manual EPX Applicator Gun 7467A43	7467A48	Each	$9.06
10:1 Plunger for Manual EPX Applicator Gun 7467A43 (required for 7467A33, A32, A35, and A37)	7467A49	Each	$11.03

♣ Requires 10:1 plunger 7467A49 (sold separately).

For information about adhesives, see page 3400.

Lord High-Performance Adhesive Cartridges

Make strong bonds on a variety of materials. These two-part adhesives are weather and chemical resistant. Use the ***applicator gun*** (sold separately) with a mixer nozzle (included with adhesive) to mix and dispense. Gun includes 1:1 and 2:1 mix ratio plungers. These products are compliant under all state VOC rules in effect on October 1, 2008.

Epoxy Adhesives

Bond brass, bronze, copper, galvanized steel, stainless steel, steel, ABS, polycarbonate, sheet moulding compound, and fiberglass (FRP).

305-½ Slow-Hardening— Resists grease. Bonds rubber and wood.

310A/B Odorless— Also bonds glass, rubber, stone, urethane, and wood. Nonflammable.

363A/B Fast Hardening— Hardens quickly and self levels. Also bonds ceramic, glass, stone, and wood.

Acrylic Adhesives

Bond aluminum, brass, bronze, copper, galvanized steel, stainless steel, ABS, acrylic, polycarbonate, sheet moulding compound, and fiberglass (FRP).

204/19 Extra-Thick— Thick for use on vertical surfaces.

206/19 Slow Hardening— Hardens slowly.

403/19 Extra-Thick Fast Hardening— Same as the 204/19 but resists impact and peeling and begins to harden faster.

406/19 Extra-Thick Impact Resistant— Same as the 204/19 but with a higher resistance to impact and peeling.

506/19 Shock Resistant— Good shock resistance and hardens quickly.

Urethane Adhesives

Provide a flexible, durable bond on ABS, acrylic, polycarbonate, PET, sheet moulding compound, vinyl laminates, fiberglass (FRP), glass, painted metal, rubber, and wood.

7150A/B High Strength— Solvent free. Nonflammable.

7542A/B General Purpose— Nonflammable.

7550A/C Clear— Creates an invisible bond. Nonflammable.

Applicator Gun	74695A71	Each	$27.74
4 : 1 Plunger (required for 66195A21 and A22)	74695A44	Each	$3.46
Replacement Mixer Nozzles (Full pkg. is 12)	74695A12	Each	Partial Pkg. $1.21 Full Pkg. $0.91

★ @ 0.025″ thick. ♠ Requires 4:1 plunger 74695A44 (sold separately).

Devcon Dev-Pak Adhesive Cartridges

Bond brick, ceramic, concrete, and wood. Use the ***applicator gun*** (sold separately) with a ***mixer nozzle*** (sold separately) to mix and dispense these two-part adhesives. Gun includes 1:1 and 2:1 mix ratio plungers. These products are compliant under all state VOC rules in effect on October 1, 2008.

Epoxy Adhesives

Also bond aluminum, brass, cast iron, cold-rolled steel, copper, stainless steel, and PVC.

14200 5-Minute— Also bonds fiberglass (FRP).

14260 2-Ton Clear— Extra strong and water resistant. Also bonds fiberglass (FRP).

14265 5-Minute Gel— Fills gaps up to 0.25″ and bonds rough and vertical surfaces. Also bonds fiberglass (FRP).

14270 5-Minute— Also bonds fiberglass (FRP).

14277 1-Minute Gel— Great for filling spaces between surfaces. Also bonds polycarbonate.

14278 Epoxy Plus— Superior impact resistance. Also bonds galvanized steel, sheet metal, ABS, acrylic, nylon, polyester, polycarbonate, fiberglass (FRP), and Garolite (phenolic laminates).

14315 High Performance— Superior impact and chemical resistance. Also bonds galvanized steel, sheet metal, acrylic, nylon, polyester, polycarbonate, sheet moulding compound, polystyrene, fiberglass (FRP), and Garolite (phenolic laminates).

Structural Adhesives

Also known as methacrylates, these adhesives also bond hard-to-bond composites, plastics, and dissimilar surfaces.

14320 Plastic Welder— Tough adhesive with high impact strength. Resists peeling, humidity, temperature extremes, and weather. Also bonds cold-rolled steel, ferrite, sheet metal, ABS, acrylic, polycarbonate, polyester, PVC, fiberglass (FRP), and Garolite (phenolic laminates).

14340 Plastic Welder II— Chemical, shock, and impact resistant with high shear strength and resistance to peeling. Bonds same metal and plastics as 14320, plus nylon, polyacrylates, and polyphenylene oxide.

14345 Flex Welder— Fills spaces up to 3/8″. Can be sanded and painted. Also bonds cast iron, cold-rolled steel, painted metals, ABS, acrylic, polycarbonate, polyester, polystyrene, PVC, and fiberglass (FRP).

14366 Metal Welder— Thick for use on vertical surfaces. Bonds aluminum, cast iron, sheet metal, stainless steel, steel, ABS, acrylic, polycarbonate, PVC, Garolite (phenolic laminates), and fiberglass (FRP).

For information about adhesives, see page 3400.

Loctite® Adhesive Cartridges

Ideal for structural bonding, these Hysol® and Speedbonder™ adhesives bond aluminum, stainless steel, steel, ABS, nylon, polycarbonate, and PVC. They come in 1.69-oz. (50 ml) dual-cylinder cartridges (unless otherwise stated) and reach full strength in 24 hours. Applied at 0.005″ thick, adhesives cover approximately 4.1 sq. ft. Use an ***applicator gun*** (sold separately) and a ***mixer nozzle*** (sold separately) to simultaneously mix and dispense. Gun for 1:1, 2:1, and 1:2 ratios includes 1:1 and 2:1 mix ratio plungers. Gun for 10:1 ratio includes a 10:1 mix ratio plunger.

These products are compliant under all state VOC rules in effect on October 1, 2008.

Epoxy Adhesives

Good resistance to solvents and impact.

E-00CL™ Electrical Insulating— Fast-setting and it acts as an electrical insulator. Also bonds ceramic, glass, and wood.

E-00NS™ High Viscosity— Thick for use on vertical surfaces. Also bonds ceramic, glass, and wood.

E-05CL™ Shock Resistant— Ultra clear with low odor and high peel and shock resistance. Also bonds ceramic, glass, and masonry materials.

E-05MR™ Moisture Resistant— Tough and doesn't form a skin, so it's ideal for bulk dispensing.

E-20HP™ High Strength— High shear strength and peel resistance. Good electrical insulator.

E-20NS™ Metal Bonder— Thick for use on vertical surfaces and has high shear strength. Also bonds ceramic and glass.

E-30CL™ Glass Bonder— Optically clear with good insulating properties and thin for more fluidity. Also bonds optical fibers and ceramic.

E-40FL™ Flexible— Flexible and resists impact and shock. Also bonds ceramic, glass, fiberglass (FRP), masonry materials, and wood.

E-60HP™ Metal/Plastic Bonder— High shear strength and peel resistance.

E-90FL™ Impact Resistant— Also acts as an electrical insulator. It also bonds ceramic, glass, rubber, and wood.

E-120HP™ Ultra Strength— Aerospace grade with superior resistance to rapid temperature changes and electricity. Thick for use on vertical surfaces. Has high shear strength and peel resistance. Also bonds ceramic.

1C-LV™ Shock Resistant— Also good thermal, electrical, and high-temp. resistance. It also bonds wood and ceramic.

608™ Fast Setting— Use where optical clarity and quick hardening rates are needed.

9462™ Impact Resistant— Thick for use on vertical surfaces. Has good shear and peel strength and resists high temperatures and shock. Also bonds wood.

Acrylic Adhesives

Tolerate moisture and oily, dirty, and unprepared surfaces.

H3000™ Low Viscosity— Good for general purposes.

H3151™ Metal Bonder— Excellent for aluminum and steel.

H8000™ Aluminum Bonder— Excellent peel strength.

H8600™ Harsh Environment— Bonds aluminum, galvanized steel, and steel.

Urethane Adhesives

Provide more flexible bonds than epoxy or acrylic.

U-05FL™ Metal Bonder— Highly flexible with excellent shear strength and resistance to peeling. Also bonds glass and wood.

U-09FL™ Plastic Bonder— Highly flexible. Also bonds glass.

Job-Size Epoxy and Urethane Adhesives

Easily handle small repair jobs with little packets, or double bubbles, of two-part adhesives. Each package includes ten 0.12-oz. (3.5 gram) dual-pouch packets of resin and hardener (unless otherwise stated) and ten mixing sticks. These products are compliant under all state VOC rules in effect on October 1, 2008.

Epoxy Adhesives

General Purpose— Bonds aluminum, stainless steel, steel, polystyrene, PVC, glass, rubber, stone, and wood.

Quick Setting— For jobs requiring quick hardening. Bonds aluminum, stainless steel, steel, concrete, glass, and wood.

Extra-Thick Quick Setting— Thicker version of quick setting for use on vertical and overhead surfaces. Comes in 0.14-oz. (4 gram) packets.

Extra Thin— More fluid, so it's ideal if a narrow glue line is required. Bonds aluminum, concrete, Garolite (phenolic laminates), and wood.

Machinable— Can be machined, drilled, tapped, and sanded. Bonds aluminum, stainless steel, fiberglass (FRP), Garolite (phenolic laminates), glass, PET (polyester), stone, and wood.

Transparent— Has high impact resistance. Use on printed circuit boards and optical fibers, lenses, and equipment. Bonds aluminum, stainless steel, Garolite (phenolic laminates), glass, and wood.

Vibration Resistant— Semirigid, it resists pulling away from surfaces in high-vibration situations. Also has high shear strength and resists peeling. Bonds aluminum, brass, bronze, copper, stainless steel, steel, polystyrene, PVC, masonry, nylon, rubber, and wood.

Wet-Surface Patching— For wet surfaces and underwater use. Bonds aluminum, stainless steel, concrete, Garolite (phenolic laminates), glass, fiberglass (FRP), and stone.

Urethane Adhesives

General Purpose— Tough, flexible and resists peeling. Bonds aluminum, brass, copper, steel, zinc, Garolite (phenolic laminates), glass, fiberglass (FRP), leather, PET (polyester), rubber, and urethane.

High Pull-Away Resistance— Semiflexible with high shear strength. Bonds aluminum, steel, china, leather, Garolite (phenolic laminates), rubber, and urethane. Ideal for replacing auto mirrors.

High Shear Strength— Semirigid with very high shear strength and good resistance to peeling. Bonds aluminum, stainless steel, steel, tin, flexible electrical connections, Garolite (phenolic laminates), PET (polyester), rubber hose, and urethane.

Epoxy and Urethane Adhesives in Easy-Dispensing Syringes

Ideal for small jobs, these two-part adhesives come in a dual-cylinder syringe with built-in plunger for easy dispensing. These products are compliant under all state VOC rules in effect on October 1, 2008.

Loctite® Epoxy Adhesives

Bond metal, plastic, ceramic, glass, and wood.

1 Minute— Ultra-fast hardening and resists high temperatures. Can also be used to fill and seal cracks and rebuild worn surfaces.

30 Minute— Fiberglass-reinforced for high strength and shock resistance.

Epoxy Adhesives

60-90 Second— Fast hardening. Bonds aluminum, copper, mild steel, stainless steel, ceramic, fiberglass (FRP), rigid plastic, rubber, and stone.

3-6 Minute and 4-7 Minute Gel— Rapid hardening. Bonds aluminum, brass, cast iron, copper, stainless steel, PVC, ceramic, concrete, fiberglass (FRP), glass, and wood. *4-7 minute gel* is thicker for vertical surfaces.

4 Minute— Bonds aluminum, copper, stainless steel, ABS, acrylic, polystyrene, PVC, and wood.

4-6 Minute (Acrylic)— Bonds ABS, acrylic, fiberglass (FRP), Garolite (phenolic laminates), polycarbonate, polyester, and PVC.

4-6 Minute (Epoxy)— Has high shear and peel strength. Bonds aluminum, copper, galvanized steel, mild steel, stainless steel, ceramic, rubber, and wood.

8-12 Minute— Resists water and makes extra-strong bonds on aluminum, brass, cast iron, copper, stainless steel, ceramic, concrete, fiberglass (FRP), glass, PVC, and wood.

100-120 Minute— Slower version of the 90 second adhesive.

Underwater Epoxy Adhesive

For surfaces that are dry, wet, and even under water. Bonds aluminum, brass, stainless steel, steel, ABS, acrylic, nylon, polycarbonate, PVC, ceramic, fiberglass (FRP), masonry, and wood.

Urethane Adhesives in Cartridges

Bond stainless steel, steel, ABS, acrylic, polycarbonate, polystyrene, PVC, and fiberglass (FRP). Include mixer nozzle.

90-120 Second— Also bonds etched or treated polyethylene, polypropylene, and glass.

4-6 Minute— Also bonds glass and quartz.

★ Acrylic adhesive.

Epoxy in Caulk Gun Cartridge

Don't buy a new tool just to apply your epoxy. All you need is a caulk gun that holds a 10-11 oz. cartridge to dispense this two-part adhesive. Bonds aluminum, brass, copper, stainless steel, steel, ABS, acrylic, PVC, rigid plastic, ceramic, fiberglass (FRP), rubber, and wood. Includes two mixer nozzles to mix adhesive as it is dispensed. Temperature range is –40° to +200° F. Color is light amber. This product is compliant under all state VOC rules in effect on October 1, 2008.

See page 3428 for caulk guns.

Size	Begins to Harden	Reaches Full Strength	Mix Ratio		Each
8½ oz.	3½ min.	24 hrs.	1:1	7646A12	$32.73

J-B Weld Epoxies

Create bonds as strong as welding or soldering. These two-part adhesives bond aluminum, brass, bronze, copper, stainless steel, steel, ABS, acrylic, polycarbonate, PVC, ceramic, concrete, fiberglass (FRP), and wood. At full strength they're waterproof, resistant to chemicals and acids, and can be drilled, tapped, sanded, and painted. Mix ratio is 1:1. Color is dark gray. Maximum temperature is 500° F for 8265-S and 8280 epoxies; 300° F for 8276 epoxy.

These products are compliant under all state VOC rules in effect on October 1, 2008.

J-B Weld No.	Tube Size ♦	Begins to Harden	Reaches Full Strength	Approx. Coverage @ 0.125″ Thick.		Each

3M Scotch-Weld Epoxy and Urethane Adhesives

Get secure bonds with these two-part adhesives. Bond aluminum, brass, copper, galvanized steel, stainless steel, steel, ABS, acrylic, nylon, polycarbonate, PVC, rigid vinyl, glass, rubber, and wood. At 0.005″ thick, 1 gal. covers approx. 320 sq. ft. Temperature range is –60° to +350° F for epoxies; –60° to +250° F for urethanes.

These products are compliant under all state VOC rules in effect on October 1, 2008.

1751 Epoxy— Rigid aluminum-filled structural epoxy that has excellent adhesion and fills spaces between surfaces without losing bonding strength. Ideal for holes, dents, and cracks.

1838 and 1838L Epoxies— Rigid with high strength, these epoxies also bond reinforced plastics such as fiberglass (FRP) and PET. *1838* meets MIL-A-52194A. *1838L* is thinner so it flows quickly and easily.

2158 Epoxy— Also bonds damp concrete.

2216 Epoxy— Highly flexible and resistant to peeling. Also bonds masonry. Gray version meets DOD-A-82720.

3501 Epoxy— Hardens quickly and has good weather resistance.

3532 and 3535 Urethanes— Create tough, impact-resistant bonds. Become thicker after 30 seconds of mixing; for vertical use. *3535* hardens faster.

Epoxies in Plastic Dispenser Bottles

Plastic squeeze bottles let you easily dispense these two-part epoxies. *8-oz.* includes 4-oz. bottle of resin and 4-oz. bottle of hardener; *32-oz.* includes 16-oz. bottle of resin and 16-oz. bottle of hardener. Bond aluminum, stainless steel, steel, glass, and wood. Mix ratio is 1:1. These products are compliant under all state VOC rules in effect on October 1, 2008.

General Purpose— Also bonds polystyrene, PVC, rubber, and stone. Begins to harden in 2 hrs.; reaches full strength in 24 hrs. Temperature range is –29° to +200° F.

Quick Setting— Also bonds concrete. Begins to harden in 3 min.; reaches full strength in 24 hrs. Temperature range is 14° to 180° F.

Vibration Resistant— Resists pulling away from surfaces in high-vibration situations. It's flexible and tough with high shear strength. Also bonds brass, bronze, copper, polystyrene, PVC, Garolite (phenolic laminates), and stone. Begins to harden in 3 hrs.; reaches full strength in 7 days. Temperature range is –67° to +250° F.

	Color	*8 oz.* Each		*32 oz.* Each

Loctite® Hysol® Epoxy and Urethane Adhesives for Medical Devices

These two-part adhesives are ISO compliant for bonding medical device assemblies. Bond glass, metal, and plastic. Reach full strength in 24 hours. Temperature range is –65° to +300° F (unless noted). Come in a 1.7-oz. (50 ml) cartridge. These products are compliant under all state VOC rules in effect on October 1, 2008.

Use ***applicator gun*** with a ***mixer nozzle*** (both sold separately) to mix and dispense. Gun includes 1:1 and 2:1 mix ratio plungers.

M-21HP™ Epoxy resists most chemicals and solvents and acts as an electrical insulator. High peel resistance and shear strength. ***M-31CL™ Epoxy*** is thin for easy flow and ultra clear for transparent bonds. Resists most chemicals and solvents. Use for bonding, encasing (potting), and laminating applications that require optical clarity. ***M-121HP™ Epoxy*** is thick for use on vertical surfaces. Resists impact. Also bonds dissimilar materials. ***M-11FL™ Urethane*** is thin for easy flow and ultra clear for nonyellowing, transparent bonds. Also bonds elastomers.

Loctite No.	Begins to Harden	Color	Mix Ratio		Each

Applicator Gun ..... 74695A71 **Each** $27.74
Mixer Nozzles ..74695A12■ **Each** Partial Pkg. $1.21 Full Pkg. $0.91
♠ Temperature range is –65° to +250° F. ■ Full pkg. is 12.

Epoxies for Difficult-to-Bond Plastics

Difficult-to-bond plastics become easy to bond. Use on:

- Polyethylene (UHMW, HDPE)
- Nylon (all blends, glass filled), Acetal
- Polyphenylene sulfide (PPS, Ryton, Konduit)
- Polypropylene, PEEK, ABS, PVC
- PET (Ertalyte, Petlon, Mylar, Dacron polyester)
- ETFE, PVCF, PVDF (Kynar), ECTFE (Halar)
- Polyimide (Ultem, Torlon, Imidex, Pyropel)
- Rubber (neoprene, EPDM, butyl rubber), urethane
- Concrete • Fiberglass (FRP) • Glass • Metal

These two-part epoxies begin to harden in 30-40 minutes; reach full strength in 24 hours. Temperature range is –40° to +350° F. Color is amber. 1.7 oz. covers approximately 3 sq. ft; 1.5 qt. covers approximately 75 sq. ft. These products are compliant under all state VOC rules in effect on October 1, 2008. Use an ***applicator gun*** (sold separately) and a ***mixer nozzle*** (sold separately) to simultaneously mix and dispense the 1.7-oz. cartridges. Gun includes 1:1 and 2:1 mix ratio plungers.

Standard— Also known as Bondit B45TH, it requires minimal surface preparation, is flexible, and resists extreme temperatures, chemicals, and impact. Will cure under water.

Thin— Also known as Bondit B45, it's a thinner version of the standard epoxy. Use as an adhesive, a clear protective coating, or as an alternative to castable polyurethanes when encasing (potting) electrical cables, connectors, and transducer terminations. Resists moisture and seawater.

Size	Mix Ratio	*Standard*	Each	*Thin*	Each

Epoxies in Squeeze Tubes

These two-part epoxies come in two tubes for easy dispensing. Include two mixing sticks. These products are compliant under all state VOC rules in effect on October 1, 2008.

General Purpose Epoxy— Bond aluminum, brass, copper, stainless steel, steel, ABS, polystyrene, PVC, sheet moulding compound, ceramic, fiberglass (FRP), rubber, and wood (unless noted). Temp. range is –67° to +266° F except for 66135A22, which has a –40° to +140° F range.

Loctite® Hysol® No. 1C™ General Purpose Epoxy— Bonds metal, plastic, and wood. Temperature range is –65° to +300° F.

Loctite® Hysol® No. 608™ Fast-Setting Epoxy— Provides optical clarity. Bonds metal and plastic. Temp. range is –65° to +130° F.

♥ Not for brass, stainless steel, polystyrene, PVC, and ceramic.
● Not for ABS, sheet moulding compound, ceramic, and rubber.

Epoxy for Food-Processing Applications

Designed for use with food-processing and packaging equipment and biomedical instruments. This two-part adhesive resists water, weather, petroleum solvents, lubricants, mild acids and alkalies, and other organic and inorganic compounds. Bonds aluminum, stainless steel, steel, polycarbonate, vinyl, ceramic, fiberglass (FRP), and glass. Begins to harden in 2 hours; reaches full strength in 18 hours. Temp. range is –103° to +293° F. Mix ratio is 2:1. Color is amber. Developed in accordance with Title 21 U.S. Code of Fed. Reg., FDA Chapter 1, Sub B Sec. 175.105 and 175.300. This product is compliant under all state VOC rules in effect on October 1, 2008.

Size refers to combined amount of resin and hardener.

1.4-oz. Dual-Pouch Packet ..... 66525A21 **Each** $21.53
1-lb. Container ..... 66525A22 **Each** $68.50

Epoxies for Bonding PTFE

Epoxies

Use on etched/treated fluoropolymers such as FEP, PFA, PTFE, and TFE as well as ETFE (Tefzel) and ECTFE (Halar). Also bond aluminum, brass, copper, stainless steel, steel, ceramic, glass, and wood. This product is compliant under all state VOC rules in effect on October 1, 2009.

Treating Agent— Must use with the regular and the high-temperature epoxies to make fluoropolymer surfaces bondable. Comes in a 1-pint can. Covers approximately 50 sq. ft.

7607A14 ..... **Each** $66.64

Regular Epoxy— Includes a 17½-oz. can of resin and 15-oz. can of hardener. Begins to harden in 45 minutes; reaches full strength in 7 days. Color is purple when hardened. Mix ratio is 1:1. Applied at 4 to 6 mil thick, it covers approximately 80 sq. ft. Temperature range is –40° to +250° F.

7607A12 ..... **Each** $112.33

High-Temperature Epoxy— Resists temperatures up to 500° F and chemicals. Includes a 12½ oz. can of resin and 3½ oz. can of hardener. Mix ratio is 3½:1. Begins to harden in 16 hours at room temperature; reaches full strength in 8 hours at 250° F (less time at higher temperatures). Color is light brown when fully hardened. Applied at 4 to 6 mil thick, it covers approximately 80 sq. ft. Temperature range is –65° to +500° F.

7607A13 ..... **Each** $311.08

Bonding Kits

Kits contain both etching solution and epoxy to make bonding simple. Epoxy begins to harden in 30-40 minutes; reaches full strength in 24 hours. Temperature range is –40° to +350° F. Color is amber. This product is compliant under all state VOC rules in effect on May 1, 2010.

Standard Bonding Kit— Includes one 2-oz. bottle of etching solution, one 1.7-oz. cartridge of epoxy (7513A1 on this page), and a matching plunger for the cartridge. Kit covers approximately 1.5 sq. ft.

7607A15 ..... **Each** $128.33

Deluxe Bonding Kit— Includes two 4-oz. bottles of etching solution and one 1.7-oz. cartridge of epoxy (7513A1 on this page). Covers approximately 3 sq. ft. Mix ratio is 2:1.

Use ***applicator gun*** and ***mixer nozzle*** (both sold separately) to mix and dispense. Gun includes 1:1 and 2:1 mix ratio plungers.

Kit ..... 7807A11 **Each** $242.00
Applicator Gun ..... 74695A71 **Each** $27.74
Mixer Nozzles ..74695A12■ **Each** Partial Pkg. $1.21 Full Pkg. $0.91
■ Full pkg. is 12.

For information about adhesives, see page 3400.

Loctite® Hysol® Adhesives for Encasing (Potting) Electronics

Use these two-part adhesives for encasing (potting) electronic components in adhesive, to create small castings, or to bond heat sinks to heat-dissipating electronic components. Come in a 1.69-oz. (50 ml) cartridge. These products are compliant under all state VOC rules in effect on October 1, 2008.

Use an ***applicator gun*** and a ***mixer nozzle*** (both sold separately) to mix and dispense. Gun includes 1:1 and 2:1 mix ratio plungers.

Epoxies

E-60NC™—Acts as an electrical insulator.

ES1001™—Thin for easy flow. Good for impregnating applications with small tolerances.

ES1004™—Meets flame-out or self-extinguishing needs according to ASTM D635; meets UL 94V0.

ES1901™—Sets fast and forms ultra-clear bond lines. Ideal for ceramic, metal, plastic, rubber, wood, and flexible circuits.

ES1902™—Transparent for potting and laminating applications where clarity and excellent electrical and mechanical properties are required. Bonds plastic and metal.

ES2500™—Resilient and fast gelling, it's great for potting and encapsulating high-volume parts. Meets UL 94HB flame retardant properties.

Urethanes

US1150™—For electronics, telecommunications, and automotive components. Provides environmental hazard protection.

US1152™—For electronic assemblies. Provides environmental hazard protection.

US1750™—Clear, fast-hardening, medical-grade adhesive. Use for medical devices.

US2650™—Flame retardant. Good for electrical assemblies.

US2651™—Ideal for automotive applications in severe environments such as under the hood.

★ The ability to withstand voltage without rupture. ♣ Reaches full strength with heat; 2 hours at 176° F plus 2 hours at 302° F.

Loctite® Tak Pak® Wire Tacking Kits

Great for electronic repair and assembly. These instant adhesives are nonconductive and ideal for insulating, securing hardware to printed circuit boards, and encasing an item in adhesive (potting), unless noted. Begin to harden in 30 seconds; reach full strength in 24 hours. Thermal conductivity is 0.1 W/m°K. These products are compliant under all state VOC rules in effect on October 1, 2008.

Use ***Loctite® 382™*** when temperature fluctuation is a concern. A thick, slow-flowing formula, it fills spaces up to 0.008″. Temperature range is –65° to +180° F. Dielectric strength (the ability to withstand voltage without rupture) is 634 volts/mil.

Loctite® 444™ is a thinner formula; it fills spaces up to 0.007″. Temperature range is –65° to +180° F. Dielectric strength is 929 volts/mil. Meets Commercial Item Standard A-A-3097.

Loctite® 7452™ accelerator decreases adhesive's hardening time. ***Kits*** include adhesive and accelerator.

3M Scotch-Weld Electrical Insulating Adhesive for Encasing (Potting)

Ideal for bonding electrical components, this two-part adhesive is also thick for encasing items in adhesive (potting). Resists heat and retains insulation properties under high humidity. Bonds aluminum, brass, copper, stainless steel, steel, ABS, acrylic, polycarbonate, ceramic, fiberglass (FRP), glass, and rubber. Begins to harden in 60-70 minutes; reaches full strength in 48 hours. Mix ratio is 1:1. Dielectric strength (the ability to withstand electrical voltage without rupture) is 850 volts/mil. Meets UL 94HB. These products are compliant under all state VOC rules in effect on October 1, 2008.

Comes in a dual-cylinder cartridge. Use an ***applicator gun*** and a ***mixer nozzle*** (both sold separately) to simultaneously mix and dispense. Guns include 1:1 and 2:1 mix ratio plungers.

Heat-Transfer Epoxy for Encasing (Potting)

Epoxy draws heat away from parts and won't crack during thermal expansion, making it ideal for small electronic castings and for encasing items in adhesive (potting). This two-part epoxy resists weather, water, vapors, petroleum lubricants, and mild acids and alkalies. Thin for easy flow. Temp. range is –40° to +212° F. Mix ratio is 2:1. Color is black.

Thermal conductivity is 7-8 Btu-in./ft.^{2}-hr.-° F. Dielectric strength (the ability to withstand electrical voltage without rupture) is 520 volts/mil.

This product is compliant under all state VOC rules in effect on October 1, 2008.

Use an ***applicator gun*** and a ***mixer nozzle*** (both sold separately) to mix and dispense simultaneously. Gun includes 1:1 and 2:1 mix ratio plungers.

Size	Begins to Harden	Reaches Full Strength		Each

Electrical Insulating Epoxy

Ideal for attaching transistors, diodes, resistors, and other heat-sensitive components to printed circuit boards. This smooth two-part paste draws heat away from parts; maintains electrical insulation; and resists salt solutions, mild acids, and alkalies. Bonds aluminum, stainless steel, steel, polycarbonate, ceramic, glass, sapphire, and silica. Begins to harden in 90 minutes; reaches full strength in 24 hours.

Comes in a dual-pouch packet with resin and hardener already measured. To use, remove the clip separating resin and hardener, mix contents inside, and dispense. Temp. range is –94° to +239° F.

Thermal conductivity is 6-7 Btu-in./ft.^{2}-hr.-° F. Dielectric strength (the ability to withstand electrical voltage without rupture) is 410 volts/mil.

This product is compliant under all state VOC rules in effect on October 1, 2008.

1.4 oz. ..... 66395A11 **Each** $18.92

Protective Coatings for Circuit Boards

Both come in a 12-oz. aerosol can and reach full strength in 24 hours. These products are compliant under all state VOC rules in effect on October 1, 2008.

Silicone—This durable coating is perfect for harsh environments. It has excellent resistance to vibration, moisture, chemicals, and rapid temperature changes. Temp. range is –85° to +392° F. Dielectric strength (the ability to withstand electrical voltage without rupture) is 1,100 volts/mil. UL recognized.

Acrylic—Reaches full strength quickly and resists moisture and vibration. Temp. range is –85° to +257° F. Dielectric strength is 1,000 volts/mil.

Silicone ..... 6801A37 **Each** $28.09

Acrylic ..... 6801A39 **Each** $27.59

For information about adhesives, see page 3400.

Silver-Filled Conductive Epoxies

Use these two-part epoxies for chip and substrate bonding, interference shielding, and electrical circuit repairs. Bond aluminum, copper, brass, stainless steel, and steel. Begin to harden in 2 to 3 hours; reach full strength in 5 days. Maximum temperature is 266° F. Each part comes in a jar; mix ratio is 1:1. These products are compliant under all state VOC rules in effect on October 1, 2008.

Semiflexible— Thick for use on vertical surfaces. Thermal conductivity is 40 Btu-in./ft.^{2}-hr.-°F. Electrical resistivity is <0.0002 ohms-cm.

Flexible— Flexes without delamination or loss of conductivity. Bonds dissimilar materials, such as alumina to aluminum and silicon to copper. Thermal conductivity is 55 Btu-in./ft.^{2}-hr.-°F. Electrical resistivity is <0.0004 ohms-cm.

Size ♦	Approx. Coverage @ 0.010″ Thick.	Color	Semiflexible	Semiflexible Each	Flexible	Flexible Each
½ oz.	90 sq. in.	Silver	7595A31	$80.58	7595A33	$80.58
1 oz.	180 sq. in.	Silver	7595A32	161.15	7595A34	161.15

♦ Combined amount of resin and hardener.

Silver-Filled Conductive Adhesive Pen

Bond surface-mount components and repair electronic connections on circuit boards quickly and easily with a pen that dispenses a silver-filled conductive epoxy. Also, make quick, highly conductive silver connections (traces) and link components. Begins to harden immediately; reaches full strength in 24 hours. Temp. range is –67° to +302° F. Color is silver. This product is compliant under all state VOC rules in effect on October 1, 2008.

0.165 oz. ..... 7365A44 **Each** $30.07

Silver-Filled Conductive Epoxies in Easy-Mix Packs

Resin and hardener come measured in a dual-pouch packet; just open and dispense. Epoxies make electrically and thermally conductive bonds between aluminum, stainless steel, steel, laminates, polycarbonate, and ceramic. Bond electronic components; seal and repair electrical modules, printed circuits, flat cable, and high-frequency shields; and "cold" solder heat-sensitive materials. At 1-mil thick, 0.09 oz. will cover approximately 61 sq. in. These products are compliant under all state VOC rules in effect on October 1, 2008.

Rigid— Temperature range is –76° to +257° F. Thermal conductivity is 42 Btu-in./ft.^{2}-hr.-° F. Electrical resistivity is 0.009 ohms-cm.

Flexible— Temperature range is –76° to +230° F. Thermal conductivity is 10 Btu-in./ft.^{2}-hr.-° F. Electrical resistivity is 0.001 ohms-cm.

Loctite® 3888™— Temperature range is –13° to +176° F. Thermal conductivity is 10 Btu-in./ft.^{2} -hr.-° F. Electrical resistivity is 0.001 ohms-cm.

High-Temperature Adhesives and Repair Putties

Epoxy— This two-part electrically insulating epoxy resists high temperatures and acids. *1-pt. epoxy* has 1-pt. jar of resin and 3-oz. jar of hardener; *1-gal. epoxy* has 1-gal. jar of resin and 1-pt. jar of hardener. Mix ratio for both is 100:8. These products are compliant under all state VOC rules in effect on October 1, 2008.

Repair Epoxy— Permanently repair leaks in valves, fittings, and shafts. This aluminum-filled two-part epoxy resists corrosion and at full strength can easily be machined, tapped, and drilled. Bonds bronze, copper, stainless steel, ABS, acrylic, polycarbonate, PVC, ceramic, fiberglass (FRP), and glass. *1-lb. epoxy* includes a 0.9-lb. jar of resin and a 0.1-lb. bottle of hardener. Mix ratio is 100:11. *Kit* includes 1-oz. syringe of aluminum-filled epoxy resin, ½-oz. syringe of epoxy hardener, sandpaper, reinforcement screen, and mixing sticks. Mix ratio is 2:1.

Adhesive for Insulating Materials— Bond porous insulating materials such as calcium-silicate insulation with this silicate-based adhesive.

Repair Putty for Cast Aluminum— Also known as Pyro-Putty, this two-part adhesive seals cracks, holes, and pits in metals exposed to extremely high temperatures. Machinable at full strength. Includes a powder and a liquid that forms a ceramic- and aluminum-filled thick putty. Apply up to ½″ thick. Mix ratio is 2:1.

Repair Putty for Cast Iron, Stainless Steel, and Steel— Also known as Pyro-Putty, this ceramic- and stainless steel-filled one-part putty seals cracks, holes, and pits in metals exposed to extremely high temperatures. Machinable at full strength. Apply up to ⅜″ thick. *8-oz.* size includes 4 oz. of thinner so you can change the viscosity.

Gasket-Sealing Silicate Adhesive— A thick adhesive for sealing fiberglass (FRP) gaskets into stove doors, sealing cracks in metal, and for filling gaps.

Gasket Cement Silicate Adhesive— Easy-flow adhesive for bonding fiberglass (FRP) gaskets to steel and cast iron stoves.

Ceramic Adhesives— Get excellent electrical insulation and bond strength. Bond ceramic, iron, lead, and steel. Use on diesel engines, exhaust systems, and gas turbines. Can also be used with silica gasketing and to coat furnace linings. Resist oil, gasoline, acids, and alkalies.

Ceramic Putty— Adheres to all porous surfaces and can be used as thermal insulation on brick, mortar, burner blocks, furnace holders, and thermocouples.

Zirconia Adhesive— This paste forms a hard surface and resists rapid temperature changes, molten metals, and most chemicals. Bonds ceramic, glass, metals, and graphite. It also serves as a corrosion-resistant coating for graphite, ceramic, and thermocouples.

Devcon Zip Repair Patch

Make waterproof repairs to pipes, tanks, drums, and containers. This 4″×9″ patch bonds aluminum, iron, stainless steel, steel, titanium, ABS, acrylic, PVC, ceramic, composites, fiberglass (FRP), and wood. Paint, sand, machine, tap, or drill at full strength. Begins to harden in 10 to 15 minutes; reaches full strength in 4 hours. Temperature range is –40° to +200° F. Includes activator spray and gloves. Color is brown. This product is compliant under all state VOC rules in effect on October 1, 2008.

Devcon No. 11500 ..... 7790A21 **Each** $49.94

Loctite® Quick-Metal® 660™

Restore correct fit on worn shafts, spun bearings, damaged keyways, and cylindrical parts. This paste resists oils, cutting fluids, and chlorinated solvents. Begins to harden in 20 minutes; reaches full strength in 24 hours. Fills spaces up to 0.020″. Temp. range is –65° to +300° F. Color is silver. This product is compliant under all state VOC rules in effect on October 1, 2008.

0.20-oz. (6 ml) Tube ..... 7570A27 **Each** $8.22
1.69-oz. (50 ml) Tube ..... 7570A26 **Each** $38.75

For information about adhesives, see page 3400.

Devcon Metal-Filled Epoxies

Get metal bonds that resist corrosion and most chemicals. Plus, these two-part epoxies can be machined and tapped at full strength (unless otherwise stated). These products are compliant under all state VOC rules in effect on October 1, 2008. *Putty* and *paste* are for vertical and overhead work and for filling gaps up to 1/4″. *Liquid* can be used as a filler or leveling compound and for making reproductions of fixtures, dies, and molds.

(A) Alumina— Repairs cracks and leaks on ferrous and nonferrous metal pipes, chutes, tanks, and bearing housings.

(B) Aluminum— Bond aluminum, copper, iron, stainless steel, steel, ceramic, concrete, fiberglass (FRP), and wood (unless noted).

(C) Bronze— Repairs and rebuilds brass, bronze alloys, copper, and ferrous metal shafts and castings.

(D) Metal Patch— This one-part waterproof epoxy is ideal for sealing and filling. Bonds aluminum, brass, copper, iron, stainless steel, and steel. Patch is not metal-filled and cannot be machined or tapped.

(E) Plastic Steel— Patch, repair, and rebuild jigs, fixtures, castings, and machinery. Bond aluminum, brass, cast iron, copper, stainless steel, ceramic, concrete, and wood (unless noted).

(F) Stainless Steel— Repairs stainless steel pipes, tanks, valves, chutes, ductwork, and conveyors. It resists chemicals and water and is NSF 61 certified for use on drinking water systems and components.

(G) Titanium— Repair pumps and hydraulic rams and rebuild scored shafts, rings, and pump impellers.

♦ Combined amount of resin and hardener. ● Not for concrete. ★ Not for ceramic or wood.

Loctite® Fixmaster® Metal- and Ceramic-Filled Epoxies

At full strength, these two-part epoxies (unless noted) can be machined, drilled, and tapped. These products are compliant under all state VOC rules in effect on October 1, 2008.

(H) Aluminum— Bond aluminum parts and form a nonrusting finish.

(J) Steel— Bond cast iron, stainless steel, steel, concrete, and clean aluminum, bronze, and copper. *97483* and *97484* are pourable for making castings and filling voids. *98853* is for stopping leaks in pipes and tanks and repairing defects in castings. Hardens on wet and underwater surfaces. NSF 61 certified for use in drinking water systems and components. *99913* and *99914* rebuild worn parts and dies. Have extremely strong adhesion.

(K) Stainless Steel— Bonds cast iron, stainless steel, steel, concrete, and clean aluminum, bronze, and copper.

(L) Ceramic— Excellent wear and abrasion resistance on ceramic parts. *97473* is also silicon/iron filled for abrasion resistance. Also resists corrosion and chemicals.

♦ Combined amount of resin and hardener. ♣ One-part stick epoxy.

Metal-Filled Epoxies

Make strong metal bonds that resist corrosion and most chemicals. Plus, these two-part epoxies can be machined and tapped at full strength. Filled with aluminum, these epoxies bond aluminum, copper, iron, stainless steel, steel, and fiberglass (FRP) (unless noted). Thick for vertical and overhead use; fill gaps up to 1/4″. These products are compliant under all state VOC rules in effect on October 1, 2008.

Form	Size ♦	Begins to Harden	Reaches Full Strength	Temp. Range	Color	Mix Ratio		Each

♦ Combined amount of resin and hardener. ▲ Not for copper or stainless steel.

Aluminum and Stainless Steel Repair Kit

Repair castings, fill dents, and patch holes in aluminum and stainless steel with this two-part epoxy. Includes one 0.88-oz. (25 g) tube of resin, one 0.88-oz. (25 g) tube of hardener, sandpaper, two mixing sticks, an applicator brush, and a 2″×4″ reinforcement screen. Begins to harden in 6-8 minutes; reaches full strength in 24 hours. Can be sanded and painted at full strength. Mix ratio is 1:1. Temp. range is –60° to +175° F. Color is silver. This product is compliant under all state VOC rules in effect on October 1, 2008.

65975A11 ..... Each $14.48

Bondo Body and Repair Filler

Easily and quickly repair aluminum, steel, concrete, fiberglass (FRP), and wood. This two-part filler is easy to spread, hardens quickly, doesn't shrink, and can be sanded and shaped. Begins to harden in 5 minutes; reaches full strength in 1 hour. Color is gray. This product is compliant under all state VOC rules in effect on October 1, 2008.

Size ♦	Approx. Coverage	Temp. Range		Each
1 Pint	64 sq. in. @ 1/8″ Thick	–40° to +180° F	92930A410	$12.07
1 Quart	128 sq. in. @ 1/8″ Thick	–40° to +180° F	92930A420	17.80
1/2 Gallon	256 sq. in. @ 1/8″ Thick	–40° to +180° F	92930A430	26.09
1 Gallon	512 sq. in. @ 1/8″ Thick	–40° to +180° F	92930A440	30.80

♦ Combined amount of resin and hardener.

For information about adhesives, see page 3400.

Leak and Crack Sealing Sticks

These products are compliant under all state VOC rules in effect on October 1, 2008.

Heat-Activated Stick— Permanently seal leaks and cracks in aluminum, copper, steel, glass, and ceramics. Just heat the area to be repaired with a heat gun or torch (at 250° F) to melt stick. It melts, seals, and reaches full strength in 90 seconds. At full strength the seal withstands 600 psi and temperatures up to 350° F. Color is green. NSF 61 certified.

3/8-oz. Stick ..... **7703A1** **Each** $16.97

Stop-a-Leak Stick— Temporarily stop leaks immediately in oil and gas tanks, transmissions, and oil-filled transformers until a permanent repair can be made. Sealer is applied externally, so there is no need to drain contents. Withstands up to 15 psi and is weather resistant. Temperature range is –50° to +150° F. Color is gray.

1 1/4-oz. Stick ..... **7703A2** **Each** $12.60

Epoxy Repair Putties

Fill holes on damp and underwater surfaces with these easy-mix, two-part epoxy sticks. Just cut the desired amount and knead to a uniform color; all have both parts in one stick except standard. Putties can be drilled, tapped, and sanded at full strength. At 1/8″ thick, 4 oz. covers approximately 32 sq. in. These products are compliant under all state VOC rules in effect on October 1, 2008.

Standard— Includes a 1/2-lb. stick each of resin and hardener; cut and knead together. Mix ratio is 1:1. Bonds aluminum, copper, steel, ceramic, concrete, glass, plaster, and wood. Maximum temperature is 250° F.

Loctite® 82093— Can be applied under water. Bonds aluminum, brass, copper, steel, ABS, acrylic, polycarbonate, rigid vinyl, fiberglass (FRP), ceramic, concrete, and wood. Maximum temperature is 300° F.

High Temperature— Withstands temperatures up to 450° F and repairs iron pipe, tanks, castings, and ductwork. Bonds aluminum, iron, ABS, acrylic, rigid PVC, ceramic, fiberglass (FRP), stone, and wood.

Steel— Use on aluminum, copper, magnesium, nickel, stainless steel, steel, and titanium. NSF 61 certified for use in drinking water systems and components. Maximum temperature is 250° F.

Plastic— Use to seal leaks and repair any rigid or semiflexible plastic such as ABS, CPVC, and PVC. Does not bond polyethylene and polypropylene. NSF 61 certified for use in drinking water systems and components. Maximum temperature is 250° F.

Copper— Repairs cracks in pipes, tanks, vessels, elbows, joints, sleeves, sink traps, and water heaters made of bronze, brass, copper, and other nonferrous metals. NSF 61 certified for use in drinking water systems and components. Maximum temperature is 250° F.

	Stick Size	Begins to Harden	Reaches Full Strength	Color		Each

Copper	4 oz.	3 min.	24 hrs.	Copper	**66145A3**	8.19

Underwater Repair Epoxy

Your surface can be dry, wet, or even under water—this two-part epoxy paste will still bond brass, bronze, copper, stainless steel, steel, ABS, acrylic, polycarbonate, cement, concrete, fiberglass (FRP), and wood. Ideal for repairing pipe fittings, valves, pumps, and tanks. Resists alkalies, solvents, gasoline, and oil. At full strength it can be machined, sanded, drilled, tapped, and painted. Temp. range is 50° to 210° F. The *24-oz. size* covers approximately 1.65 sq. ft. at 1/8″ thick.

This product is compliant under all state VOC rules in effect on October 1, 2008.

Size	Begins to Harden	Reaches Full Strength	Mix Ratio	Color		Each
12 oz.	30 min.	24 hrs.	1:1	White	**7521A14**	$17.92
24 oz.	30 min.	24 hrs.	1:1	White	**7521A12**	26.88
48 oz.	30 min.	24 hrs.	1:1	White	**7521A13**	44.81

Epoxy Fiberglass Repair Patches

Here's everything you need to repair fiberglass (FRP) pipes, hose, conduit, tanks, industrial containers, and vehicle bodies. Patches also bond aluminum, steel, ABS, acrylic, polystyrene, rigid PVC, concrete, rubber, and wood. Come in a dual-pouch containing an epoxy-coated fiberglass patch and resin—simply remove the clip and knead together in the pouch. At full strength, patches can be sanded and painted. Temp. range is –85° to +325° F. Include a pair of disposable gloves. These products are compliant under all state VOC rules in effect on October 1, 2008.

Patch Size	Begins to Harden	Reaches Full Strength	Color		Each
2″×12″	1-3 min.	24 hrs.	Red	**74645A75**	$7.50
2″×20″	1-3 min.	24 hrs.	Amber	**74645A76**	9.18
4″× 6″	1-3 min.	24 hrs.	Blue	**74645A77**	7.50
4″×12″	1-3 min.	24 hrs.	Green	**74645A78**	9.18

Leak Repair Kit

Stop leaks in tanks and equipment without draining the contents. Rub the included 1 1/4-oz. paste stick into the leak until it stops. Then use the included 1-oz. jar of two-part epoxy to permanently seal it. Ideal for metal tanks and drums and concrete floors. Seal withstands up to 15 psi and temperatures up to 250° F. Resists acids, alkalies, degreasers, and solvents. Epoxy begins to harden in 30 minutes; reaches full strength in 24 hours. Color is black. This product is compliant under all state VOC rules in effect on October 1, 2008.

7582A44 ..... **Each** $66.16

West Systems Fiberglass Repair Epoxy

Durable and water resistant, this two-part epoxy is the ideal choice for repairing fiberglass (FRP), even in marine environments. Also bonds aluminum, lead, stainless steel, steel, ABS, PVC, and wood. Begins to harden in 9-12 minutes; reaches full strength in 1-4 days. Temperature range is 40° to 90° F. Mix ratio is 5:1. Color is amber. This product is compliant under all state VOC rules in effect on October 1, 2008.

Kit contains six 0.63-oz. (18 g) packets of 105-A resin, six 0.17-oz. (4.7 g) packets of 205-A hardener, one 0.2-oz. (6 g) cup of 406-2 filler, one 0.4-oz. (12 g) cup of 407-5 filler, two brushes, four mixing sticks, four mixing cups, four cleaning pads, two pipe cleaners, a 4″×12″ fiberglass cloth, a syringe dispenser, and gloves.

	Size		Each

♠ Six packets of 105-A resin and six packets of 205-A hardener.

Fiberglass and Metal Repair Kit

Make strong, water-resistant repairs to fiberglass (FRP), aluminum, brass, bronze, stainless steel, steel, and wood with this two-part epoxy. Repairs 3″ to 4″ long cracks and fills gaps up to 1 1/4″. Kit contains 1 oz. of resin, 1 oz. of hardener, 1 sq. ft. of woven fiberglass cloth, a spreader, a mixing stick, and instructions. Begins to harden in 20 minutes; reaches full strength in 12 hours. Temperature range is –60° to +180° F. Mix ratio is 1:1. Color is clear with a slight yellow tint. This product is compliant under all state VOC rules in effect on October 1, 2008.

7597A34 ..... **Each** $12.40

Light-Activated Fiberglass Repair Putties and Patch

Permanently repair fiberglass (FRP) with help from the sun or a UV lamp. These products are compliant under all state VOC rules in effect on October 1, 2008.

Putties— Use on fiberglass (FRP), metal, wood, and all plastics except polystyrene. Drill, tap, sand, and paint at full strength. Apply at –20° to +120° F. 3.5 oz. covers approximately 49 sq. in. at 1/8″ thick.

Polyester resin filler fills gaps up to 3/4″. Begins to harden in 30 seconds; reaches full strength in 3 min. Operating temperature is –20° to +200° F.

Vinyl ester epoxy resin filler has higher strength, better adhesion, and more corrosion resistance than the polyester resin filler. Fills gaps up to 1/2″. Begins to harden in 30 seconds; reaches full strength in 5 minutes. Operating temperature is –20° to +250° F.

Patch— Made of fiberglass-reinforced polyester and is waterproof. Repairs fiberglass (FRP), metal, plastic, concrete, rubber, and wood. Cut to desired size, peel off backing, and press onto surface. Drill, sand, and paint at full strength. Reaches full strength in 5-15 minutes in the sun; 15-30 minutes under a UV lamp. Operating temp. is –40° to +350° F.

	Size	Color		Each
Polyester Putty	3.5-oz. Tube	Translucent	**73475A12**	$10.42
Vinyl Ester Epoxy Putty	3.5-oz. Tube	Lt. Yellow	**73475A14**	12.50
Patch	6″×3″	Yellow	**7737A21**	8.90

Windshield/Glass Repair Kit

Prevent "bull's-eye" breaks, minor chips, and scratches from getting bigger. Not for long cracks. Includes a 0.17-oz. syringe of acrylic adhesive and accessories to complete the repair. Reaches full strength in 30 minutes when exposed to natural light. Temperature range is –60° to +150° F. This product is compliant under all state VOC rules in effect on October 1, 2008.

7557A33 ..... **Each** $17.58

Super Glues

For information about adhesives, see page 3400.

About Super Glue Viscosity

Viscosity measures fluid thickness in *centipoise* (cp). Some examples of approximate viscosity are: water (1-5 cp); antifreeze (15 cp); corn oil (50-100 cp); maple syrup (150-200 cp); honey (2,000-3,000 cp); molasses (5,000-10,000 cp). A viscosity of "gel" has a consistency similar to ketchup (50,000-75,000 cp).

Loctite® Black Max® and Prism® Super Glues

Tube *Bottle*

Instant adhesion on difficult-to-bond surfaces with impact and vibration resistance. Excellent on a variety of porous and nonporous surfaces, these glues bond aluminum, brass, copper, stainless steel, steel, ABS, polycarbonate, polystyrene, PVC, Garolite (phenolic laminates), and rubber. Reach full strength in 24 hours. These products are compliant under all state VOC rules in effect on October 1, 2008.

Black Max®— Excellent resistance to peeling, impact, and temperature changes.

Surface Insensitive— Surfaces require less surface preparation with these adhesives. They provide quick bonding for rough, porous surfaces; also bond wood, leather, paper, foam, and freshly plated parts. *No. 406*™ meets Commercial Standard A-A-3097.

Impact Resistant— Provide strong bonds with higher impact and peeling resistance than other instant adhesives. *No. 480*™ is NSF 61 certified for use with drinking water.

Flexible— Provide a flexible bond line. Good on porous and absorbent materials like paper, leather, and fabric.

Low-Odor Nonwhitening— Form a neat clean bond. Perfect for assemblies where appearance is important. Do not have the strong odor commonly associated with super glues.

Thermal Resistant— Strong bonds even when exposed to elevated temperatures. Good impact and heat resistance.

(50 ml) tube of No. 518™ Gasket Eliminator®; 4.5-oz. aerosol of 7649™ Primer N™; and plastic case. This product is compliant under all state VOC rules in effect on October 1, 2008.

Loctite No. 00101 ..... 7458A65 **Each** $94.93

3M Scotch-Weld Super Glues

Tube *Bottle*

Use for quick, strong bonds on aluminum, brass, cold-rolled steel, copper, stainless steel, steel, ABS, acrylic, flexible vinyls, Garolite (phenolic laminates), polycarbonate, polyester, fiberglass (FRP), and rubber. All reach full strength in 24 hours. Temperature range is –65° to +180° F (unless noted). Color is clear. These products are compliant under all state VOC rules in effect on October 1, 2008.

CA4 Rubber— Fast hardening with excellent adhesion to cured rubber. Viscosity is 150 cp.

CA5 Slow-Hardening Rubber— The slower working version of CA4. Better for filling spaces and bonding rough or uneven surfaces. Viscosity is 2,000 cp.

CA7 Shock Resistant— Fast hardening with good shock and impact resistance. Viscosity is 15-40 cp.

CA8 Shock Resistant— Fast hardening. Viscosity is 70-130 cp.

CA9 Slow-Hardening Shock Resistant— Slower working version of CA8. Suitable for wire tacking and coil terminating when used with 021200-87937-1 Surface Activator (sold separately). Viscosity is 1,000-1,700 cp.

CA40 Difficult-to-Bond Materials— Viscosity is 20 cp.

CA40H High-Viscosity Difficult-to-Bond Materials— Thicker version of CA40. Good resistance to soap solutions and isopropyl alcohol. Viscosity is 400-600 cp.

CA50 Gel— Very high-viscosity (45,000-85,000 cp) gel; great for vertical applications and for filling spaces of up to 0.02″ between surfaces.

CA100 High-Viscosity High Strength— Strong adhesion with high impact strength and resistance to peeling, heat, and rapid temperature changes. Viscosity is 2,500-4,500 cp.

021200-87937-1 Surface Activator— Primes the surface and increases hardening speed.

♣ Meets Commercial Standard A-A-3097. ★ Temp. is –65° to +250° F.

For information about adhesives, see page 3400. For information about viscosity, see page 3410.

Loctite® Super Bonder® Super Glues

Don't just bond...super bond. In less than two minutes you can have strong bonds on nonporous, closely mated parts. Bond aluminum, stainless steel, steel, zinc, ABS, polycarbonate, PVC, Garolite (phenolic laminates), and rubber. Reach full strength in 24 hours. Temperature range is –65° to +180° F (unless otherwise stated). Color is clear. These products are compliant under all state VOC rules in effect on October 1, 2008. All except 409™, 498™, and 499™ meet Commercial Standard A-A-3097.

Quick Set™ 404™—All-purpose adhesive; ideal for bonding rubber and O-rings.

Super Bonder® 409™—Excellent for filling space between surfaces without losing bonding strength. Plus, it won't run, even on vertical and overhead surfaces. Also bonds porous surfaces such as ceramic, cork, and leather.

Super Bonder® 414™—Creates strong bonds on plastic and vinyl and resists weather.

Super Bonder® 415™—General purpose adhesive; good for bonding metal.

Super Bonder® 416™—High-viscosity for semiporous and irregular surfaces.

Super Bonder® 420™—Low viscosity, so it easily penetrates assembled parts. Also bonds elastomers.

Super Bonder® 422™—High viscosity; good for bonding plastics.

Super Bonder® 430™—Highly effective on metallic surfaces.

Super Bonder® 493™—Very low viscosity; good for bonding metal.

Super Bonder® 495™—General purpose for a wide variety of applications. Replaces two-part epoxies, hot-melt double-face adhesives, and adhesives that require heat to strengthen.

Super Bonder® 496™—General purpose adhesive; ideal for bonding rubber.

Super Bonder® 498™—Resists humidity and temperature changes.

Super Bonder® 499™—A much thicker version of 498™ for use on vertical surfaces. Temp. range is –65° to +200° F.

Permabond Super Glues

Bond aluminum, brass, stainless steel, steel, ABS, acrylic, acetal, nylon, polystyrene, Garolite (phenolic laminates), and rubber. Reach full strength in 24 hours. Minimum temperature is –65° F. Color is clear. These products are compliant under all state VOC rules in effect on October 1, 2008.

Standard Adhesives

101 and *105 General Purpose* meet MIL-A-46050C, Type II, Class I.

102 General Purpose meets MIL-A-46050C, Type II, Class II.

200, 240, and *268 Space Filling* have a high viscosity for flow control and filling spaces. 268 meets MIL-A-46050C, Type II, Class III.

910 General Purpose meets MIL-A-46050C, Type I, Class II.

910 FS Fast is a low-viscosity version that begins to harden faster. Meets MIL-A-46050C, Type I, Class I.

High-Temperature Adhesives

All except 820 must be heated to 302° F for two hours to withstand max. temp.; max. temp. is 180° F when cured at room temperature.

820 General Purpose makes strong bonds at high temperatures.

919 General Purpose has a low viscosity to penetrate assembled parts. Meets MIL-A-46050C, Type V, Class I.

920 General Purpose meets MIL-A-46050C, Type V, Class II.

922 Space Filling has a high viscosity for flow control and filling spaces. Perfect for encasing an item in adhesive (potting) and bonding heat sinks. Meets MIL-A-46050C, Type V, Class III.

Skin Guard Super Glues

Stop gluing your fingers together—these adhesives bond metal, plastic, ceramic, glass, and rubber but not you. They fill gaps up to 0.031″. Begin to harden in 10 seconds; reach full strength in 2 minutes. Temp. range is –20° to +150° F. Come in 0.07-oz. (2 g) tube. Color is clear. These products are compliant under all state VOC rules in effect on October 1, 2008.

Liquid provides one-drop application. ***Gel*** is for porous surfaces.

Liquid (40 cp viscosity)	66185A11	Each	$2.47
Gel (7,000 cp viscosity)	66185A12	Each	$2.89

Medical Device Super Glues

For assembling medical devices, these glues meet USP Class 6 criteria for use on medical devices. Comparable to Loctite® series 4000 instant adhesive. Bond brass, chrome, copper, stainless steel, steel, ABS, acrylic, nylon, polycarbonate, polyester, fiberglass (FRP), rubber, and wood. Begin to harden in 15 seconds; reach full strength in 8 hours. Temperature range is –65° to +200° F. Come in 1-oz. squeeze bottles. These products are compliant under all state VOC rules in effect on October 1, 2008.

Note: Should not be used for implantation in the human body.

For information about adhesives, see page 3400. For information about viscosity, see page 3410.

Loctite® Medical Device Super Glues

Designed for rapid bonding of difficult-to-bond materials (metal, plastic, and rubber) often found in medical devices that require toxicity testing and sterilization. Adhesives are ISO 10993 compliant. These products are compliant under all state VOC rules in effect on October 1, 2008.

4011™ has low viscosity and is ideal for acidic surfaces and dry environments. ***4013™*** is for general purpose gap filling. ***4014™*** is for general purpose metal and plastic bonding. ***4206™*** is impact resistant and withstands continuous temperatures up to 250° F. Comes in a tube. ***4541™*** is a gel for use on acidic and porous surfaces. Comes in a tube.

Super Glues with Brush-On Applicator

A brush makes application clean and easy. Bond aluminum, brass, copper, stainless steel, steel, ABS, acrylic, nylon, polycarbonate, polyester, fiberglass (FRP), Garolite (phenolic laminates), rubber, and wood. Contain no solvents and are nonflammable. Come in 1-oz. bottles. Reach full strength in 8 hours and meet MIL-A-46050C (unless noted). These products are compliant under all state VOC rules in effect on October 1, 2008.

General Purpose— Offers good thermal and impact resistance. Temperature range is –65° to +200° F. Color is clear.

Surface Insensitive— Surfaces require less preparation with this glue. Great for acidic and porous surfaces as well as where humidity is very low. Temp. range is –65° to +200° F. Color is clear.

High Performance— Use in applications where higher temperatures, humidity, vibration, or impact may be present. Temperature range is –65° to +250° F. Color is black.

Nonirritating— Low odor for low-ventilation areas and no white residue for a better looking finish. Temp. range is –65° to +180° F. Color is clear.

Loctite® UV-Strengthening Adhesives

When exposed to ultraviolet (UV) light, these adhesives harden in seconds. These products are compliant under all state VOC rules in effect on October 1, 2008.

349™ Impruv® Optically Clear UV Adhesive— Use in moisture and humidity. This acrylic adhesive bonds and seals glass and metal. Color is light yellow.

352™ UV Structural Adhesive— Resists vibration and impact. This acrylic adhesive bonds and seals glass to glass, glass to metal, and metal-filled adhesive-coated materials. It can also be used to encase items in adhesive (potting). Color is amber. Bonding time can be accelerated with Activator 7075™ (sold separately).

3106™— This acrylic adhesive bonds rigid and flexible PVC to polycarbonate where gap filling and a flexible joint are needed. Color is transparent.

4305™— This cyanoacrylate adhesive is ideal for applications needing a quick hardening time. Bonds metal, plastic, and rubber. Color is transparent green.

Super Glue Remover

It may be super, but it doesn't have to be permanent. Apply this remover to clean and debond parts. *Note:* Not for use on acrylic plastics. This product is compliant under all state VOC rules in effect on October 1, 2008.

5-g Bottle ..... 7503A21 **Each** $2.40

Loctite® Speedbonder™ Adhesives

Good for smooth, nonporous surfaces and fitted parts that require a high-strength, impact- and shock-resistant adhesive. These two-step acrylic adhesives require a primer or activator to create adhesion. Bond glass, metal, and plastic. Reach full strength in 24 hours (unless otherwise stated). These products are compliant under all state VOC rules in effect on February 1, 2011.

Kits have Speedbonder™ 312™ adhesive and 736™ Primer NF™.

Speedbonder™ 312™— Good for rigid plastic. Bonds dissimilar materials such as metal, glass, or ceramic. Begins to harden in 30 seconds. Fills spaces up to 0.003″. Temperature range is –65° to +300° F. Color is amber. *Note:* Must be used with 736™ Primer NF™.

Speedbonder™ 324™— Good for rigid plastic. Also bonds magnets and mirrors to steel housings. Begins to harden in 5 minutes. Fills spaces up to 0.040″. Temperature range is –65° to +300° F. Color is amber. *Note:* Must be used with Activator 7075™.

Speedbonder™ 325™— For jobs that require superior resistance to temperature variations, weathering, and exposure to solvents. Begins to harden in 5 minutes. Fills spaces up to 0.040″. Temperature range is –65° to +300° F. Color is brown. *Note:* Must be used with Activator 7075™.

Speedbonder™ 326™— General purpose adhesive. Begins to harden in 1 minute. Fills spaces up to 0.020″. Temperature range is –65° to +250° F. Color is brown. *Note:* Must be used with 7649™ Primer N™.

Structural Adhesive 331™— Also bonds magnets. Begins to harden in 20 seconds; reaches full strength in 30 minutes. Fills gaps up to 0.040″. Temperature range is –40° to +350° F. Color is light yellow. *Note:* Must be used with Activator 7387™.

Structural Adhesive 392™— Also bonds magnets. Begins to harden in 1 minute. Fills spaces up to 0.025″. Temperature range is –65° to +250° F. Color is amber. *Note:* Must be used with Activator 7387™.

● Meets MIL-S-22473E. NSF 61 certified for use with drinking water.

Quick-Grip Temporary Adhesive Stick

Position washers and nuts easily—dab a small amount of adhesive on your fingertip or socket to temporarily hold small parts in place. Adhesive is noncorrosive, nonconductive, and won't harm sensitive electronics. Wipes cleanly off skin and tools with a soft cloth or washes off with mineral spirits. Slowly degrades after six months to one year. This product is compliant under all state VOC rules in effect on October 1, 2008.

2-oz. Stick ..... 6441A41 **Each** $12.50

For information about adhesives, see page 3400.

Loctite® Primers and Accelerators

These products are compliant under all state VOC rules in effect on February 1, 2011 (unless noted).

Primers and Accelerators for Super Glues— Increase hardening speed and ensure strong bonds.

736™ NF™ improves gap-filling capabilities.

770™ Prism® improves hold. Use for difficult-to-bond surfaces such as polyolefins, polypropylene, polyethylene, and thermoplastic rubber. Heptane based.

7701™ Prism® is for medical devices. Heptane based.

712™ Tak Pak® rapidly bonds wires and coils on circuit boards.

7113™ creates a smooth bond line for a better appearance.

7452™ Tak Pak® rapidly bonds electronic components.

Primers for Threadlockers and Retaining Compounds— Increase hardening speed and ensure strong bonds.

7088™ Quickstix™ is a solvent-free semisolid stick.

7090™ is solvent-free. It improves gap-filling capabilities.

7471™ T™ promotes bonds on stainless steel, titanium, and pure and anodized aluminum; speeds bonding on steel. Acetone/isopropanol based.

7649™ N™ is for large gaps and temperatures below 59° F. NSF 61 certified for use with drinking water. Replaces Loctite N 764.

Activators— Help structural adhesives (two-step acrylics) to bond.

7075™ is for large gaps. Replaces Loctite 707.

7109™ Tak Pak® II is nonflammable.

ODC-Free Cleaner— Cleans and degreases surfaces prior to applying adhesives. Contains no ODCs (ozone-depleting chemicals). Replaces Loctite 7070.

Threadlocking Adhesive Washers

Why bother applying a messy threadlocker? Let your washer be your adhesive. Washers are made of an epoxy adhesive that is activated when a fastener is tightened onto it. Washers bond the underside of the screw head to the surface to prevent loosening and fill gaps and spaces that other washers fail to seal. Temperature range is –65° to +300° F. Color is blue.

Screw Size	ID	OD	Thick.	Pkg. Qty.		Per Pkg.
#10 SAE	0.219″	0.500″	0.032″	100	92937A330	$13.33
¼″ SAE	0.281″	0.625″	0.032″	100	92937A350	13.33
⅜″ SAE	0.406″	0.812″	0.032″	100	92937A370	13.33

Loctite® Pro Lock Tight® Threadlocker

Don't let your threadlocker run away—the gel consistency of this threadlocker means it'll stay where you want it. It's ideal for vertical and overhead surfaces and keeps metal fasteners secure despite shock and vibration. It's medium strength and can be removed with hand tools. Begins to harden in 30 minutes; reaches full strength in the absence of air in 24 hours. Temperature range is –65° to +300° F. Color is blue. This product is compliant under all state VOC rules in effect on September 1, 2010.

Loctite No.	Size		Each
51604	1.7-oz. (50 ml) Tube	1810A3	$24.46

Permatex Gel Twist Threadlockers

A simple twist dispenses these gels right where you want them without dripping and with pinpoint accuracy. Begin to harden in 15 min.; reach full strength in 24 hrs. Temperature range is –65° to +300° F. Come in a 0.35-oz. (10 g) stick. These products are compliant under all state VOC rules in effect on October 1, 2008.

24010 can be removed with hand tools.

27010 needs heat and hand tools for removal.

Permatex No.	Strength	For Fasteners	Color		Each
24010	Medium	¼″ to 1″ Dia.	Blue	7445A12	$13.87
27010	High	⅜″ to 1″ Dia.	Red	7445A13	13.87

Mil. Spec. Threadlockers, Retaining Compound, and Primer

A few good threadlockers is all it takes to meet your Mil. Spec. needs on metal parts. Reach full strength in the absence of air in 24 hours. Meet ASTM 5363. These products are compliant under all state VOC rules in effect on October 1, 2008.

To Order: For threadlockers and retaining compound, please specify type and/or grade.

MIL-S-46163 Threadlocker— Comes in Type I Grades J (Blue) and K and L (Red); Type II Grades M (Purple), N (Blue), and O (Red); or Type III Grade R (Green).

MIL-S-22473 Threadlocker— Comes in Grades A, AV, and AVV (Red); AA (Green); B (Yellow); C, CV, and CVV (Blue); D (Orange); E and EV (Purple); H, HV, and HVV (Brown); or JV (Yellow).

Retaining Compound— Meets MIL-R-46082 and comes in Type I, Type II, or Type III Grades. Color is green.

Primer— Cleans the surface and speeds strengthening time. Meets MIL-S-22473.

Mil Spec. No.	10-ml (0.34 oz.) Bottle	Each	50-ml (1.69 oz.) Bottle	Each
Threadlockers

MIL-S-22473 (4¼-oz. aerosol)	74835A84	Each	$17.22	

Vibra-Tite Reusable Threadlocker

Make your fasteners self-locking and self-sealing, yet still be able to adjust, remove, or even reuse them. Use on nylon, wood, and ferrous and nonferrous screws of all sizes. Resists water and can be applied on uncleaned parts—simply wipe off visible oil. You can even coat your fasteners ahead of time and store them indefinitely. Allow to dry 10-30 minutes before assembly. Temp. range is –65° to +165° F. Color is orange. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-oz. Brush-Top Bottle	75145A69	Each	$21.70

Applicators for Threadlockers and Retaining Compounds

Control the amount of adhesive dispensed and eliminate waste. Applicators mount to bottles of threadlocker or retaining compound and dispense 0.01-0.04 ml of material with viscosities up to 30,000 cp (for information on viscosity, see page 3410).

For Bottle Size		Each
50 ml (50 cc)	66025A21	$106.76
250 ml (250 cc)	66025A11	106.78

3M Rite-Lok Threadlockers

Begin to harden in 20 minutes; reach full strength in 24 hours. Temperature range is –65° to +300° F. These products are compliant under all state VOC rules in effect on October 1, 2008.

TL22 is for small-diameter, fine-threaded screws. Remove with hand tools. ***TL42*** is for machine tool bolts and studs and countersunk screws. Remove with hand tools. ***TL62*** creates strong bonds even on oily parts. Requires heat and hand tools for removal. ***TL71*** creates permanent bonds on bolts and studs. Seals against leakage and corrosion.

3M No.	For Bolt Size	Fills Spaces	Color	0.34-oz. (10 ml) Bottle	Each	1.69-oz. (50 ml) Bottle	Each

TL71	Up to 1″	0.007″	Red	92934A440	10.62	—	—

For information about adhesives, see page 3400.

Loctite® Threadlockers and Retaining Compounds

Make your fasteners more secure. These adhesives prevent corrosion, seal against fluid leakage, and resist most chemicals. Reach full strength in 24 hours with the absence of air. Come in bottles (unless noted). These products are compliant under all state VOC rules in effect on October 1, 2008.

Note: Primers are recommended when working with aluminum, black-oxide finishes, cadmium, stainless steel, titanium, and zinc. See Loctite® 7649™ Primer N™ on page 3413.

Also Available: Additional Loctite® threadlockers and retaining compounds. Please ask for 91458A9 and specify the Loctite® number.

Threadlockers

Prevent threaded metal fasteners from loosening due to shock and vibration and protect them from most solvents and harsh environments. *Low* and *medium strength* can be removed with a hand tool. *High strength* require heat and a hand tool.

220™—For ¼″ dia. and smaller fasteners.

222™—For ¼″ dia. and smaller fasteners.

222MS™—For ¼″ dia. and smaller fasteners. NSF-P1 certified for food-processing areas.

242®—For ¼″ to ¾″ dia. fasteners. *8.45 oz. (250 ml)* size is NSF 61 certified for use with drinking water systems.

243™—For fasteners ¼″ to ¾″ dia. Resists oil. *8.45 oz. (250 ml)* size is NSF 61 certified for use with drinking water systems.

246™—For fasteners ¼″ to ¾″ dia.

262™—For fasteners up to ¾″ dia. subject to high vibration and shock. Resists oils. Great for Grade 5 and 8 fasteners.

263™—For permanent locking of fasteners up to ¾″ dia. Prevents loosening and leakage due to vibration and shock.

266™—For fasteners up to ¾″ dia. Resists oils and contaminants.

271™—For up to 1″ dia. fasteners. Ideal for harsh applications and tamperproofing. UL listed.

272™—For bolts up to 1½″ dia.

277™—For use with fasteners up to 1½″ dia.

290™—For locking assembled fasteners up to ½″ dia. *8.45 oz. (250 ml)* size is NSF 61 certified for use with drinking water systems.

294™—Strong bonds even on oily fasteners.

425™—Super glue (cyanoacrylate) for metal and plastic fasteners.

2432™—Has low sulfur content for sensitive metals such as titanium.

2760™—Strong bonds even on oily unprimed fasteners. Use for heavy duty applications, such as construction and railroad equipment.

Retaining Compounds

For nonthreaded metal cylindrical parts such as shafts, hubs, bearings, bushings, splines, pulleys, and press-fit assemblies.

603™—For close-fitting parts. Fills spaces up to 0.005″.

609™—Fills spaces up to 0.005″.

620™—For high-temperature applications. Fills spaces up to 0.015″.

635™—High strength for slip fits. Fills spaces up to 0.010″.

638™—High strength for loose-fitting parts. Fills spaces up to 0.015″.

640™—For high-temperature applications. Fills spaces up to 0.007″.

641™—Med. strength for easy disassembly. Fills spaces up to 0.008″.

648™—High strength for stainless steel and close-fitting parts. Fills spaces up to 0.006″.

680™—High strength for loose-fitting parts. Fills spaces up to 0.015″. *8.45 oz. (250 ml)* size is NSF 61 certified for use with drinking water systems.

● Come in capsules. ★ Meets MIL-S-46163A. ♦ 0.7-oz. (20 g) bottle.

Loctite® Threadlocker and Retaining Compound Sticks

These no-drip sticks prevent corrosion, seal against fluid leakage, and resist most chemicals. Reach full strength in 24 hours. These products are compliant under all state VOC rules in effect on October 1, 2008.

Threadlockers prevent metal fasteners from loosening due to shock and vibration. They resist solvents and harsh environments. *248™* is for ¼″ to ¾″ dia. fasteners. Removes with a hand tool. *268™* is for heavy duty applications on fasteners up to ¾″ dia. Requires heat and a hand tool for removal.

Retaining compound is for nonthreaded metal cylindrical parts such as shafts, hubs, bearings, and bushings.

Extreme-Temperature Pipe Sealants and Threadlockers

Make strong, secure bonds even in extreme temperatures. These no-drip liquid adhesives withstand temperatures from –300° to +2100° F and resist oil, fuel, acids, and alkalies. They form an electrically resistant bond on metal and ceramic threads. Seals can be broken using hand tools. Begin to harden in 24 hours; reach full strength in 2-3 days. Come in 4-oz. bottles. These products are compliant under all state VOC rules in effect on October 1, 2008.

Green penetrates fine openings, such as for set, adjustment, and instrumentation screws. Fills spaces up to 0.003″.

Blue prevents loosening from vibration for medium-sized fasteners, pipe threads, and bearings. Fills spaces up to 0.005″.

Red provides high-strength bonds for studs and large fasteners, bolts, and pipe threads. Fills spaces up to 0.01″.

Green	7604A54	Each	$31.18
Blue	7604A55	Each	$31.18
Red	7604A56	Each	$31.18

For information about adhesives, see page 3400.

Pipe Thread Sealant Tape

Ideal for oxygen systems, this top-quality, made-in-the-U.S. tape maintains a seal on threaded connections and withstands harsh temperatures. Temperature range is –450° to +550°F. All stretch 50% without breaking. These products are compliant under all state VOC rules in effect on October 1, 2008.

Commercial, standard military, and premium military grades are made with 100% virgin PTFE for strong chemical resistance; colored premium military grade and military grade for stainless steel are made with 99% virgin PTFE.

Commercial Grade— Also known as dope tape. Specific gravity is 0.5 g/cc. Thickness is 0.0028″. Color is white. UL listed and USDA and FDA compliant.

Standard Military Grade— Greater density and thicker than commercial grade. Specific gravity is 0.9 g/cc. Thickness is 0.0032″. Color is white. Meets MIL-T-27730A. UL listed. USDA and FDA compliant.

Premium Military Grade— Greater density than standard military grade and even seals coarse threads. Specific gravity is 1.2 g/cc. Thickness is 0.0032″. Color is white. Meets MIL-T-27730A and MIL-A-A-58092. UL listed. USDA and FDA compliant.

Colored Premium Military Grade— Color-code hot water, gas, and chemical connections. Specific gravity is 1.35 g/cc. Thickness is 0.0032″. Meets MIL-T-27730A and MIL-A-A-58092. UL listed. **To Order:** Please specify color: light green, light orange, light red, or light yellow.

Military Grade for Stainless Steel— Use on stainless steel and coarse threads. Specific gravity is 1.2 g/cc. Thickness is 0.0032″. Color is gray. Meets MIL-A-A-58092.

Pipe Thread Sealants

These products are compliant under all state VOC rules in effect on October 1, 2008.

Standard— General purpose sealant for metal threads.

Slic-Tite® PTFE— Premium sealant for metal as well as ABS, PVC, and CPVC pipe threads (unless noted).

Loctite® and Loctite® PTFE— Ideal for high-vibration areas. Use on metal threads; not for use with thermoplastic or oxygen systems. *Loctite® PTFE* are PTFE combined with adhesive.

Nos. 542™, *545*™, and *569*™ are for use on air-powered and hydraulic fittings. *No. 554*™ is for refrigerant thread sealing. *No. 580*™ is a low-sulfur, low-halogen formula good for power plants. *16-oz. brush-top can (*8149K15*)* is for threaded plastic pipe, pipe fittings, and flanges. Good in irrigation, pump, and well applications.

No. 561™ enables easy disassembly and is certified to CSA International requirement No. 4-90 for natural and LP gases (vapor state) up to 300 psig. *No. 565*™ is the liquid formulation of 561. *No. 567*™ has excellent solvent resistance. *No. 577*™ is for coarse threads. *No. 592*™ allows you to reposition parts for up to one hour after application. *16-oz. brush-top can (*8149K22*)* is for metal pipe.

Loctite® Pipe Joint Compound— Use this chemical resistant sealant for general purposes.

▲ Also for plastic threads. ♠ NSF 61 certified for use with drinking water systems.

For information about adhesives, see page 3400.

PTFE Oxygen-Safe Joint Sealants

Safely make tight seals between pipe threads and joints where oxygen is present. These PTFE pastes are nontoxic and odorless. Pipes can be used right after application. These products are compliant under all state VOC rules in effect on October 1, 2008.

For Dry Environments— Seals threaded joints on any pipe material. Ideal for diesel fuel, liquid propane gas, oxygen below 257° F, and hydraulic systems. Temperature range is –400° to +500° F (–40° to +300° F for natural gas; up to 140° F for liquid oxygen). Maximum pressure is 3,500 psi (300 psi for natural gas). Maximum pipe size for natural gas is ¾″ NPT. USDA approved for food-processing applications.

For Wet Environments— Use for gas, liquid, and low-vacuum service, as well as for oxygen and liquid-oxygen systems. For most pipe materials; not for use with aluminum-to-aluminum surfaces or in alkali, fluorine, or hydrofluoric environments. Withstands temperatures up to 450° F (140° F for liquid oxygen). Maximum pressure is 10,000 psi.

	Size	Color		Each
For Dry Environments	3.5-oz. Tube	White	4538K1	$17.40
For Wet Environments	3.5-oz. Jar	Green	4538K6	79.82

Joint Sealants

These products are compliant under all state VOC rules in effect on October 1, 2008.

X-Pando— Nontoxic, odorless compounds expand as they harden, forcing their way into every fiber, pore, and crack. Color is dark gray. UL listed. NSF 61 certified for use with drinking water systems.

Regular is for all pipes (discolors unanodized aluminum) and is liquid-oxygen compatible. Temperature range is –300° to +1000° F. FDA and USDA compliant.

Special is for sealing cement-lined pipe joints prior to welding. The heat from the welding torch helps the sealant begin to harden. Not rated for temperature.

Key-Tite Joint Compound— A waterproof, nonhardening sealant for air, gas, water, and steam joints. Not for use with gasoline. Temperature range is –50° to +450° F. Color is green.

Key Graphite Paste— Nonhardening for use with petroleum products, acids, and high-pressure steam joints. Not for water service. Temperature range is –30° to +750° F. Color is black.

Extreme-Temperature Sealant

Seal threads, flanges, and other fittings at extreme temperatures. This sealant resists heat, steam, ammonia, hydrocarbons, refrigerants, hydraulic fluids, propane, brine, acids, and mild alkalies. Also withstands severe vibration and stress. Use on metal, ceramic, rubber, and most plastics except PTFE, polypropylene, and polyethylene. Can be used on steam joints up to 2,000 psi; flanges without gaskets up to 6,500 psi; and threaded joints up to 10,000 psi.

External heat (from a heat gun, infrared heat, oven, etc.) must be applied to reach full strength quickly. Above 300° F, the sealant begins to harden in 15 minutes and reaches full strength in 4 hours. Below 300° F, it begins to harden in 4 hours and will take up to 1 year to reach full strength if not heated. Temperature range is –315° to +1500° F. Color is black.

Meets MIL-S-15204D Navy test requirements for use on marine turbines at 1,200 psi and 950° F. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-qt. Can ..... **1959A31** **Each** $178.33

Extreme-Temperature Gasket Maker

Withstanding temperatures from –300° to +2350° F, this mica-based paste forms tight joints and gaskets for flanges, valves, cylinder heads, furnace doors, exhaust systems, and stoves. Use on iron, lead, stainless steel, steel, and ceramic. It's fireproof and resists most acids, solvents, and corrosives. Color is gray. This product is compliant under all state VOC rules in effect on October 1, 2008.

Cartridge fits a standard caulk gun; see page 3428 for guns.

Size	Begins to Harden	Reaches Full Strength		Each
11-oz. Cartridge	30 min.	24-48 hrs.	7549A11	$25.69
3½-lb. Can	30 min.	24-48 hrs.	7549A12	85.94
7-lb. Can	30 min.	24-48 hrs.	7549A14	121.25

Loctite® Threadlocker Tape

Tape threads to keep nuts and bolts from vibrating loose. Also seals against corrosion and leaks. Use on ¼″ or larger nuts and bolts. It reaches full strength in 24 hours and can be applied up to 30 days before assembly. Tape is ½″ Wd. ×0.003″ Thick. Temperature range is –65° to +300° F. This product is compliant under all state VOC rules in effect on September 1, 2011.

Loctite No.	Color		21-ft. roll
249	Blue	2399A1	$17.65

High-Temperature/Pressure Pipe Thread Sealant

Use in high-temperature and high-pressure applications for close-fitting threaded joints on 2″ diameter and smaller steel and stainless steel pipe. Sealant is made of graphite with a petroleum-based carrier. It's heat resistant and can also be used as a bolt lubricant. Not for use on oxygen lines. Maximum temperature is 1175° F. Maximum pressure is 7,500 psi (air). Meets General Electric D50YP12 (Rev. 2) specifications. Color is dark gray. This product is compliant under all state VOC rules in effect on October 1, 2008.

4-oz. (125 g) Tube ..... **1965K1** **Each** $44.92

Loctite® Gasket Eliminator Sealants

Replace gaskets with tough, resilient seals. Perfect for fuel and water pumps, thermostats, split crankcases, gear boxes, transmission housings, axle covers, and most metal surfaces. Reach full strength in the absence of air. Temp. range is –65° to +300° F (unless noted). These products are compliant under all state VOC rules in effect on October 1, 2008.

Cartridges fit a standard caulk gun; see page 3428 for guns.

504™— Creates rigid seals; fills spaces up to 0.03″. Begins to harden in 4 hours; reaches full strength in 24 hours. Comes in a gel.

510™— Provides rigid seals; fills spaces up to 0.01″. Begins to harden in 4 hours; reaches full strength in 24 hours. Comes in a gel. UL listed.

515™— Makes flexible gaskets and fills spaces up to 0.01″. Begins to harden in 1 hour; reaches full strength in 12 hours. Comes in a gel. UL listed.

518™— For difficult-to-seal aluminum flanges. Fills spaces up to 0.01″. Begins to harden in 4 hours; reaches full strength in 24 hours. Comes in a gel. NSF 61 certified for use with drinking water systems.

573™— Seals close-fitting joints between metal faces and flanges. Use to make form-in-place gaskets. Fills spaces up to 0.01″. Begins to harden in 6 hours; reaches full strength in 48 hours. Comes in a paste.

574™— Fast-strengthening version of 573. Begins to harden in 1 hour; reaches full strength in 12 hours. Comes in a paste.

518™ Master Gasket Kit— Includes a 0.85-oz. (25 ml) syringe of No. 518™ and a 0.88-oz. aerosol can of primer.

♠ Temperature range is –65° to +400° F.

Loctite® Gasketing Sticks

Easy, no-mess sticks make sealing gaskets a snap. Withstand temperatures up to 300° F. These products are compliant under all state VOC rules in effect on October 1, 2008.

534™ holds gaskets in place for assembly and is repositionable at full strength. Begins to harden in 10 minutes; reaches full strength in 24 hours.

548™ is an oil-resistant gasket/flange sealant; fills gaps up to 0.010″. Begins to harden in 10 minutes; reaches full strength in 24 hours.

Loctite No.	Size	Color		Each
534	19 g (0.67 oz.)	Purple	8091A37	$10.79
548	18 g (0.63 oz.)	Orange	8091A24	20.11

For information about adhesives, see page 3400.

Loctite® RTV Silicone Gasket Makers and Sealants

Begin to harden in 30 minutes (unless noted); reach full strength in 24 hours. Cartridges fit a standard caulk gun; see page 3428 for guns. These products are compliant under all state VOC rules in effect on October 1, 2008.

Note: Not for use on parts that come in contact with gasoline.

High-Performance RTV Silicone Gasket Makers— Form flexible, low-odor gaskets that replace traditional cork, paper, and rubber gaskets. Resist oil. Fill spaces up to 0.25″. Temperature range is –60° to +400° F. *40462, 58730,* and *58775* are UL listed and NSF P1 certified.

Superflex® RTV Silicone Sealants— General purpose silicone forms a tough rubbery seal. Thick for use on vertical surfaces. Fill spaces up to 0.25″. Temperature range is –60° to +400° F. UL listed.

Superflex® Blue RTV Silicone Sealants— Similar to Superflex RTV Sealant but oil and fluid resistant. Fill spaces up to 0.25″. Temperature range is –65° to +400° F.

Superflex® High-Temperature RTV Silicone Sealants— Resist aging and weather without shrinkage, cracking, or hardening. Fill spaces up to 0.25″. Begin to harden in 1 hour. Temperature range is –60° to +400° F.

Gasket Sealant #1— Creates rigid seals on threaded connections, air ducts, and plumbing connections. Fills spaces up to 0.25″. Begins to harden immediately. Temperature range is –65° to +400° F.

Gasket Sealant #2— Create flexible seals that never fully harden. Fill spaces up to 0.25″. Temperature range is –65° to +400° F.

Aviation Gasket Sealant— Creates flexible seals on aviation and marine engines and threaded connections. Begins to harden in 4 hours. Temperature range is –65° to +400° F.

Copper Gasket Maker— Adheres to most materials and withstands high temperatures. Fill spaces up to 0.240″. Begins to harden in 60 minutes. Temperature range is –65° to +600° F.

Instant Gasket— Get quick, low-odor seals. Fill spaces up to 0.25″. Temperature range is –65° to +400° F.

Also Available: Additional Loctite® gasket makers and sealants. Please ask for 7479A51 and specify the Loctite® number.

Permatex Silicone Gasket Makers

These products are compliant under all state VOC rules in effect on October 1, 2008.

RTV Silicone Gasket Makers— Replace traditional cork, paper, and rubber gaskets and get high-temperature resistance and leakage control with these pastes. Plus, they create seals that retain torque. Apply directly to metal, plastic, glass, rubber, and wood to form a gasket right in place. Resist most chemicals, solvents, and oils. Fill spaces up to 0.25″. Cartridges fit a standard caulk gun; see page 3428 for guns.

Blue is a general purpose paste that forms tough yet flexible gaskets. Begins to harden in one hour; reaches full strength in 24 hours. Temperature range is –65° to +400° F. Color is blue.

Ultra-Blue offer excellent adhesion to oily surfaces; contact with oil actually increases flexibility and seal. They're noncorrosive and nonflammable. Begin to harden in two hours; reach full strength in 24 hours. Temperature range is –65° to +400° F. Color is blue.

Hi-Temp Red resist cracking and shrinking from temperature fluctuations. Begin to harden in one hour; reach full strength in 24 hours. Temperature range is –65° to +600° F. Color is red. Meets MIL-A-46106B.

Ultra-Copper Hi-Temp offers excellent oil and temperature resistance and forms highly flexible gaskets. Temperature range is –65° to +600° F. Color is copper.

Right Stuff Aerosol Instant Seal Gasket Maker— In place of rubber, cork, paper, and felt gaskets, these gasket makers create seals that protect against leaks caused by vibration, thermal expansion, and irregular surfaces. Excellent resistance to oils and coolants. Fill spaces up to 0.25″. Begin to harden in 5 minutes; reach full strength in 24 hours. Temperature range is –75° to +450° F. Color is black.

3M Scotch-Weld Rubber and Gasket Adhesives

Reach full strength in 24 hours. These products are compliant under all state VOC rules in effect on January 1, 2012, except in California, Connecticut, Delaware, Maine, Maryland, New Jersey, New York, Pennsylvania, Rhode Island, and Northern Virginia (unless noted).

847/847L bond leather, nitrile rubber, and gasketing materials to many surfaces. Temp. range is –40° to +150° F. Color is brown. *847* is a medium-thick brush-on adhesive. Begins to harden in 15 minutes. *847L* is a spray adhesive; not for use on EPDM rubber. Begins to harden in 20 minutes.

1300/1300L are strong, heat-resistant adhesives. Bond metal, butyl rubber, neoprene, SBR, and wood. Not for use on EPDM rubber. Temperature range is –30° to +300° F. Color is yellow. *1300* is a medium-thickness brush-on adhesive. Begins to harden in 12 minutes. *1300L* is a sprayable adhesive, begins to harden in 8 minutes, and meets MMM-A-121.

2141 is a water-resistant brush-on adhesive that bonds neoprene, nitrile, and SBR to themselves and other substrates. Begins to harden in 15 minutes. Temperature range is –40° to +180° F. Color is yellow.

Also Available: Additional 3M Scotch-Weld rubber and gasket adhesives. Please ask for 7509A91 and specify the 3M number and size.

★ This product is compliant under all state VOC rules in effect on January 1, 2011.

Loctite® 5900® Silicone Flange Sealant

Create noncorrosive, low-odor flange seals with good resistance to oil. Begins to harden in 20 minutes; reaches full strength in 24 hours. Temperature range is –60° to +400° F. Color is black. This product is compliant under all state VOC rules in effect on October 1, 2008.

Fits a standard caulk gun; see page 3428 for guns.

10.15-oz. Cartridge	**6708A22**	**Each**	$43.83

For information about adhesives, see page 3400.

Dow Corning Silicone Adhesives/Sealants

Form a tough, rubbery solid in 24 hours at room temperature (unless otherwise stated). Not for concrete, mortar, or under water (unless otherwise stated). These products are compliant under all state VOC rules in effect on October 1, 2008.

Cartridges fit a standard caulk gun; see page 3428 for guns.

732 Multipurpose— For sealing, bonding, and gasketing. Bonds metal, plastic, ceramic, glass, natural and synthetic fiber, silicone resin, vulcanized silicone rubber, and wood. Can be used on overhead and vertical surfaces. Begins to harden in 20 minutes. Temperature range is –76° to +356°F for aluminum, clear, and white; –76° to +400°F for black. All meet MIL-A-46106B. FDA and USDA compliant. NSF 51 certified and NSF 61 certified for use with food equipment and drinking water systems. UL recognized.

795 Building Sealant— For high-performance weatherproofing and glazing of windows. Bonds to aluminum, steel, painted metal, brick, concrete, glass, granite, masonry, and stone. Begins to harden in 3 hours; reaches full strength in 7-14 days. Temperature range is –40° to +300°F. Meets Fed. Spec. TT-S-001543A, Class A; ASTM C920 Type S, Grade NS, Class 50; CAN 2-19.13-M82.

832 Multisurface— Bonds to most surfaces with superior adhesion to metal, plastic, concrete, glass, masonry, and rubber. Begins to harden in 50-90 minutes. Temperature range is –67° to +300°F. UL 94HB listed.

9-1363 Assembly— Begins to harden in 10 minutes for quick handling of parts. Won't corrode copper and other sensitive metals. Plus, it does not have the harsh vinegar smell of other silicones. Forms a flexible seal upon reaching full strength. Temperature range is –40° to +300°F. UL 94HB listed.

Silicone Adhesives/Sealants

These silicones (formerly GE silicones) form a tough, rubbery solid in 24 hours at room temperature. Not for underwater, concrete, or mortar applications. These products are compliant under all state VOC rules in effect on October 1, 2008.

Cartridges fit a standard caulk gun; see page 3428 for guns.

(102, 103, 108, and ***109) Multipurpose—*** For sealing, bonding, and gasketing. Thick for use on vertical and overhead surfaces. Bond metal, plastic, ceramic, glass, silicone resin, vulcanized silicone rubber, and wood. Begin to harden in 20 minutes. Temperature range is –75° to +400°F. Meet MIL-A-46106B, Group I, Type I. FDA compliant and USDA approved. NSF 51 certified for use with food equipment. UL recognized.

(106) High Temperature— Use for sealing heating elements, for aerospace gasketing, as insulation, and as a protective coating. Also for oven conveyor belts, industrial ovens, and bag filters on smoke stacks. Temperature range is –75° to +500°F. FDA compliant and USDA approved. NSF 51 certified for use with food equipment. UL recognized. Begins to harden in 20 minutes and meets MIL-A-46106B, Group III, Type I.

(118) Flowable— Self-leveling for filling cracks and crevices. Use for making gaskets and coating mechanical devices. Bonds metal, plastic, ceramic, and glass. Begins to harden in 20 minutes. Temperature range is –75° to +400°F. FDA compliant. USDA approved. NSF 51 certified for use with food equipment. UL recognized.

(157 and ***159) High Strength—*** High tensile strength for sealing, bonding, and gasketing and thick for use on vertical and overhead surfaces. Begin to harden in 45 minutes. Temperature range is –75° to +400°F for 157; –75° to +500°F for 159.

(6708) Multipurpose Low Odor— Doesn't have the harsh vinegar smell of other silicones. Bonds aluminum, steel, plastic, and glass. Resists moisture and weather. Noncorrosive to most metals (may discolor copper and brass). Begins to harden in 25 minutes. Temperature range is –75° to +400°F.

Silicone Adhesives/Sealants in Easy-Dispensing Cans

Sealing, bonding, and waterproofing made easy—just press the nozzle to dispense a uniform bead of silicone. Begin to harden in 1 hour; reach full strength in 24 hours. Come in a 7.25-oz. can. Meet MIL-A-46106B, Group I, Type I. FDA compliant. These products are compliant under all state VOC rules in effect on October 1, 2008.

General Purpose— For sealing windows and other general applications. Temperature range is –60° to +450°F. Color is clear.
75075A676 ..... **Each** $23.02

High Moisture— For high-moisture indoor and outdoor applications. Temperature range is –60° to +450°F. Color is white.
75075A677 ..... **Each** $23.27

For information about adhesives, see page 3400.

Silicone Adhesives/Sealants for Electronics

Perfect for electronic and electrical applications, these silicones form a tough, rubbery solid in 24 hours at room temperature (unless otherwise stated). These products are compliant under all state VOC rules in effect on October 1, 2008. Cartridges fit a standard caulk gun; see page 3428 for guns.

Standard Silicones— *Formerly GE silicones.*

11 Two-Part Encasing— Pourable silicone rubber for encasing (potting) electronic components to dampen shock and vibration. Includes a combined 1 lb. of base compound and curing agent. Begins to harden in 1½ hrs. Meets GSA A-A-56023A. FDA compliant.

60 Two-Part High Temperature— Similar to 11 except it withstands higher temperatures and begins to harden in 2 hours. Does not meet GSA A-A-56023A and is not FDA compliant.

162 Noncorrosive— Noncorrosive to copper and brass. Bonds capacitors, resistors, and integrated circuits to printed circuit boards. Also insulates exposed copper wires and terminals. Begins to harden in 4 hours; reaches full strength in 48 hours. Meets MIL-A-46146B. UL recognized.

Dow Corning Silicones

182 Sylgard Encasing— Two-part pourable silicone for encasing items in adhesive (potting). Provides long-term protection in demanding electronic applications by acting as a dielectric insulator, a barrier against environmental contamination, and a stress-relieving shock and vibration absorber. Includes a combined 17.6 oz. of base compound and curing agent; mix ratio is 10:1. Begins to harden in 8 hours. UL 94V1 listed.

734 Flowable— Free flowing and self-leveling for filling cracks and crevices. Good for electrical insulation. Use on metal, plastic, ceramic, and glass. Begins to harden in 13 minutes. FDA compliant. NSF 51 certified for use with food equipment. UL listed.

736 Heat Resistant— Use to seal and encase heating elements in adhesive (potting), as a protective coating, and for aerospace gasketing and electrical insulating. Begins to harden in 17 minutes. Complies with USDA and FDA CFR21 177.2600 covering indirect food contact. NSF 51 certified for use with food equipment. Meets MIL-A-46016, Group I, Type I. UL listed.

748 Noncorrosive Nonflowable Low Odor— Use with corrosion-sensitive electrical and electronic equipment. Plus, it doesn't have the harsh vinegar smell of other silicones. Bonds metal, plastic, glass, and rigid PVC. Resists moisture and weather. Begins to harden in 30 minutes. Complies with FDA CFR21 177.2600 covering indirect food contact. UL 94HB listed.

3165 Noncorrosive Fast Tack— This paste-like silicone begins to harden in 4 minutes. Use for sealing wires, electrical leads, and yokes. UL 94V0 listed.

Dow Corning Hot-Melt Silicone Sealant

Get an ultra clear, long-lasting seal with this hot-melt silicone adhesive. Once applied to a surface, you have 15 minutes before parts must be joined; begins to harden immediately upon joining. Reaches full strength in 48 hours.

Temperature range is –25° to +200° F. Comes in a 50-g (1.8 oz.) cartridge; fits applicator gun (sold separately). Sealant is FDA CFR21 177.2600 compliant. This product is compliant under all state VOC rules in effect on October 1, 2008.

Applicator gun holds a 50-g cartridge, heats in 10-12 minutes, and provides 20 minutes of cord-free use when heated. Operates on 120 volts. Includes a 6½-ft. cord with two-prong plug.

Dow Corning No.	Color			Each
HM-2500	Clear	8148A22		$27.14
Applicator Gun		7354A66	Each	$136.30

Underwater Silicone Sealant

Create waterproof bonds on metal, plastic, glass, and rubber. Sealant forms a tough, rubbery solid that stays flexible and won't crack or shrink. It can be used on aquariums—once hardened, it will not harm fresh- or saltwater fish.

Begins to harden in 10-20 minutes and reaches full strength in 48 hours. Temperature range is –40° to +400° F. Color is clear.

Sealant is FDA CFR21 177.2600 compliant when it reaches full strength and is washed. Meets ASTM C920, Class 25. This product is compliant under all state VOC rules in effect on October 1, 2008.

2.8-oz. Tube ..... 7327A21 Each $7.58

Pliobond Universal Cements

Make flexible, waterproof, chemically resistant bonds that strengthen with age. Begin to harden in 3-5 min. Color is tan. Cover approximately 130-330 sq. ft./gal.

20 and 25— For metal, plastic, ceramic, glass, and rubber. Temperature range is –40° to +375° F. These products are compliant under all state VOC rules in effect on January 1, 2011, unless noted.

35— For porous surfaces like cork and fabric. Temperature range is –40° to +375° F. These products are compliant under all state VOC rules in effect on January 1, 2011, unless noted.

HT-30— For high-temperature applications to create a bond on porous and nonporous surfaces. Heat to 300° F to reach full strength. Temperature range is –40° to +500° F. These products are compliant under all state VOC rules in effect on January 1, 2012, except in California, Connecticut, the D.C. area, Delaware, Maine, Maryland, New Jersey, New York, Pennsylvania, Rhode Island, and Northern Virginia.

Liquid Nails Construction Adhesives

Cartridge

Tube

Can

Liquid nails provide a quick initial bond and are waterproof, unless otherwise stated. These products are compliant under all state VOC rules in effect on October 1, 2008.

10-oz. cartridges fit standard caulk guns; 28-oz. cartridges fit large-size caulk guns. See page 3428 for guns.

Latex-Base Interior Grade— Cleans up with water. Bonds already finished panels, concrete, drywall, foam board, hardboard, plywood, and wood. Adhesive is water resistant. Begins to harden in 30 minutes. Because it is water based, the time it takes to reach full strength varies depending on substrate, humidity, moisture, etc. Application temperature range is +40° to +100° F; operating temperature range is +40° to +120° F.

Vertical Hold Interior/Exterior Grade— Adheres items vertically to wood, concrete, plaster, and metal. Ideal for mirrors (will not desilver backing). Begins to harden in 60 minutes. Application temperature range is +40° to +100° F; operating temperature range is –40° to +300° F.

Interior/Exterior Deck and Subfloor Grade— Weatherproof and bond lumber, treated lumber, plywood, particleboard, and other building materials. Begins to harden in 15-20 minutes. Fills gaps up to ⅜″. Application temperature range is +40° to +100° F; operating temperature range is –20° to +140° F. Meet American Plywood Association AFG-01, ASTM D3498, and ASTM C557.

Heavy Duty Interior/Exterior Grade— Water resistant, this multipurpose high-strength adhesive bonds the heaviest materials with exceptional hold. For fiberboard, drywall, polystyrene foam, particleboard, plywood, and wood trim. Begin to harden in 20 minutes. Application temperature range is +40° to +100° F; operating temperature range is 0° to +140° F (unless noted).

★ Application temperature range is –35° to +140° F; operating temperature range is –80° to +350° F. Color is clear.

Weldwood Contact Cements

All reach full strength in 72 hours. Application temperature range is +65° to +110° F; operating temperature range is –40° to +180° F. These products are compliant under all state VOC rules in effect on October 1, 2008.

Original— Hardens to form a strong water-, weather-, and chemical-resistant bond in 15 minutes to 2 hours. Bonds metal, plastic, leather, paper, rubber, and wood. Meets MMM-A-130B.

Nonflammable— Neoprene rubber formulation for superior adhesion and low odor. Bonds paper and wood. Hardens to form a water-resistant bond in 30-40 min. Works on porous surfaces and is water based.

3M Scotch-Weld Contact Adhesives

Get quick, secure bonds. Application temperature is above 65° F. All reach full strength in 24 hours.

10— Multipurpose for bonding aluminum, steel, plastic laminate, canvas, masonry, rubber, wallboard, and wood veneer. Begins to harden in 5-10 minutes. Operating temperature range is –20° to +160° F. Covers approximately 288 sq. ft./gal. Meets MMM-A-121. This product is compliant under all VOC rules in effect on June 1, 2011, except in California.

1357— High performance for bonding metal, plastic laminate, rubber, and wood. Begins to harden in 10 min. Operating temperature range is –20° to +220° F. Covers approximately 308 sq. ft./gal. Meets MIL-A-21366A and MMM-A-121. This product is compliant under all state VOC rules in effect on June 1, 2011, except in California (unless noted).

30-NF— A favorite in cabinet shops, these adhesives are high-strength and water based with good heat resistance and low odor. They bond canvas, foamed plastic, leather, plastic laminate, wood, and wood veneer. Not recommended for metal. Begin to harden in 30 minutes. Operating temperature range is –20° to +220° F. Cover approximately 680 sq. ft./gal. Meet MIL-A-24179A, Type I. This product is compliant under all state VOC rules in effect on October 1, 2009.

♦ This product is compliant under all state VOC rules in effect on October 1, 2009.

3M Scotch-Weld Plastic Adhesives

Make secure bonds on plastic. Reach full strength in 24 hours (unless otherwise stated). Temperature range is –20° to +160° F. These products are compliant under all state VOC rules in effect on January 1, 2012, except in California, Connecticut, the D.C. area, Delaware, Maine, Maryland, New Jersey, New York, Pennsylvania, Rhode Island, and Northern Virginia (unless noted).

826— Bonds cellulose acetate, PET, and PVC. Excellent resistance to fuels, water, and oil.

1099— Bonds vinyl extrusions and sheeting. Also good for fabric, foam, ABS, PVC, and acrylic. It resists weather, water, and oil. Color is tan. Meets MIL-A-13883B, Type I and MMM-A-189C, Class 2.

2262— Bonds flexible, rigid, and extruded vinyls to metals and other materials without staining.

4475— Bonds ceramic, cloth, glass, leather, and vinyl to themselves, as well as other materials. Adhesive dries to a firm bond and resists water, soap solutions, oil, and grease.

4693— Bonds ABS, glass-filled PET, polypropylene, polyethylene, styrene polymers, and metal. Has good water resistance. Reaches full strength in 7 days.

♦ This product is compliant under all state VOC rules in effect on January 1, 2011.

Contact Cement for Vinyl Fabrics

Excellent for bonding vinyl-coated fabric, this fast-drying adhesive also bonds metal, leather, rigid plastic, urethane, vinyl foam, and wood. Strong yet flexible, it stands up to weather, oil, fuel, grease, and chemicals. Begins to harden in 2-5 minutes; reaches full strength in 24-48 hours. Covers approximately 100 sq. ft./gal.

These products are compliant under all state VOC rules in effect on October 1, 2009 (unless noted).

Copper Pipe Adhesives

Don't bother soldering—these adhesives form leakproof joints on copper and brass and resist water and heat. Ideal for air conditioning and refrigeration work and drinking water service. Reach full strength in 24 hours. Color is copper. NSF 61 certified for drinking water systems. These products are compliant under all state VOC rules in effect on October 1, 2008.

Standard is resin and hardener in 1-oz. dual-cartridge syringe; mix ratio is 1:1. Begins to harden in 20 min. Pressure rating is 1,139 psi for ½″ pipe. UL listed for sprinkler systems. ***No mix*** is a one-part adhesive in a bottle. Begins to harden in 7 min. Pressure rating is 500 psi for 2½″ pipe.

	Size	Temperature Range		Each
Standard	1-oz.	+36° to +180° F	74675A11	$10.29
No Mix	0.35-oz.	–40° to +230° F	6913A11	19.49
No Mix	1.76-oz.	–40° to +230° F	6913A12	31.68

Superbond Polyurethane Glues

Extra-strong adhesion in an easy-to-use squeeze bottle. Bond metal, plastic, ceramic, glass, stone, and wood. Glues are waterproof, paintable, stainable, and sandable at full strength. For indoor and outdoor use. Begin to harden in 10-20 minutes; reach full strength in 24 hours. These products are compliant under all state VOC rules in effect on October 1, 2008.

Economy's application temperature range is +40° to +90° F; withstands temperatures up to +150° F. ***Gorilla's*** application temperature range is +68° to +130° F; withstands temperatures up to +212° F.

Plastic Resin Wood Glue

Ideal for laminating and edge gluing, this powder adhesive mixes with water to form bonds stronger than the wood itself. Mix ratio is 10:4. Begins to harden in 2 hours; reaches full strength in 10 hours. Application temp. range is 70° to 100° F; operating temp. range is 20° to 140° F. Color is tan. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-lb. Can	7469A1	Each	$9.86
4.5-lb. Can	7469A2	Each	$35.48

Extreme Environment Wood Glue

Also known as resorcinol, this glue provides strong, durable bonds in severe environments. Withstands freshwater, salt water, outdoor exposure, and tropical to subzero temperatures. Bonds textiles, fiber boards, cork, leather, and wood. Includes 16-oz. can of liquid resin and 4-oz. can of powdered catalyst. Mix ratio is 5:1. Begins to harden in 3-4 hours; reaches full strength in 10 hours at 70° F. Color is purple. Meets MMM-A-181D, Grade B, ANSI/AITC A 190.1-1983, and MIL-A-22397, Grade A.

This product is compliant under all state VOC rules in effect on September 1, 2010, except in California.

16-oz. Can	7459A2	Each	$51.67

Floor Covering Adhesive

Bond carpeting, vinyl tile, and vinyl composite tile to subfloors with this water-resistant adhesive. For indoor use. Apply above 65° F; operating temperature range is 40° to 120° F. One gallon covers approximately 45 sq. ft. at ⅛″ thick and 120 sq. ft. at 1/16″ thick. Color is beige. This product is compliant under all state VOC rules in effect on October 1, 2008.

Size	Begins to Harden	Reaches Full Strength		Each
1-qt. Can	15-60 min.	24-36 hrs.	66515A12	$7.09
1-gal. Can	15-60 min.	24-36 hrs.	66515A13	17.82

Plastic-Pipe Cements

Begin to harden immediately; reach full strength in 1-48 hrs. depending on pipe diameter. Temperature range varies with application materials. These products are compliant under all state VOC rules in effect on October 1, 2009, except where noted.

(A) Medium Duty for PVC—Use on drinking water, drain, waste, and vent pipes and fittings up to 6″ dia. Meet ASTM D2564.

(B) Heavy Duty for PVC—Same as medium duty for PVC, except is suitable for use on pipes up to 12″ diameter.

(C) For CPVC—Join CPVC plastic pipe and fittings. Use on hot- and cold-water plumbing and industrial piping. *Yellow* is for use on pipes up to 2″ dia. *Orange* is for use on pipes up to 6″ dia. Meet ASTM F493.

(D) For ABS—Specially designed to handle rigid ABS pipe. Use for drain, waste, and vent pipes and fittings. Meet ASTM D2235.

(E) All Purpose—Use on PVC, ABS, styrene, and CPVC pipes and fittings. Use for solvent welding most plastic pipe, conduit, water lines, and drain, waste, and vent systems. These products are compliant under all state VOC rules in effect on June 1, 2011, except in California.

(F) Primer—Removes gloss and prepares PVC and CPVC pipe for solvent welding. Meets ASTM F656.

(G) Cleaner—Removes dirt, grease, and moisture from all types of pipe and fittings. Specifically recommended for PVC, CPVC, and ABS plastic.

H	1-gal. Can	125-150 sq. ft.	White	62695T82	$47.67
J	1-qt. Can	75 ft.	Cream	62695T86	36.86

For information about adhesives, see page 3400. For caulk guns, see page 3428.

Cove Wall Base Adhesives

Use indoors to bond rubber and vinyl cove wall base to concrete, drywall, painted surfaces, and wood. Begin to harden in 20-25 minutes; reach full strength in 24-48 hours. Apply at 65° to 85° F (unless noted). These products are compliant under all state VOC rules in effect on October 1, 2008. ***10.3-oz. cartridge*** fits a standard caulk gun. ***30-oz. cartridge*** fits a large-size caulk gun.

Size	Operating Temp. Range	Color		Each
10.3-oz. Cartridge	0° to 120° F	Off-White	7539A21■	$4.84
30-oz. Cartridge	40° to 90° F	White	7539A17	6.13
1-gal. Pail	40° to 90° F	White	7539A12	28.95

■ Application temperature range is 65° to 100° F.

Masonry Bonding Adhesive

Get the strength of mortar without the hassle; bond concrete, brick, stone, rock, wood, and many other materials. Meets structural requirements of block construction and landscaping industries. Begins to harden in 15 minutes; reaches full strength in 72 hours. Apply at +40° to +100° F; operating temperature range is -20° to +160° F. Color is brown. Comes in a 10.3-oz. cartridge that fits a standard caulk gun. This product is compliant under all state VOC rules in effect on October 1, 2008.

8149A23 ..... **Each** $9.58

Multipurpose Acrylic Sealant

Bonds to foam, metal, plywood, wallboard, and wood. Unlike most silicone sealants, this sealant can be painted at full strength, dries quickly, and cleans up easily with just water. It's ideal for joint sealing and is thick for vertical and overhead use. Resists water and UV light. Begins to harden in 15-30 minutes; reaches full strength in 12-24 hours. Apply above 40° F. Operating temperature range is 0° to 200° F. Color is gray. Fits a standard caulk gun. Meets USDA requirements for use in meat and poultry processing. This product is compliant under all state VOC rules in effect on October 1, 2008.

10.3-oz. Cartridge ..... 9130T91 **Each** $8.60

Elastomeric Adhesives/Sealants

Similar to polyurethane, these low-odor adhesives/sealants are ideal for sealing joints between materials with different textures and expansion/contraction rates. Bond metal, ceramic, concrete, glass, masonry, and wood. Resist mild chemicals and solvents. Begin to harden in 30 minutes; reach full strength in 24 hours. Application temperature range is +40° to +120° F; operating temperature range is –40° to +195° F. Come in a 10.3-oz. cartridge that fits a standard caulk gun. Meet Fed. Spec. TT-S-00230C, Type 2, Class A. These products are compliant under all state VOC rules in effect on October 1, 2008.

Black	7606A33	**Each**	$5.35

Limestone	7606A36	**Each**	$5.35
White	7606A32	**Each**	$5.35

Polyurethane Adhesives/Sealants for Underwater Use

Whether you have a damp or completely submerged surface, these sealants provide tough seals. They bond to aluminum, fiberglass (FRP), and wood and have excellent tear and abrasion resistance. Application temperature range is +45° to +90° F; operating temperature range is –40° to +180° F. Come in a 10.1-oz. cartridge that fits a standard caulk gun. These products are compliant under all state VOC rules in effect on October 1, 2008.

Begins to Harden	Reaches Full Strength	*White*	Each	*Black*	Each

70 min.	3-6 days	75005A591	8.72	75005A593	8.72

3M Marine Adhesives/Sealants

Form a strong seal with these nonshrinking, high-performance adhesives/sealants that retain their strength in and out of water. Resist weather and salt water. Temperature range is –40° to +190° F. Cartridges fit a standard caulk gun. These products are compliant under all state VOC rules in effect on October 1, 2008.

5200 Standard and ***Fast—*** These polyurethanes can be used to bond fiberglass (FRP) and wood.

4000 Fast— This polyether has superior UV resistance and is non-corrosive and fast hardening. Use on fiberglass (FRP) and wood.

3M 2084 Aluminum Adhesive/Sealant

Bond and seal aluminum to glass. Sealant resists water, oil, and fuel. Begins to harden in 5 minutes; reaches full strength in 24 hours. Temperature range is –30° to +250° F. Color is aluminum. This product is compliant under all state VOC rules in effect on October 1, 2008.

5-oz. Tube ..... 7432A21 **Each** $14.80

Crystal-Clear Sealant for Plastics

Bonds ABS, acrylic, CPVC, PVC, fiberglass (FRP), Lexan, polyamide, polycarbonate, polyester (PET), polystyrene, and polyurethane. Begins to harden in 20-40 minutes; reaches full strength in 24 hours. Apply above 0° F; operating temperature range is –75° to +350° F. Fits standard caulk gun. This product is compliant under all state VOC rules in effect on October 1, 2008.

10.1-oz. Cartridge ..... 7322A31 **Each** $11.58

High-Strength Adhesives/Sealants

Bond and seal metal, ABS, acrylic, PVC, cement, glass, leather, rubber, some composites, tile, vinyl, and wood. These adhesives can be used on dissimilar materials and can be painted at full strength. Begin to harden in 4-5 minutes; reach full strength in 24-72 hours. Apply at +50° to +90° F; operating temperature range is –40° to +150° F. Come in a 10.2-oz. cartridge (unless noted) that fits a standard caulk gun. These products are compliant under all state VOC rules in effect on November 1, 2010, except in California.

Standard— Resist diluted acids and caustics. For indoor use.

Marine— An underwater sealant, it resists saltwater spray, most chemicals, and yellowing from sunlight exposure. For indoor and outdoor use.

Extra Thick— For indoor overhead and vertical use.

★ Comes in a 3.7-oz. tube.

Metal-Duct Sealants

Adhere to metal to seal low-, medium-, and high-pressure duct systems. Use indoors and out. Cartridges fit a standard caulk gun. These products are compliant under all state VOC rules in effect on October 1, 2008.

Standard— Begins to harden in 1 hour; reaches full strength in 48 hours. Temperature range is -25° to +200° F. Color is gray. Meets SMACNA (Sheet Metal and Air Conditioning National Assoc.) leakage requirements and UL Classification UL 723, Class 1.

10.5-oz. Cartridge	73335A65	**Each**	$5.12
1-gal. Can	73335A66	**Each**	$35.89

Extreme Temperature— Withstands temperatures from –60° to +500° F. Begins to harden in 20 minutes; reaches full strength in 24 hours. Color is gray. Meets Fed. Spec. TT-S-00230C Class A, TT-S-001543A Class A, and ASTM C920 Class 25.

10.1-oz. Cartridge ..... 73335A42 **Each** $5.68

High-Temperature Chemical-Resistant Adhesive

This high-performance fluoroelastomer adhesive bonds despite high temperatures, vapors, and extreme environments. Use for bonding rubber to metal, splicing fluoroelastomer cord stock into O-rings, and adhering oven door gaskets. Includes a bottle of accelerator. Begins to harden within minutes; reaches full strength in 24 hrs. Apply at +60° to +90° F; operating temperature range is –20° to +450° F. Color is black. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-pt. Can	7716A11	**Each**	$67.31
1-qt. Can	7716A12	**Each**	$96.15

High-Temperature Chemical-Resistant Sealants

A wide temperature range and excellent chemical resistance make these sealants perfect for harsh environments. Adhere to aluminum, brass, copper, stainless steel, concrete, and fabric. Resist acids, hydrocarbons, and chlorinated solvents. Begin to harden in 5 minutes; reach full strength in 72 hours. Apply at +50° to +100° F; operating temp. range is –40° to +400° F. Color is black. *Note:* Not for use with ketones and esters (acetone and ethyl acetate). 11-oz. cartridges fit a standard caulk gun.

Standard— This product is compliant under all state VOC rules in effect on October 1, 2009.

2.5-oz. Tube	77495A15	**Each**	$33.33
11-oz. Cartridge	77495A16	**Each**	$119.05

Extra Thick— For vertical use; has minimal shrinkage. This product is compliant under all state VOC rules in effect on March 1, 2011.

2.5-oz. Tube	77495A31	**Each**	$38.00
11-oz. Cartridge	77495A32	**Each**	$132.00

For information about adhesives, see page 3400.

Caulk

Seal and fill cracks and voids. All except *(A)* are paintable; all except *(J)* are waterproof. These products except *(C)* are compliant under all state VOC rules in effect on October 1, 2008.

Cartridges fit a standard caulk gun; see page 3428 for guns.

(A) 100% RTV Silicone— High-performance sealing. Remains permanently elastic. Weatherproof, mildew resistant, and FDA compliant. **To Order:** Please specify color: almond, aluminum, black, bronze, clear, or white (unless noted).

(B) Paintable 100% RTV Silicone— It's low odor and remains flexible. Color is white.

(C) Elastomeric Polymer Rubber Based— For all-weather exterior applications. Remains flexible. **To Order:** Please specify color: almond, black, bronze, brown, clear, gray, or white. Clear caulk is compliant under all state VOC rules in effect on March 1, 2011. Other colors are compliant under all state VOC rules in effect on March 1, 2011, except in California.

(D) Polyurethane— Remains flexible. **To Order:** Please specify color: black, bronze, gray, or white.

(E) Siliconized Acrylic— A combination of acrylic and silicone that's low odor and thick for overhead and vertical use. **To Order:** Please specify color: almond, black, dark brown, clear, gray, or white.

(F) Tub, Tile, and Sink— Mildew-resistant, odorless siliconized acrylic. Color is white.

(G) Vinyl— Resists mildew and water. Can be painted two hours after applying. **To Order:** Please specify color: almond, black, brown, clear, gray, or white (unless noted).

(H) Concrete and Mortar Repair— Patch cracks in concrete and repair mortar between bricks and stone. Color is gray.

(J) High Temperature— Silicate with a high operating temp. Works well for stoves, chimneys, and flues. Indoor use only. Color is black.

(K) Removable Weatherstripping— Makes a weatherproof, watertight temporary seal that peels off when no longer needed. Remove any time after 7 days and before 6 months. Caulk is a rubber blend. Color is clear.

♣ Available in clear and white only. ▲ Clear begins to harden in 2 hours.

Caulk Bead-Smoothing Spray and Tool

Get a perfect bead every time.

Smoothing Tool

Smoothing Spray— Used after laying a bead of caulk, it lets you smooth the caulk with a finger or tool for a perfect finish. Spray is nonflammable, odorless, won't stain, and can be painted when dry. Works with all caulks on any nonporous surface. Covers approximately eight 10-oz. cartridges of caulk or 400 linear ft. This product is compliant under all state VOC rules in effect on October 1, 2008.

Smoothing Tool— Use to smooth your caulk into a perfect bead. Made of plastic with a flexible rubber tip. It clips onto a caulk gun for easy access and comes with two caps for sealing your open caulk cartridges.

Smoothing Spray	7326A14	$7.67
Smoothing Tool	7146A23	2.40

All-Seal Sealant for Wet and Oily Surfaces

Instantly seal leaks despite oil, moisture, and water with this polycarbonate-based adhesive. Bonds to aluminum, galvanized metal, stainless steel, ceramic, concrete, glass, rubber, masonry, wood, and itself. It's UV resistant, immediately paintable, and stays flexible to allow for vibration. Ideal for sealing flashing, joints, and vents. Begins to harden on contact; reaches full strength in 72 hours. Application temp. range is +38° to +98°F; operating temp. range is –70° to +220°F. Comes in a 10.2-oz. cartridge that fits a standard caulk gun; see page 3428 for guns. This product is compliant under all state VOC rules in effect on January 1, 2011, except in California, unless noted.

To Order: Please specify color: black, brown, clear, gray, or white. Clear sealant is compliant under all state VOC rules in effect on January 1, 2011.

74565A1 ..... $18.27

Backer Rod

Reduce stress on caulk—insert backer rod into wide gaps and fill in with caulk to form a proper seal. Backer rod is made of polyethylene foam with a nonabsorbing skin that conforms to irregular widths. It's chemically inert and resists moisture. Temp. range is –45° to +160°F. Color is gray. This product is compliant under all state VOC rules in effect on October 1, 2008.

Dia.	Approx. Gap Wd.	100-ft. Coil		Full Coil Lg.	Full Coil

Caulk Cord and Tape

These products are compliant under all state VOC rules in effect on October 1, 2008.

Weatherstrip Caulk Cord— Keep out moisture and drafts with this permanently pliable titanium-dioxide-based cord. Cord is easily applied and removed by hand. It can be painted and adheres to metal, plastic, concrete, glass, masonry, wood, and other porous and nonporous surfaces. Cord does not harden. Apply at +60° to +90°F; operating temperature range is –30° to +150°F. Use indoors and out. Rolls have eight 3/16″ dia. cords.

Seal and Caulk Tape— This mildew-resistant, odorless low-density polyethylene easily seals and fills cracks around tubs and sinks. Just unroll, cut, peel off liner, and apply. Bonds to metal, plastic, fiberglass (FRP), glass, and wood. Reaches full strength in 10 hours. Application and operating temperature ranges are +50° to +110°F. Use indoors. Tape is 7/8″ wide.

Length	Color	Case Qty.		Each Partial Case	Each Full Case

Seal and Caulk Tape					Each
11 ft.	White	—	7582T25		$5.70

Silicone Sealing Strips

Use these extruded silicone strips with a 100% silicone sealant to create durable seals that allow for expansion and contraction. Place a bead of silicone sealant (see 7452A21 on page 3418) on each side of the strip for adhesion. Edges are ribbed for better grip. An alternative to a backer rod (though with more applications), it's ideal as a patch to seal and repair holes and wide gaps when standard caulks and sealants won't work. Good for skylights and HVAC seals. These products are compliant under all state VOC rules in effect on October 1, 2008.

To Order: Please specify length (1, 5, 10, 25, or maximum continuous length of 100 ft.) and color (black or gray).

Wd.	Thick.	Temp. Range		Per Ft. 1-99	Per Ft. 100-Up
1″	0.080″	–60° to +300°F	7159A1	$1.60	$1.33
2″	0.080″	–60° to +300°F	7159A2	3.20	2.67
3″	0.080″	–60° to +300°F	7159A3	4.80	4.00
4″	0.080″	–60° to +300°F	7159A4	6.40	5.33

For information about adhesives, see page 3400.

Glazing Compounds

Install glass in metal and wood sashes with these compounds. They form a tough protective coating yet allow normal expansion and contraction with changing temperatures. Compounds are oil based (unless noted) and can be painted. Color is white.

Reach full strength in 3-14 days. Application temperature range is +40° to +90° F. Cartridge fits a standard caulk gun; see page 3428 for guns. These products are compliant under all state VOC rules in effect on October 1, 2008.

♦ Water based.

Stay-Soft Glazing Rope

Easy to apply, this butyl rope seals leaks in ridges, eaves, gutters, and headers. Also holds glass in frames for a weather-tight seal. To use, uncurl rope and press in place. It stays soft and pliable for years. Application temperature range is −40° to +95° F; operating temperature range is −40° to +212° F. Diameter is 1/4″. Comes in 20-ft. roll. Color is gray. This product is compliant under all state VOC rules in effect on October 1, 2008.

1049A31 ..... Roll $7.99

Fire-Rated Glazing Tape

Seal glass windows into metal frames in fire-rated hollow metal and wood doors; this high-performance glazing tape is fire rated up to 1800° F. Application temperature range is 65° to 80° F. Tape has hot-melt rubber adhesive backing with a peel-off liner. UL 10C listed. This product is compliant under all state VOC rules in effect on October 1, 2008.

Hot-Melt Guns and Glue Sticks

Hot-Melt Guns

Mini Gun

Standard Duty Gun

Heavy Duty Gun

Whatever your needs, we have a glue gun for you. All guns reach operating temperature in just 2-5 minutes, have a power cord, and operate on 120 VAC, 60 Hz. To choose the right gun, keep in mind that the higher the watts, the faster the glue melts and can be dispensed. Glue sticks sold separately.

Mini—For working in tight areas. Has a 5′2″ long cord with two-prong plug. UL listed.

Standard Duty—Ideal for small jobs and light assembly work. Has a 5′9″ long cord with two-prong plug.

Low Temperature—Good for mid-volume jobs and temperature-sensitive applications. Has a 5′6″ long cord with three-prong plug. UL listed.

Heavy Duty—Continuous duty with three heating elements and a plastic stand. Has a 9-ft. long cord with three-prong plug. UL listed.

High Performance—Continuous duty with an ergonomic handle, a ceramic heating element, a lighted on/off switch, a magnetic metal base, and a wire nose stand. Has a 7′9″ long cord with three-prong plug.

Hot-Melt Glue Sticks

These glue sticks comply with FDA CFR21 175.105 for food packaging. These products are compliant under all state VOC rules in effect on October 1, 2008. *Note:* 1/4″ glue sticks work with any glue gun that accepts 1/4″ or 5/16″ diameter glue sticks. 1/2″ glue sticks are approximately 0.452″ in diameter and work with any glue gun that accepts 7/16″ or 1/2″ diameter glue sticks.

General Purpose—Use in low-, high-, and dual-temperature glue guns to bond plastic and wood.

Packaging—Bonds porous materials such as paper, cardboard, canvas, and fabric.

Quick-Hardening Packaging—Similar to the *packaging glue sticks* above, but this takes less time before it begins to harden. Bonds porous materials such as paper and cardboard.

High Performance—For difficult-to-bond materials including metal, plastic, ceramic, glass, and other nonporous items.

Cordless Hot-Melt Gun

Don't be tethered by a cord. This cordless gun quickly charges and heats in 5 minutes and runs for 3 minutes per charge. Delivers 1 lb. of glue per hour. Or use with the included power cord for continuous gluing; cord is 9-ft. long with a two-prong plug. Operates on 120 VAC, 60 Hz when used with the power cord. Operating temperature is 380° F. Uses 7/16″ and 1/2″ dia. glue sticks (not included, see glue sticks on this page). UL listed.

7578A11 ..... $22.72

Butane-Powered Cordless Hot-Melt Gun

Powered by butane gas (sold separately), this glue gun can run continuously for up to 140 minutes. Delivers 1.9 lbs. of adhesive per hour. Gun has a push-button start and reaches operating temperature in 3-4 minutes. Also has a safety lock on the fuel control to prevent unintentional gas flow, a fuel level window, and a built-in folding stand. Operating temperature is 392° F. Uses 1/2″ dia. glue sticks (four 6″ long sticks included).

Cordless Glue Gun 7812A21 $48.48
Butane Gas (5 1/8-oz. Can) 7694A5 4.88

For information about adhesives, see page 3400.

3M Scotch-Weld Hot-Melt Guns and Glue Sticks

Hot-Melt Guns

Get fast, even adhesive flow. Guns include a 0.090″ dia. tip; other tips are sold separately, unless noted. Operate on 120 VAC, 60 Hz. To choose the right gun, keep in mind that the higher the watts, the faster the glue melts and can be dispensed. *Note:* Use only with the 3M glue sticks below.

***Scotch-Weld LT*—**Use with low-melt glue sticks only. Has a 6-ft. long cord with three-prong plug.

***Scotch-Weld TC*—**Has a 6-ft. long cord with three-prong plug.

***Scotch-Weld EC*—**With five temperature settings, this gun works with most 3M hot-melt adhesives. It also includes a stroke adjuster that allows for repeatable output quantities. Has a 6-ft. long cord with three-prong plug.

***Scotch-Weld II*—**This air-powered gun has a fast-loading cartridge system and a wire bench stand. Requires 40-80 psi of air; has a 1/8″ NPT male air inlet and an 8-ft. long air hose. Has an 8-ft. long cord with three-prong plug.

***Scotch-Weld AE II*—**Get high output at an economical price. Has an 8-ft. long cord with three-prong plug.

***Scotch-Weld AE II LT*—**Similar to the AE II model above but operates at a lower temperature. Has an 8-ft. long cord with three-prong plug.

Scotch-Weld AE II and AE II LT

3M 1/2″, 5/8″, and 1″ Diameter Hot-Melt Glue Sticks

All except 3750, 3750LM, 3762LM, and 3796 are UL listed; all except 3750, 3750LM, and 3796 are FDA compliant. Reach full strength in 12 hours. These products are compliant under all state VOC rules in effect on October 1, 2008.

Note: These glue sticks work only with 3M Hot-Melt Guns.

***3738*—**Multipurpose for chipboard, corrugated materials, and wood.

***3748*—**Designed to add rigidity to printed circuit board components and other electronic applications. Noncorrosive to copper.

***3750*—**High flow rate. For packaging and wood assembly.

***3750LM Low Melt*—**Fast setting for packaging; use only with Scotch-Weld AE II LT.

***3762*—**Rapid setting and medium viscosity for hot-tacking (bonding while still warm). Bonds cardboard and carton-sealing paper.

***3762LM Low Melt*—**Similar to 3762 but for Scotch-Weld LT and EC only. Has excellent hot-tacking (bonding while still warm) at a low application temperature for heat-sensitive materials such as polystyrene foam.

***3764*—**Designed for use with plastic.

***3779*—**Heat resistant to 300° F, so it's particularly useful for encasing electrical parts in adhesive (potting) and attaching parts to PC boards.

***3789*—**Use to bond flexible and rigid plastic. Impact resistant and heat resistant up to 220° F.

***3792*—**Versatile, all-around adhesive for wood and fabric.

***3792LM Low Melt*—**Same as 3792 but for plastic. Use with Scotch-Weld LT and EC only. Can be applied at a lower temperature.

***3796*—**Specially designed for bonding metal. Also good for plastic, leather, and other nonporous materials.

★ Requires quadrack converter (sold separately above) for use with gun. ● 22-lb. box.

For information about adhesives, see page 3400.

High-Strength Hot-Melt Adhesive Kit

Adhesives are polyurethane for higher strength bonds and shorter bonding times than with other hot melts. Kit includes a cordless applicator gun with charger/heating base, one 50-g multipurpose glue cartridge (7354A23), two 50-g wood-to-wood glue cartridges (7354A21 and A22), and a carrying case. Gun operates at 200 watts, heats up in 10-13 minutes, and runs for 20 minutes per charge. Operating temperature range is 212° to 284° F. Charger has a 6½-ft. power cord with two-prong plug. UL listed. Kit bonds metal, plastic, brick, ceramic, fiberglass (FRP), glass, and wood. Glue cartridges reach full strength in 24-48 hours. They're waterproof and for use indoors and out. Melting point is 275° F. Color is opaque white. Glue cartridges are compliant under all state VOC rules in effect on October 1, 2008.

	Begins to Harden		
Complete Kit	———	7354A11	$166.08
Applicator Gun	———	7354A66	136.30

Wood-to-Wood	60 sec.	7354A22	11.07

3M Aerosol Adhesives

Spray a neat, thin, uniform coating. Reach full strength in 24 hours (unless noted). These products are compliant under all state VOC rules in effect on October 1, 2008.

Note: Application time is the time the adhesive can be on one or both surfaces before the surfaces must be bonded.

72 Pressure Sensitive— A tacky adhesive that makes wide-area bonds and can be repositioned hours after spraying. Bonds carpet backing, foam padding, plastic, polyethylene, and other materials to fiberglass (FRP), hardwood, steel, particleboard, and plastic.

74 Foam— Fast tacking, it bonds flexible urethane and latex foam to themselves and to metal, plastic, and wood. Not for vinyl plastics.

75 Repositionable— Ideal for production-line work involving lightweight material (such as paper masking) where parts are temporarily held in place prior to assembly.

76 High Tacking— For strong bonds of lightweight materials like cardboard, and wood to themselves and to metal, glass, and wood.

77 Multipurpose— A tacky, high-coverage, fast-drying adhesive for permanently attaching cardboard, cloth, foils, and paper to metal, hardboard, flexible and rigid foams (except polystyrene and polyethylene foams), wood, and other base materials.

78 Insulation— Fast drying for bonding most kinds of insulation, including expanded and extruded polystyrene.

80 Rubber and Vinyl— High strength with excellent resistance to plasticizing oils. Bonds leather, rubber (except EPDM), and vinyl.

90 High Strength— Fast tacking, it begins to dry in 2 minutes. Bonds metal, particleboard, polyethylene, polypropylene, SBR, and wood.

Shipping-Mate Case Sealing— Heat resistant. Bonds in 10 seconds to permanently seal flaps on corrugated containers.

Shipping-Mate Palletizing— Immediate tacking for holding paper and plastic bags securely in place during storage and shipment. The bags won't tear when unstacked from a pallet.

3M Item	Max. Temp.	Application Time: With Adhesive on One Surface Only	Application Time: With Adhesive on Both Surfaces	fl. oz. (Net Wt.)	Color		1-11	12-Up

★ Forms a temporary bond (does not harden).

Economy Aerosol Adhesives

These products are compliant under all state VOC rules in effect on October 1, 2008.

General purpose is all purpose with good adhesion to cardboard, cloth, felt, foam rubber, glass, paper, and plastic. Begins to harden immediately.

Heavy duty is a high-strength, fast-tacking adhesive that is especially good for brick, concrete, and drywall. Also works with fabric, foam, paper, and plastic. Begins to harden immediately.

Contact forms strong bonds on most materials in 5 minutes. Permanently bonds flexible materials, such as laminates and plastics, to metal, vinyl, wood, and other rigid surfaces.

	fl. oz. (Net Wt.)	Color		
General Purpose	16.8 (11)	Light Tan	7494A1	$10.35
Heavy Duty	15.9 (11.5)	Light Tan	7494A2	10.70
Contact	18.3 (14)	Light Tan	7494A3	9.37

Devcon Duco Cement

The perfect multipurpose glue for bonding aluminum, bronze, cast iron, stainless steel, steel, ceramic, Garolite (phenolic laminates), glass, leather, and wood. Begins to harden in 10 minutes; reaches full strength in 16 hours. Temperature range is –40° to +140° F. Color is clear. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-oz. Tube 7447A16 $3.58

Rubber Cement

Quickly bonds paper and allows repositioning until fully dried. Cement spreads evenly; dries without shrinking. Color is translucent. These products are compliant under all state VOC rules in effect on January 1, 2011.

8-oz. Jar	74725A12	$4.38
1-qt. Can	74725A14	12.51
1-gal. Container	74725A15	31.94

Reusable Adhesive Putty

No need for tape or tacks—a small piece of this putty holds up paper, cardboard, even keys. It won't dry out, so you can use it again and again. It's nontoxic and sticks to most dry surfaces, including concrete, glass, metal, tile, and wood. Removes easily from most surfaces without leaving stains or residue. Temperature range is 70° to 100° F. Color is blue. This product is compliant under all state VOC rules in effect on October 1, 2008.

Comes in a 1-oz. package; full case quantity is 12 packages.

	Pkg. Partial Case	Pkg. Full Case
7576A2	$3.36	$2.76

Glue Sticks

Bond cardboard, fabric, paper, photos, and more with these easy-to-apply sticks. Begin to harden in 10-60 seconds; reach full strength in 5 minutes. Color is white (dries clear). These products are compliant under all state VOC rules in effect on October 1, 2008.

Size	Dia.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
0.21 oz.	¾"	6	66285A73	$1.11	$0.89
0.77 oz.	1"	6	66285A74	2.18	1.78

Elmer's Glue

This fast-setting white glue dries clear. Use on paper, wood, and other porous/semiporous materials. Begins to harden in 10-60 seconds; reaches full strength in 35 minutes. This product is compliant under all state VOC rules in effect on October 1, 2010.

Size		
8-oz. Bottle	7516A1	$3.12
1-pt. Bottle	7516A6	5.30
1-gal. Jug	7516A4	17.86
5-gal. Pail	7516A5	92.48

General Purpose Adhesive with Roll-On Applicator

Press down on bottle's tip to quickly and easily apply glue. Bonds paper to paper, paper to wood, and wood to wood. *1 qt.* does not include a nozzle; use to refill applicators. These products are compliant under all state VOC rules in effect on October 1, 2008.

Size (Nozzle Dia.)		
10-oz. (⅛")	7553A65	$45.89
10-oz. (½")	7553A64	45.89
1-qt.	7553A74	15.33

For information about adhesives, see page 3400.

Neoprene Rubber Repair Adhesive

Repair rips and fill holes in neoprene rubber materials. Adhesive is waterproof and flexible (up to 500% elongation). Use only on dry surfaces. Begins to harden in 20 minutes; reaches full strength in 18 hours. Temperature range is –20° to +200° F. Color is clear. This product is compliant under all state VOC rules in effect on October 1, 2008.

2-oz. Tube	73325A21	$8.93

Vinyl Repair Adhesive

Easily mend rips, tears, and holes on flexible vinyl surfaces. Great for awnings and upholstery. Begins to harden in 30 minutes; reaches full strength in 4 hours. Temperature range is –10° to +200° F. Color is clear. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-oz. Tube	7504A11	$5.73

Fabric Adhesive

Make flexible, permanent, nonflammable repairs on most fabric. Especially good for mending acrylic fabrics, canvas, and leather. Adhesive is waterproof. Begins to harden in 20 seconds; reaches full strength in 15 minutes. Temperature range is 30° to 212° F. Color is translucent. This product is compliant under all state VOC rules in effect on October 1, 2008.

6-oz. Bottle	7540A11	$10.69
16-oz. Bottle	7540A12	18.48

High-Tack Glue

Formerly known as LePage's Original Glue, this adhesive makes high-strength bonds on cloth, glass, leather, metal, paper, rubber, and wood. You can also apply it to a surface, allow to dry, and reactivate when desired by moistening with water. Begins to harden in 2 hours; reaches full strength in 12 hours. Temperature range is –30° to +500° F. Color is tan. This product is compliant under all state VOC rules in effect on October 1, 2008.

1-qt. Bottle	7466A7	$18.30
1-gal. Can	7466A8	43.30

Glue Discs

Like small circles of hot-melt glue, these pressure-sensitive discs make quick and easy bonds. They're 0.012″ to 0.015″ thick, clear, and supplied between two liners. Operating temperature range is 40° to 160° F; apply at 60° to 100° F. These products are compliant under all state VOC rules in effect on October 1, 2008. *Sheets* have 80 discs. *Rolls* have 1,000 discs.

Sheet

Medium tacking is for temporary bonding and removes easily from surfaces. ***High tacking*** is high strength, but still removable from some surfaces. ***Super-high tacking*** is for permanent bonding.

	Approx. Disc Dia.	Sheets Each		Rolls Roll	
Medium Tacking	½″	7187A21	$3.22	7187A31	$28.64
High Tacking	½″	7187A22	3.22	7187A32	28.64
Super-High Tacking	½″	7187A23	3.22	7187A33	28.64

Extra-Thick Adhesive Strips

Get a permanent bond on rough and uneven surfaces. Strips are a rubber adhesive and provide instant grip without mess—simply peel off the liner on one side and stick adhesive to surface, then peel off the liner on the other side and adhere your object. Adhesive is nontoxic, acid free, and moisture resistant. Strips hold up to 2 lbs., can be cut to any size, and remove cleanly. Holding capacity decreases when strip is cut. Adheres to metal, plastic, carpet, cement, fabric, foamboard, tile, wallboard, and wood. Apply above 50° F; operating temperature range is 0° to 180° F. Each adhesive strip is 3″ Lg. × 1″ Wd. × 0.020″ Thick. These products are compliant under all state VOC rules in effect on October 1, 2008.

8 Strips	3524A21	Pkg.	$4.47
250 Strips	3524A36	Pkg.	$50.64

Glue-on-a-Roll

Also known as adhesive transfer tape, these thin strips of pressure-sensitive adhesive let you apply a neat, precise strip of adhesive exactly where you need it. Come on peel-away liners. Glue-on-a-roll is a good alternative to liquid adhesives, hot melts, and staples and is thinner and more conformable than tape with adhesive on both sides. These products are compliant under all state VOC rules in effect on October 1, 2008.

For tape with adhesive on both sides, see pages 3451-3454.

Glue-on-a-Roll with Applicator Gun (7628A14)

Hand-Dispensed Glue-on-a-Roll

3M Scotch Glue-on-a-Roll and Applicator Guns

Adhesives are acrylic. Use with the applicator gun (sold separately).

Scotch 924 All-Purpose— Good for bonding paper. Also use on metal, plastic, glass, and wood. Maximum operating temperature is 180° F.

Scotch 926 High Performance— Has high bond strength and UV and high-temperature resistance. Perfect for foam insulation, folders, and boxes. Maximum operating temperature is 300° F.

Scotch 928 High Tacking/Low Tacking— Has a permanent high-tacking adhesive on one side, and a low-tacking adhesive on the other that is removable from most surfaces. A great choice for temporary protective packaging, such as foam and cardboard. Maximum operating temperature is 120° F.

Scotch 969 High Tacking— Has quick, strong adhesion right after application. Good for plastic and materials that have a glossy coating. Maximum operating temperature is 180° F.

Applicator Guns— Easily apply glue-on-a-roll while removing the liner with no mess and no waste.

ATG3662 Applicator Gun for 2″ Glue	7628A31	Each	$716.47

Hand-Dispensed Glue-on-a-Roll

Similar to the adhesive above, but this is applied by hand—no applicator gun needed. All come in 60-yard rolls with a 3″ dia. core.

Acrylic— Use to splice paper, films, and foils. Operating temperature range is 0° to +180° F; apply at room temperature.

Scotch 465— An acrylic adhesive, it bonds similar and dissimilar materials. Good on metal, plastic, glass, and wood. Maximum operating temperature is 180° F.

Silicone— Withstands much higher and lower temperatures than acrylic. Use on flexible circuits, gaskets, and heaters. Operating temperature range is –100° to +500° F; apply at +50° or higher.

3M Very High Bond (VHB)— Use instead of rivets, spot welds, and other permanent fasteners. Bonds metal, plastic, and ceramic. Has excellent UV resistance and can be used indoors and out. Maximum operating temperature is 300° F.

For information about adhesives, see page 3400.

Caulk Guns

Dispense caulk with ease and control. Guns are steel, unless otherwise stated. Rods are either serrated for ratchet action or smooth for quiet, seamless operation. Include a ladder hook, seal puncture tool, and cartridge tip cutter (unless noted). A higher thrust ratio means easier dispensing action.

(A) 7622T23 has a rubber handle and trigger. 7622T25 comes with a wrist strap.

(B) Guns are lightweight. 7636T31 comes with a bead finishing tool and two nozzle caps. 7636T34 is plastic with a rubber handle and trigger; includes a bead finishing tool.

(C) Guns are drip-free. 9263T11 comes with a bead finishing tool and two nozzle caps. 9263T12 has a revolving frame with rotation lock for proper bead application, a dual stroke for faster and easier application, and a rubber handle and trigger.

(D) Includes a wrist strap.

(E) Guns have a rotating frame that pivots around the rod for easy bead application and a zinc-alloy handle and trigger. 76015T16 has extra thrust for high-viscosity materials and support straps for cartridges.

▲ Doesn't include ladder hook, seal puncture tool, or cartridge tip cutter. ★ Doesn't include seal puncture tool or cartridge tip cutter.

Air-Powered Caulk Guns

Compressed air does the work for you. Guns should be used with an air pressure regulator. *Styles F-H* do not include a regulator; *Style J* does include a regulator. See pages 972-974 for air pressure regulators.

(F-H) Standard Caulk Guns— Have a pistol-grip. *Styles F* and *G* have a 10-ft. air hose with 1/4″ NPT male air connection. *Style F* has a molded plastic handle and barrel. *Style G* has a cast-aluminum handle with seamless aluminum barrel. *Style H* has a 3-ft. air hose with a 1/4″ NPT male air connection. Handle and barrel are molded plastic.

(J) Adjustable-Flow Caulk Guns— No external air regulator needed; a built-in regulator lets you adjust the air pressure up to 100 psi. Guns are equipped with a 1/4″ NPT male air connection in the handle and include a quick-disconnect fitting. Air hose is not included. Guns have a seamless aluminum barrel and a plastic handle.

	For Cartridge Size	Max. psi		Each
F	10- to 13-oz.	70	**7679T11**	$50.57
G	10- to 13-oz.	100	**7679T13**	104.97

Repl. Charger for 7631T57	**7631T59**	67.80

Caulk Gun Holster

Carry your caulk gun on your belt. Holster is canvas with an outside pocket, a rag holder, a belt loop, and a clip for attaching to your pants.

7774T33 ..... **Each** $14.57

Extensions for Caulk Cartridges and Bulk-Load Caulk Guns

Flexible Extension for Cartridges— Bends up to 180° to get caulk into hard-to-reach areas. Press the extension onto the caulk tube to extend up to 12 1/2″.

7809A11 ..... **Each** $2.44

Extension Kit for Cartridges and Bulk-Load Guns— With an adapter, two angle joints, and four nozzles, this kit lets you put a bead of caulk anywhere. Fits threaded cartridges and bulk-load caulk guns. Also for Albion, Cox, and Newborn barrel-style guns.

7809A17 ..... **Each** $8.38

Caulk Gun Conversion Kit

This reusable kit lets you use a 50-ml cartridge with a standard caulk gun. Includes a polypropylene sleeve to hold the cartridge in the gun and a plunger to dispense contents. Recommended for use with mixer nozzles for 50-ml cartridges (sold separately on page 3430). Package quantity is 10.

To Order: Please specify 1:1 or 2:1 mix ratio.

74695A77 .... **Each** Partial Pkg. $3.36 Full Pkg. $2.68

Caulk Cartridge Sealer

Stop caulk from drying out—this unique sealer includes a cone to place over the cartridge tip for the first seal and a barbed T-handle pin for inserting into the cone to complete the seal. Twist and pull out the pin to loosen the caulk and resume an easy flow. Made of white plastic.

7554A14 ..... **Each** $1.43

Notched Trowels

Steel

Steel Trowel with Handle—Has 1/4″ U-shaped notches on two sides and a wood handle. Size is 11″×4 1/2″.

7612T24 ..... **Each** $14.81

Plastic with Handle

Plastic Disposable Trowels with Handle—Have V-notches on all four sides and a molded handle. Size is 8 1/2″×4 1/4″. Full package quantity is 12.

Notch Size		Each Partial Pkg.	Each Full Pkg.
3/32″	**7683T15**	$1.33	$1.16
1/8″	**7683T16**	1.33	1.16
3/16″	**7683T17**	1.33	1.16

Plastic without Handle

Plastic Disposable Trowels without Handle—Have different size notches on each side. Overall size is 4 1/4″×4 1/4″.

Notch Style	Notch Sizes	Pkg. Qty.		Per Pkg.
V-Notch	1/8″, 3/16″, 1/4″, Straight	36	**9405T63**	$15.07
Square Notch	1/16″, 1/8″, 1/4″, 1/8″×1/4″	36	**9405T64**	15.07

Laminating Rollers

Smooth Rollers

Also known as brayers, these acrylic rollers press down surfaces to be laminated or bonded. Won't pick up rubber cement, wax, or clay during use. Great for burnishing. Handle is plated steel.

Roller Dia.×Wd.		Each
1″×4″	**7533A12**	$10.07
1″×6″	**7533A13**	11.63
1″×8″	**7533A14**	13.96

Grooved Rollers

Roll through wet fiberglass laminates with little hand pressure; thin ridges on these aluminum rollers allow air to escape easily. Handle is wood and has a 3/4″ Acme threaded hole for handle extensions.

Roller Dia.×Wd.		Each
3/4″ ×3″	**7722T11**	$14.47
3/4″ ×6″	**7722T12**	19.00

Adhesive Dispensing Guns, Cartridges, and Nozzles

Air-Powered Dispensing Gun

Empty Cartridge

Cartridge Holder for Air-Powered Gun

Standard Nozzle

Ribbon Nozzle

Roller Nozzle

Ideal for use with one-part adhesives, silicones, caulks, grease, and other thick materials.

Dispensing Guns

Use with empty cartridges and cartridge holders (sold separately).

Manual guns are similar to a caulk gun and are for smaller dispensing jobs. ***Air-powered gun*** provides controlled, smooth, even dispensing—great for small or large jobs. Gun requires air hose (sold below). Hose has a 1/4″-28 female fitting on one end that connects directly to the gun while the other end has a 1/4″ male industrial-shape quick-disconnect attachment that connects to the air supply. Operating range is 0-100 psi.

Accessories

12.8-oz. Adapter— Permits any standard 12.8-oz. disposable cartridge to be used with the nozzles above. Package quantity is 10.

7579A36 ..... **Per Pkg.** $19.51

Luer Lock Adapter— Allows use of Luer Lock needles with cartridges for more precise dispensing (see page 3432). Package quantity is 10.

7579A37 ..... **Per Pkg.** $9.38

Nozzle Extension— Allows you to get into hard-to-reach areas. Extension is 6 3/8″ long.

7579A35 ..... **Each** $6.43

For information about adhesives, see page 3400.

Plastic Syringes

Regular Luer Lock Tip

Regular Taper Tip

Air-Operated Luer Lock Tip

All syringes are polypropylene and sold in packages of 10, unless noted. *Luer Lock syringes* do not come with needles. Needles are sold separately on this page and page 3432. *Taper-tip syringes* allow you to cut the tip to widen the opening to the diameter you need.

Regular—Use to apply adhesives, pastes, sealants, grease, and other materials. Syringes include a barrel, piston, and plunger rod. 7510A651, *A652, A653, A654, A656,* and *A665* have milliliter graduations on the barrel.

Air Operated—Designed for repetitive gluing operations, these syringes are for air-operated dispensing systems (sold separately on this page). They include a barrel and a piston.

Luer Lock tip caps cover Luer Lock syringes when not using a needle. Package quantity is 10.

■ Sold in packages of 5.

♦ Available in less than full-package quantities. Prices are approximately 20% higher.

★ Extra-large tip for thicker (more viscous) materials.

Micro-Dispensing Cartridge

Mixer Nozzle

Cartridge

Only need a smidge? This two-part cartridge is perfect for applying tiny amounts of adhesive. Each part holds 5 ml (0.17 oz.). Includes a plunger and two pistons. Mix ratio is 1:1. For other dispensing cartridges, see page 3430.

Optional mixer nozzle lets you mix and dispense simultaneously. Has a push-on bayonet-mount style with an H-taper tip nozzle.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

Plastic Dispensing Tapered Tips

Create the tip size you need—the tapered tip can be cut to the desired diameter. The tapering also reduces dripping. Needles are polypropylene so they won't scratch surfaces. Plus, when you're done with them there's no messy clean-up, just throw them away. They have a Luer Lock hub that fits bottles and syringes with Luer Lock connections. Length is 1¼″.

● Prices are 20% less when you order in full-package quantities.

Air-Operated Dispensing Systems

For consistent dispensing of adhesives, these systems have a foot pedal to control the amount released. All have a ¼″ male quick-disconnect air inlet and operate at 0-100 psi.

Note: Systems do not include syringes, syringe holder, or syringe adapter; they can be used with the starter syringe kit and the universal syringe adapters shown below, and the 66305A Air-Operated Plastic Syringes on this page.

Systems

Foot Valve System

Shot Meter System

Foot Valve Systems—A more economical choice than the shot meter systems, these systems require no electrical hook-up or table space. Choose with or without drip-free vacuum control. 66505A11 is 3.75″ Ht.×3.75″ Wd.×7.25″ Dp.; 66505A33 is 3.75″ Ht.×3.75″ Wd.×8.5″ Dp.

Shot Meter System—Includes a tabletop control unit with foot pedal, drip-free vacuum control, adjustable dials to control air pressure and vacuum, and an easy-to-read pressure gauge. Runs on 115 or 230 VAC, 50/60 Hz. Internal voltage is 24 VAC. Unit is 5″ Ht.×5″ Wd.×7.75″ Dp.

Shot Meter System with Timer Control—Similar to shot meter above but with a four-position digital timer switch to set dispensing time in hundredths/second, tenths/second, and seconds for exact repeatability of dispensing time. Dispensing time duration is 0.01 to 99.99 seconds. Size is 5″ Ht.×6.25″ Wd.×7.75″ Dp.

Accessories

Universal Syringe Adapter

Syringe Holder Stand with Syringe

Starter Syringe Kit—Has four syringe adapters (3, 5, 10, and 30 cc), a needle and syringe assortment, a syringe holder stand, an inline material filter, a 2-oz. squeeze bottle, and disposable gloves.

Universal Syringe Adapter—Convert any standard plastic syringe with flanges into an air-operated dispensing syringe. Adapters have a gasket seal and a 360° swivel for easy operation. Include a 6-ft. long hose with male fitting. Compatible with taper-tip and Luer Lock syringes. Replacement gaskets are sold in packages of 5.

Syringe Holder Stand—This metal stand holds syringes vertically with the tip pointing down.

Polypropylene Dispensing Needles

Made of polypropylene, these needles are an economical alternative to the PTFE needles on page 3432. Dispense most fluids, adhesives, solvents, fluxes, oils, and pastes then throw them away when you're done. Needles have a flexible blunt tip that can be cut to any length and gets into hard-to-reach areas and a plastic Luer Lock hub that fits syringes and bottles with Luer Lock connections. Plus, since they're polypropylene they won't scratch delicate surfaces. Length is 1½″.

● Prices are 20% less when you order in full-package quantities.

For information about adhesives, see page 3400.

Type 304 Stainless Steel and PTFE Dispensing Needles

Dispense all kinds of fluids, adhesives, solvents, fluxes, oils, and pastes. These needles have a blunt tip and a polypropylene Luer Lock hub designed to fit syringes and bottles with Luer Lock connections.

Type 304 Stainless Steel Needles— Package quantity is 50 except 75165A31, which is a package of 10.

PTFE Needles— Needles have PTFE tubing that can be cut to length. They're flexible for hard-to-reach areas and won't scratch delicate surfaces. Plus, their nonstick surface makes them perfect for instant adhesives. Package quantity is 10. Available in less than full-package quantities. Prices are 25% higher.

12-Piece Type 304 Stainless Steel Needle Assortment— Consists of one of each gauge of the 1″ long stainless steel needles.

Push-On Needle Covers— Made of translucent polypropylene.

Reusable Type 304 Stainless Steel Dispensing Needles

With Luer Lock Hub

With 1/8″ and 1/4″ NPT Hub

The nickel-plated brass hub on these needles allows them to be cleaned, washed, boiled, or sterilized and reused. Thicker walls make needles extra durable for dispensing adhesives, solvents, and other fluids and pastes. Needles have a blunt tip. Use 2″ and 4″ long needles for general purpose jobs and 1/4″ long needles in space-restricted areas.

Needles with Luer Lock hub can be used with syringes and bottles with Luer Lock connections.

Needles with 1/8″ or ***1/4″ NPT hub*** can be directly connected to an adhesive cartridge or a grease gun.

10-Piece Set with 1/4″ NPT hub includes two 1/4″ NPT hub needles in each of the following gauges: 10, 13, 16, 19, 22.

10-Piece Set with 1/4″ NPT Hub	7590A58	Per Set	$47.27

Reusable Stainless Steel Precision Dispensing Needles

Get precise, consistent dispensing of epoxies, oils, and other fluids without drips. Needles have a 90° razor-sharp tip that provides accurate dispensing and allows you to punch holes in soft solids. Plus, the stainless steel construction means they're durable and corrosion resistant. They have a nickel-plated brass Luer Lock hub and fit syringes and bottles with Luer Lock connections. Use manually and in automated dispensing systems.

Hand-Held Tape Dispensers

All have a metal blade and an adjustable brake (unless noted) to control tension. Use with carton sealing tape on pages 3435 and 3436. Tape is not included except for Style H. ***Styles A-G*** have molded plastic handles for operator comfort and a wipe-down flap to smooth tape to the surface.

(A&B) Economy—Frames are lightweight and made of metal and plastic. *Style A* has a plain handle; *Style B* has a foam-covered cushion-grip handle for added comfort.

(C) Economy Retractable Blade—To prevent accidental cuts, the blade stays retracted until pressure is applied to the wipe-down flap. Dispenser has steel and plastic construction.

(D) Standard—Has a durable, heavy steel frame and a nonslip handle.

(E) Wide—Designed for wide tape, these dispensers have steel and plastic construction.

(F) Heavy Duty—Have a rugged painted steel frame to withstand heavy abuse. A rubber roller keeps tape in ready position.

(G) Ergonomic—Lightweight plastic construction is designed for user comfort.

(H) 3M Hold-A-Roll—Dispenser fits in your hand for greater control and precision. Made of lightweight plastic. Comes with two rolls of 3M Scotch #375 polypropylene carton sealing tape.

(J) Economy Hold-A-Roll—Imported version of Style H.

Table-Top Tape Dispensers

Single-Roll Economy | ***Single-Roll Comb. Core*** | ***Single-Roll Heavy Duty*** | ***Multi-Roll Heavy Duty*** | ***Multi-Roll Economy*** | ***Multi-Roll Standard (75725A74)*** | ***Multi-Roll Extra Wide***

Single-Roll Dispensers—Durable, high-impact plastic body (unless noted) with a nonskid base pad for stability. For use with masking, paper, film, and Scotch tape. Tape not included.

Economy has a metal and plastic body. **To Order:** Please specify beige, black, or brown.

Combination core comes with two spools so you can use 1″ or 3″ ID tape. **To Order:** Please specify beige, black, or brown.

Heavy duty has a weighted base. Can also be used with filament tape. Color is beige.

Multiple-Roll Dispensers—Keep all of your tape in one dispenser. For use with masking, paper, film, Scotch, and filament tape. Tape not included.

Heavy duty accommodates one 2″ wide tape roll or two 1″ wide rolls. Made of high-impact plastic with a nonskid base. Color is tan.

Economy holds three 1″ wide tape rolls or any combination up to 3″ wide. Made of plastic with a weighted base. Color is blue.

Standard are constructed of plastic with a weighted base. Color is beige. 75725A72 holds two 1″ wide tape rolls or one 2″ wide roll. 75725A74 holds six 1″ wide tape rolls or any combination up to 6″ wide.

Extra wide is constructed of metal with suction cups on the base. Color is beige. 76765A1 has a tape holder that adjusts from 1″ to 10″ wide; it holds up to three tape rolls. 76765A2 has a tape holder that adjusts from 1″ to 18″ wide; it holds up to six tape rolls.

Clamp-On Dual-Roll Tape Dispenser

Clamps to any work table for maximum stability, yet it's easily moved since it's not permanently mounted. Has two spindles—each holds up to a 1″ wide roll of tape on a 3″ ID spool. Or use both spindles to hold one roll of tape up to 2″ wide on a 3″ ID spool. Maximum roll diameter is 5½″. Dispenser is steel with plastic spools. Measures 6¾″ Lg. × 2¼″ Wd. × 5″ Ht. with a 2½″ clamp capacity. Color is blue. Use with masking, filament, drafting/art, and Scotch tape. Tape not included.

Dispenser	12725A11	$27.08
Replacement Blade	12725A36	7.00

Measured-Length Table-Top Tape Dispensers

A

B

C

D

Quickly dispense the exact length of tape you need, saving tape and time. Use Styles A-C with Scotch and masking tape. Use Style D with Scotch, masking, and filament tape. Do not use any with duct tape. Tape not included.

(A) Economy Manual Lever— This economical dispenser has a lever to adjust tape length and ensure repeatable lengths. Lengths are cut off manually. Can also dispense two 1/2″ wide rolls of tape at the same time. Maximum roll diameter is 4 3/4″. Size is 6 1/4″ Lg.×3 1/2″ Wd.×4 7/8″ Ht. Plastic construction. Color is black.

(B) Standard Manual Lever— Set the sliding gauge to desired length; then pull the lever to dispense. Lengths are cut off manually. Maximum roll diameter is 5 3/4″. Size is 10 3/4″ Lg.×4 1/2″ Wd.×7″ Ht. Constructed of steel and plastic. Color is tan.

(C) Electric or Battery Operated— Plug into an outlet (operates on 115 VAC, 60 Hz) or use with batteries (operates on three D-cell batteries, not included). This dispenser automatically feeds tape to one of the three selectable lengths listed in the table. Lengths are cut off manually. Includes a 6-ft. cord with two-prong plug. Maximum roll diameter is 5 1/4″. Size is 7″ Lg.×3 3/4″ Wd.×4 1/2″ Ht. Plastic construction. Color is black.

(D) Electric— This versatile dispenser has an auto-repeat function to continuously dispense and cut tape to set lengths. Also includes a manual override feature. Has a three-digit LED display and touch pad for easy use. Maximum roll diameter is 7″. Operates on 110 VAC, 60 Hz and includes a 5-ft. cord with three-prong plug. Size is 8 1/2″ Lg.×5 1/2″ Wd.×6″ Ht. Constructed of steel and plastic. Color is gray.

Dispensers for Water-Activated Kraft Paper Tape

E

F&G

H&J

K-M

(E) Pull-and-Tear Dispenser— Tape becomes moistened as you pull it. Then simply tear it off using the built-in heavy duty serrated-edge blade. Use with water-activated nonreinforced paper tape. Tape not included. Holds 7 oz. of water and has a 3 3/16″ Wd.×1/2″ Thick. moistening brush, a corrosion-resistant steel frame, and nonskid rubber feet.

	Accepts Tape Width	Max. Tape Roll Dia.		
E	1″ to 3″	7″	76215A15	$112.08
Replacement Brush			76215A16	32.07
Replacement Blade			76215A17	32.07

(F-J) Self-Cutting Manual-Lever Dispensers— Just pull the lever for quick tape dispensing. Fewer moving parts and an enclosed housing mean minimal maintenance. Dispensers have guillotine-action blade and graduated cutting scale with an adjustable stop. For use with water-activated nonreinforced and reinforced paper tape. Tape not included.

Styles F and *G* have a left-side handle and adjust tape length in 2″ increments. Include a 44-oz. capacity water tank and two-brush moistening system (brushes are 3 3/4″ Wd.×1/2″ Thick.). Both have a steel and plastic housing with nonskid rubber feet. *Style G* can also be used with pull-tab water-activated tape (see 6161A33 on page 3436).

Optional heater (sold separately) quickly activates glue to ensure good adhesion. Operates on 115 VAC, 60 Hz and has an 8-ft. cord with three-prong plug.

Styles H and *J* have a right-side handle and adjust tape length in 4″ increments. Include an extra-large 70-oz. capacity water tank, adjustable pressure pad, and a one-brush moistening system (3 1/2″ Wd.×1″ Thick.). Housing is lightweight, corrosion-resistant plastic. *Style J* is furnished with a heater that quickly activates glue to ensure good adhesion. Heater operates on 115 VAC, 60 Hz and has a 7-ft. cord with three-prong plug.

	Length Dispensed	Accepts Tape Width	Max. Tape Roll Dia.	Dispensers	Each	Optional Heater	Each	Replacement Brushes	Set	Replacement Water Tanks	Each

♣ Set of two brushes.

(K-M) Electric Dispensers with Heater— Carton sealing is effortless with these electric dispensers. Tape lengths are selected, cut, and dispensed with the press of a button. Choose one of 14 set tape lengths or push the override button for other lengths. Dispensers have a top heater for full glue activation, guillotine-action blade, 34-oz. water tank, three-brush moistening system (brushes are 3 21/32″ Wd.×1 5/16″ Thick.) for glue activation, and an easy-to-use color-coded keypad. For use with water-activated nonreinforced and reinforced paper tape (unless noted). Tape not included. Housing is made of steel and plastic with a stainless steel tape path. Operate on 110/120 VAC, 60 Hz and have a 6-ft. cord with a three-prong plug.

Style L has auto-repeat function to continuously dispense and cut tape. *Style M* can also be used with pull-tab water-activated tape (see 6161A33 on page 3436).

About Carton Sealing and Kraft Paper Tape

When choosing carton sealing and kraft paper tape, keep in mind the different types of adhesives. The chart below will help you select the tape with the best adhesive for your application.

Applications	Synthetic Rubber Adhesive	Rubber Adhesive	Acrylic Adhesive	Water-Activated Adhesive
On Rough and Corrugated Paper	Fair	Excellent	Good	Excellent
On Printed Cartons	Good	Excellent	Good	Excellent
On Overstuffed Cartons	Excellent	Very Good	Good	Excellent
On Films	Very Good	Excellent	Poor	Poor
Resistance to Moisture (Dampness)	Fair	Excellent	Poor	Excellent
Resistance to Aging (Yellowing)	Good	Fair	Excellent	Excellent
Clarity	Good	Good	Excellent	Not Applicable
Resistance to UV Light	Good	Poor	Excellent	Excellent

Carton Sealing Tape

Ideal for everyday sealing and bundling jobs. Tape is 0.002″ thick (unless noted) and supplied on a cardboard spool.

Economy Polypropylene with Synthetic Rubber Adhesive— An economical tape that seals instantly. Temperature range is 20° to 140° F; apply at 40° to 140° F.

Heavy Duty Polypropylene with Rubber Adhesive— A strong sealing tape that's ideal for larger packages. Temperature range is 20° to 140° F; apply at 32° to 120° F.

Polypropylene with Acrylic Adhesive— A crystal clear tape that resists yellowing and won't break down from exposure to sunlight. Good for sealing packages for long lengths of time. Temperature range is –10° to +200° F; apply at 32° to 140° F.

Conformable PVC (Polyvinyl Chloride) with Rubber Adhesive— Stronger than polypropylene with more stretchability and good conformability. Offers greater abrasion and puncture resistance. Temp. range is –4° to +158° F; apply at room temperature.

Tape with Disposable Dispenser

Tape with Reusable Dispenser

For information about carton sealing tape, see page 3435. For tape dispensers, see pages 3433 and 3434.

Tamper-Evident Carton Sealing Tape

Peel Back

Know if high-value and confidential items have been tampered with. Tape has a 3″ ID cardboard spool.

Diagonal Stripe Tape—Diagonal stripes are printed on tape. If the tape is cut the diagonal lines cannot be realigned, revealing the package has been tampered with. Tape is white polypropylene with rubber adhesive. Choose from two messages. Stripes and lettering are blue. Temperature range is 10° to 140° F; apply at 45° to 120° F.

Peel-Back Tape—When tape is peeled back, an "OPENED" message is revealed. Tape cannot be resealed. Tape is red polystyrene with acrylic adhesive. Lettering is black. Temperature range is 0° to 158° F.

Message Tape

Tamper-Evident Tape

Excellent for carton sealing, this tape has a water-activated adhesive and fits water-activated tape dispensers on page 3434. Temperature range is 0° to 120° F (unless noted); apply at 33° to 120° F (unless noted). Supplied on a cardboard spool (unless noted). Color is brown (unless noted).

Nonreinforced Tape—For general purpose sealing jobs. Temperature range is 40° to 140° F; apply at same range.

Heavy Duty Reinforced Tape—This durable paper tape is reinforced with tri-directional fiberglass strands for extra strength when sealing cartons. Tape does not include a spool.

Pull-Tab Tape—A center strip, or pull-tab, allows you to easily open the seal with a simple pull. No need for box cutters or knives.

Message Tape—A printed "WARNING" message on the tape quickly and conveniently labels your shipment. Lettering is red.

Tamper-Evident Tape—Know if someone is tampering with your shipments. Tape has a red bottom sheet that leaves a red mark when tape is removed or if someone tries to remove it.

Kraft Paper Tape

No need for water to activate the glue, this tape has a pressure-sensitive rubber adhesive for a secure seal. It has a strong backing that resists moisture and weathering; yet it can still be torn by hand.

Temperature range is 32° to 180° F; apply at 50° to 120° F. Tape is 0.007″ thick and is supplied on a cardboard spool. Tensile strength is 39 lbs./in. wd. Color is tan.

3M Scotch Tape

Ideal for mending, holding, and splicing, this easy to use tape should be applied at room temperature. It is transparent and 0.002″ thick. 1″ ID spools are plastic; 3″ ID spools are cardboard.

#600 Scotch tape has an acrylic adhesive for sealing as well as light duty packaging applications. Treated for easy release, which also ensures smooth unwinding. It's stain, sunlight, and moisture resistant.

#610 Scotch cellophane tape resists high temperatures and has a rubber adhesive. It also has excellent holding properties.

#810 Scotch Magic tape has acrylic adhesive that becomes clear as glass upon application. Excellent for label protection, mending, and splicing. The ink-receptive surface allows you to write on it.

Filament Tape

Reinforced for strength, this tape is great for packaging, bundling, and strapping. It has high tensile strength and excellent abrasion and moisture resistance. Tape is polypropylene with fiberglass filaments (unless noted) and has a rubber adhesive. Temperature range is –30° to +120° F; apply at +40° to +95° F (unless noted). Supplied on a cardboard spool.

Economy

Has filaments along the length. Good for light duty applications. Tape is 0.004″ thick and transparent.

Polypropylene Strapping Tape

Made from tensilized polypropylene film (without fiberglass filaments), this tape has high impact strength that allows "give and take" without breaking. It will stretch before splitting, making it ideal for banding, bundling, and palleting. Temperature range is 32° to 150° F; apply at 40° to 120° F. Supplied on a cardboard spool. Color is ivory.

***Standard Duty*—**Has an acrylic adhesive. Tape thickness is 0.004″.

***Heavy Duty*—**High-tack rubber adhesive makes it good for holding and securing appliances, furniture, and office equipment for transport. It snaps back to hold shifting loads. Tape thickness is 0.005″.

Label Protection Tape and Dispensers

Protect labels from moisture, and chemicals with this clear tape. Made of UPVC (unplasticized polyvinyl chloride) with a rubber adhesive. Temperature range is 14° to 212° F; apply at 41° to 104° F. Tape is 0.002″ thick and is supplied on a cardboard spool. ***Tape dispenser*** can also be used with carton sealing tape. Do not use with duct tape. Tape is not included.

Dispenser with Tape (Each Sold Separately)

Super-Bond Tape for Plastics

This transparent polyester tape grips super-slick surfaces such as plastics and nylon. Great for holding polyethylene barrel liners in place as well as splicing polyester conveyor belts and acetate transparencies. It has a high-adhesion rubber adhesive and a total tape thickness of 0.004″. Temperature range is 40° to 200° F; apply at 50° to 70° F. Tape is supplied on a cardboard spool.

Wd.	Lg., yds.	Spool ID	Roll Dia.		Roll

Poly-Bag Sealing Tape and Dispenser

This UPVC (unplasticized polyvinyl chloride) tape with rubber adhesive is perfect for sealing, bundling, and produce packaging. Tape is 0.002″ thick and supplied on a cardboard spool. Maximum temperature is 176° F; apply at 60° to 80° F.

Sealing plastic bags is quick and easy with this tape and dispenser. Simply twist end of plastic bag and insert into dispenser for a tight seal. Has a bag-end trimmer to give you consistent results.

Polyester Electrical Insulation Tape

Great for shielding and insulating electrical connections. Thin yet durable, this tape is made of an electrical-grade polyester film and is conformable as well as chemical, abrasion, and wear resistant. It is 0.0025″ thick (film is 0.001″ and adhesive is 0.0015″) and has a 266° F insulation class rating. Dielectric strength (the ability to withstand electrical voltage without rupture) is 5,000 volts and tensile strength is 25 lbs./in. width. Tape is supplied on a plastic spool. UL listed.

***Standard*—**Tape has better adhesion than the flame-retardant tape and is noncorrosive. It's yellow with a rubber adhesive. Temperature range is 0° to 325° F.

***Flame Retardant*—**Tape is white, has an acrylic adhesive, and is solvent and oil resistant. Temperature range is –20° to +325° F.

3M Scotch Brand Electrical Tape

Vinyl Electrical Tape

Ideal for:
- Holding and insulating electrical connections
- Insulating wire and cable splices up to 600 volts
- Jacketing and identifying in high-voltage cable splices and terminations
- Splicing fixture wire up to 600 volts
- Harnessing wires and cables

Features:
- UL Listed
- CSA certified
- Flame retardant
- Moisture resistant
- Weather resistant
- UV resistant
- Acid and alkali resistant
- Abrasion resistant
- Corrosion resistant
- Cardboard spool

Scotch Super 33+ **—** An excellent super-stretchy, all-weather tape. Can be applied at temperatures as low as 0° F and easily conforms to irregular surfaces. Meets ASTM D3005 Type I requirements.

Scotch Super 88 **—** This heavy duty tape provides fast buildup and a strong, moisture-tight seal. Ideal for cold-weather applications. Meets ASTM D3005 Type II and MIL-I-24391C requirements.

Scotch 22 Heavy Duty **—** This extra-thick tape has high dielectric and mechanical strength. It also provides quick buildup during application. Meets ASTM D2301 Type II requirements.

Scotch 35 Colored **—** Use indoors and out for identification as well as to keep track of circuits, piping systems, motor leads, and splices.

♦ Meets ASTM D1000. *Note:* Dielectric strength is the ability to withstand electrical voltage without rupture.
★ You may buy any quantity you need; full-package quantities are listed for your convenience.

Splicing and Insulating Tape

All tape is supplied on a cardboard spool.

Scotch 23 and 130C Rubber Splicing Tape **—** Highly conformable, self-fusing, EPR-based (ethylene propylene rubber) tape can be used as insulation for low-voltage applications, as well as for splices up to 69,000 volts. Meet ASTM D4388 Type I, II, and III requirements.

Scotch 23 has a peel-off liner; *Scotch 130C* has no liner.

Scotch 27 (Class B) and 69 (Class H) Glass-Cloth Electrical Tape **—** Tape is corrosion and puncture resistant and won't shrink, rot, or burn. Made of a woven glass base. Adhesive is thermosetting so it becomes stronger at high temperatures. Tape has no liner. Use indoors only.

Scotch 27 (Class B) provides heat-stable insulation for "hot spot" applications such as furnace and oven controls, motor leads, and switches.

Scotch 69 (Class H) reinforces insulation in heavy load and high heat applications. Meets MIL-I-19166C requirements.

Scotch 70 Self-Fusing Silicone Rubber Electrical Tape **—** This silicone rubber tape has no adhesive—it fuses instantly to surfaces to protect high-voltage cables and insulate Class H high-temperature applications. Tape is arc resistant and has a peel-off liner.

Scotch 77 Fire Retardant Electric-Arc Proofing Tape **—** This tape expands in a fire to protect cables from flames and heat. Tape easily conforms to irregular surfaces. Tape does not have an adhesive—use as cable wrap with Scotch 69 glass-cloth electrical tape (described above and sold separately below).

Scotch 2200, 2210, 2228, and 2229 Mastic Tape and Pads **—** Use to pad, insulate, and seal out moisture and environmental contaminants in electrical connections. All have a peel-off liner.

Scotch 2210 Vinyl Mastic Tape and *2200 Pads* are for general purpose sealing and insulating. Consist of an all-weather grade PVC film with a rubber-based mastic. Have excellent resistance to abrasion, alkalies, acids, corrosion, and UV rays. Scotch 2200 pads come 10 per box.

Scotch 2228 Rubber Mastic Tape is suitable for use with cable, wire, and motor lead connections up to 1,000 volts and with bus bar connections up to 35,000 volts. Consists of a conformable rubber backing with a rubber-based mastic.

Scotch 2229 Seal Mastic Tape and Pads consist of a rubber-based mastic. They can be molded easily around irregular shapes and are UV and chemical resistant. Pads come 10 per box

Scotch 2520 Varnished Cambric Tape **—** Use this cotton tape as insulation for bus bars, service drop connectors, and temporary splices. Has excellent moisture and puncture resistance, is coated with a high-grade electrical insulating varnish, and has an acrylic adhesive with no liner.

Scotchfil Electrical Insulating Putty Tape **—** Noncorrosive electrical-grade putty in tape form. Use for applications up to 600 volts. Also suitable for rounding out high-voltage (up to 2,300 volts) connections, smoothing bus bar irregularities, and as a moisture seal for ground-wire exits in high-voltage splices. Has a peel-off liner.

♦ Meets ASTM D1000. *Note:* Dielectric strength is the ability to withstand electrical voltage without rupture. ✓ Meets ASTM D1000 requirements.
■ Maximum temperature is not rated. ♣ Meets ASTM D4325 requirements, not D1000. ♠ Meets ASTM D295 requirements, not D1000.
▲ 10 pads per box. Also available in less than full-box quantities; prices 25% higher.

Economy Electrical Tape

Insulate wire and cable splices up to 600 volts with this economical electrical tape. It's also great for harnessing wire and cable and as jacketing for high-voltage cable splices and repairs. Tape is PVC (polyvinyl chloride) with a rubber adhesive and has excellent resistance to moisture, weather, abrasion, acids, alkalies, and copper corrosion.

Tape thickness is 0.007″. Dielectric strength (the ability to withstand electrical voltage without rupture) is 8,750 volts and tensile strength is 18 lbs./in. width. Temperature range is 32° to 176° F. Supplied on a cardboard spool. UL listed.

Self-Fusing Tape

No need for adhesive, this tape fuses to itself for a permanent seal. Simply apply tape to object—it stretches to fit virtually any form.

All-Weather EPR Tape—Insulates and seals above and below ground, in hot and cold weather, and in wet and dry environments. Made of EPR (ethylene propylene rubber), tape is self-adhering—it has no adhesive, but fuses to itself within minutes of application and can't be unwrapped. Perfect for sealing wires, joints, pipes, and hose as well as for insulating battery terminals. Temperature range is –40° to +212° F; apply at +32° to +105° F. Tape is supplied on a plastic spool and has a peel-off liner.

7682A65 has 800% elongation (percent of stretch) and the color is black. 7682A66 has 600% elongation and the color is white.

High-Temperature Silicone Rubber Tape—Ideal for high-temperature applications such as electrical coil insulation, splices, cable harnesses, powder coating, masking applications, and bus bar insulation. Also useful as a substitute for heat-shrink tube coverings. Tensile strength is 700 psi and elongation (percent of stretch) is 300%. Temperature range is –76° to +392° F; apply at +70° to +100° F (unless noted). Tape has a peel-off liner and is supplied on a cardboard spool. **To Order:** Please specify color: black, clear, gray, or red.

Rectangular is a flat tape with uniform thickness. Commonly used as an electrical insulator. Meet MIL-A-A-59163 Type I requirements (unless noted). *Triangular* is thicker in the middle and tapers at each edge. Middle also has a ridge that acts as a guide to ensure a smooth wrap. Meet MIL-A-A-59163 Type II requirements.

Clean-Release Paper Tape

Also known as drafting tape, this tape is great for temporary holding jobs where easy release without marring or staining is required. Use to mount drawings, tracings, and blueprints.

Tape consists of a cream-colored crepe paper film with a rubber adhesive that removes without leaving residue. Total tape thickness is 0.007″. Temperature range is 32° to 200° F. Supplied on a cardboard spool.

Black-Cloth Electrical Tape

Also known as friction tape, this traditional black cotton electrician's tape provides an abrasion-resistant shield for overwrapping low-voltage splices. The rubber adhesive applied to both sides of this tape works as a nonslip surface when applied to tool handles.

Tape thickness is 0.015″. Dielectric strength (the ability to withstand electrical voltage without rupture) is 1,200 volts and tensile strength is 40 lbs./in. width. Temperature range is –40° to +266° F; apply at +32° to +104° F. Supplied on a cardboard spool. Meets ASTM D69 and D4514 requirements.

Liquid Electrical "Tape"

Vinyl Liquid Electrical Tape

Apply this liquid for a skin-tight protective coating that insulates and resists moisture, acids, and corrosion. Adheres to metal, plastic, vinyl, rubber, and composite surfaces. For indoor or outdoor use.

Vinyl liquid is for use on electrical connections and terminals. Dries to the touch in approximately five minutes and reaches full strength in 24 hours. Temperature range is –50° to +250° F; apply at +40° to +100° F. Dielectric strength (the ability to withstand electrical voltage without rupture) is 1,778 volts at 0.001″ thickness. Top has a convenient applicator brush. **To Order:** Please specify color: black, clear, green, red, or white.

Spray-on liquid is rubber based. Use on electrical connections and terminals. Allow 30 minutes between coats and 4 hours to dry completely. Temperature range is –30° to +200° F; apply at +68° to +72° F. Dielectric strength (the ability to withstand electrical voltage without rupture) is 1,400 volts at 0.001″ thickness. Color is black.

3M Scotchrap #51 Corrosion-Protection Tape

Perfect for use in electrical applications, this black tape provides all-weather corrosion protection for your pipes, conduit, and fittings. Tape is resistant to abrasion, salt water, salt, acids, alkalies, common chemicals and vapors, weathering, and sunlight. Plus, it will not puncture or tear.

Made of PVC (polyvinyl chloride) with a high-tack adhesive. Has a dielectric strength (the ability to withstand electrical voltage without rupture) of 20,000 volts and excellent insulating properties.

Also for use with Scotchfil electrical insulating putty tape (75695A67 on page 3438). Tape is 0.020″ thick. Temperature range is –55° to +175° F; apply at +10° to +150° F. Meets Fed. Spec. L-T-1512A, Type 2 for corrosion protection. Supplied on a cardboard spool.

Colored Masking Tape

Seven colors to choose from. Tape is good for light bundling and packing; use on smooth surfaces. Made of crepe paper with a rubber and resin adhesive. Tape is 0.006″ thick and is supplied on a cardboard spool. Temperature range is 40° to 150° F; apply at 50° to 90° F.

To Order: Please specify color: black, light blue, light green, orange, red, white, or yellow.

Masking Tape

All tape is crepe paper with a rubber adhesive (unless noted). Supplied on a cardboard spool (unless noted).

General purpose is for masking as well as bundling and holding. Withstands temperatures up to 150° F; apply at 50° to 150° F.

3M #234 Scotch General Purpose withstands temperatures up to 250° F; apply at 50° to 90° F.

3M #232 Scotch High Performance is for masking, bundling, and holding. Withstands temperatures up to 250° F; apply at 50° to 90° F.

Fine-line polypropylene stretches easily for smooth curves and provides excellent control for painting precise lines. Ideal for use during pinstriping, this polypropylene tape resists solvents, moisture, and paint flaking and bleeding. Withstands temperatures up to 250° F; apply at 50° to 90° F. Supplied on a plastic spool.

Long-life blue removes cleanly with no adhesive residue, even after exposure to direct sunlight over several days. *7-day exposure* tape has a synthetic rubber adhesive and withstands temperatures up to 200° F; apply at 50° to 150° F. *60-day exposure* tape has an acrylic adhesive and withstands temperatures up to 120° F; apply at 50° to 100° F.

Performance plus green provides clean edges in most paint masking. Provides instant adhesion and clean removal from difficult surfaces such as EPDM rubber moldings and painted steel. Withstands temperatures up to 250° F; apply at 60° to 90° F.

Super-sharp paint line has a paint-blocking treatment that forms a barrier along the edges of the tape to prevent latex paint from leaking under the tape. Exposure time is 14 days outside and 21 days inside. Withstands temperatures up to 200° F; apply above 50° F.

High-temperature withstands higher temperatures than other masking tapes and offers excellent resistance to bleeding of paints and thinners. Withstands temperatures up to 310° F; apply at 40° to 120° F.

For information about masking tape, see page 3440.

Easy-Paint Masking Tape

Prevent bleed-through of most paints, stains, and varnishes with this tape, which leaves a straight, clean line when removed after painting. Made of paper with an acrylic adhesive. Not rated for temperature.

Wall and trim tape has a ¾″ wide strip of adhesive along the top edge for masking interior primed wall and trim surfaces. Tape is 0.004″ thick. Color is tan. ***Smooth surface*** tape releases easily, so it's ideal for smooth, delicate surfaces such as wallpaper. Tape is 0.005″ thick. Color is white. ***Rough surface*** tape has extra holding power to stick to rough or dusty surfaces. Tape is 0.0049″ thick. Color is blue.

All-in-One Paint Masking System

System consists of a clear polyethylene film with an acrylic adhesive and a hand-held dispenser with cutting blade. Unroll, apply to surface being masked, cut to desired length, and unfold the masking film. Film acts like a plastic drop cloth, clinging to surface to completely seal off the covered area. It's antistatic and lint-free, so there's no paper-fiber contamination. Film withstands temperatures up to 230° F and is 0.0065″ thick.

Masking Tape Discs

Ideal for masking during spray painting, as well as for dust protection and temporary hole covering. These crepe-paper discs have a rubber adhesive. Withstand temperatures up to 325° F; apply above 32° F. Discs are 0.0075″ thick. Color is tan. ***Rolls*** have a 4″ diameter and are supplied on a cardboard spool with a 3″ ID.

3M Vinyl Masking Tape #471

Meeting OSHA requirements for identifying hazardous areas, fire lanes, and safety equipment, this conformable tape creates a tight seal and an even bond on irregular shapes and surfaces. Great for fine-line paint masking, surface protection, and aisle marking.

Tape is 0.005″ thick. Temperature range is 40° to 170° F; apply at 60° to 85° F. Tape is supplied on a plastic spool except 3″ wide tape, which is supplied on a cardboard spool.

To Order: Please specify color (unless noted): black, blue, green, orange, red, white, or yellow.

High-Temperature Polyester Masking Tape and Discs

An economical alternative to polyimide tape, polyester tape and discs handle high-temperature masking. They remove easily without residue and resist corrosive chemicals, tearing, and breaking. Tape and discs are 0.0033″ thick and have a silicone adhesive. Temperature range is –22° to +266° F; withstand temperatures up to 400° F for 20 minutes. Apply at room temperature. Supplied on a plastic spool with a 3″ ID. Tape roll diameter is 4 1/16″; disc roll diameter is 3¼″. Color is green.

Abrasion-Resistant Silicone/Glass-Cloth Masking Tape

The combination of a silicone rubber/glass-cloth film and a silicone adhesive gives this tape high abrasion resistance with a wide temperature range. It's tough enough to use during grit blasting and plasma flame spraying. Tape is 0.011″ thick and includes an easy-to-remove yellow, dimpled liner. Temp. range is –100° to +500° F; apply within same range. Tape is supplied on a cardboard spool with a 3″ ID. Color is white.

Chemical-Resistant Vinyl Masking Tape

Also known as plating tape, this yellow vinyl tape is chemical resistant, so it won't contaminate plating baths. Supplied on a cardboard spool.

Nonadhesive tape adheres to itself for a leakproof bond. Great for plating. Temp. range is 15° to 200° F; apply at 60° to 80° F. Tape is 0.004″ thick. Spool has 3″ ID. ***Rubber-adhesive tape*** is an excellent straight-edge mask for anodizing and plating. Temp. range is 32° to 176° F; apply at 60° to 80° F. Tape is 0.007″ thick. Spool has 1½″ ID.

Light-Blocking Black Masking Tape

For optimal light-blocking this black crepe-paper tape is pinhole free. Often used in photo-processing labs, it's perfect for masking out unwanted portions of transparencies, repairing camera bellows, patching holes, and sealing out light. Tape is 0.006″ thick with a rubber adhesive. Temp. range is 45° to 100° F; apply at 65° to 90° F.

Masking Tape Applicator

Tired of masking areas by hand? Let this applicator guide the tape for a straighter line; dispenses masking tape up to 2″ wide. Ideal for use on trim, painted walls and woodwork, and glass. For tape with a 3″ spool ID. Tape not included.

2470A32 ..... $15.91

Easy-Tear Polyethylene Surface-Protection Tape

Tape has a serrated edge for easy tearing—even when you're wearing gloves. Made of a polyethylene film, tape is waterproof and conformable. Ideal for surface-protection applications.

Tape is 0.0075″ thick and has a rubber adhesive. Temperature range is 32° to 160° F; apply at 65° to 160° F. Supplied on a cardboard spool.

For information about masking tape, see page 3440.

Super-Thin Polyester Surface-Protection Tape

Only 0.0019″ thick, yet this tape has excellent strength and high chemical resistance. Adhesive is acrylic. Temp. range is –60° to +300°F; apply at +50° to +100°F. Tensile strength is 28 lbs./in. width. *5-yard rolls* are supplied on a cardboard spool.

Metalized tape is for decorative edging, striping, and die cutting. ***Solid red*** tape is used for splicing movie film, reinforcing film edges, building up low areas on cylinders and rubber plates, and marking defects.

Heat-Resistant Kapton® Polyimide Tape

Disc *Square* *Donut*

Great for wrapping and splicing wires and cables as well as masking gold parts during wave soldering of printed circuit boards. Tape has high heat resistance and tensile strength, good solvent resistance, and excellent dielectric strength (the ability to withstand electrical voltage without rupture). Adhesive is 0.0015″ thick. Apply at room temperature. Color is amber. Tensile strength is 30 lbs./in. width (unless noted). Meets MIL-P-46112B (unless noted). *5-yard rolls* are supplied on a plastic spool with a 1 1/2″ ID; *36-yard rolls* are supplied on a plastic spool with a 3″ ID.

Tape with Silicone Adhesive— Complies with UL 510 for flame retardance. Ideal for high-temperature applications. Temperature range is –100° to +500°F. *0.0025″ thick* tape has a 0.001″ thick film and a dielectric strength of 6,500 volts. *0.0035″ thick* tape has a 0.002″ thick film and a dielectric strength of 10,000 volts.

Tape with Acrylic Adhesive— The choice when silicone adhesive can't be used and high temperature resistance is not an issue. Has a 0.001″ thick film. Temp. range is –20° to +350°F. Dielectric strength is 7,000 volts.

Discs, Squares, and ***Donuts—*** Easily mask small areas and cover openings with these discs, squares, and donuts. Total tape thickness is 0.0025″ (0.001″ thick film with 0.0015″ of silicone adhesive). Temp. range is –100° to +500°F. Dielectric strength is 6,500 volts. *Discs on rolls* are supplied on a cardboard spool with a 3″ ID. *Discs on sheets, squares* and *donuts* do not include spool.

Chemical-Resistant Surlyn Surface-Protection Tape

Resists breaking down in even the harshest chemical environments. Made of Surlyn film, this tape performs well at low temperatures. It's conformable, abrasion resistant, and has high clarity, making it excellent for use as an invisible protective barrier. It's also heat sealable, making lamination easy. Tape is 0.012″ thick and has an acrylic adhesive and a peel-off liner. Temp. range is –40° to +180°F; apply at +50° to +120°F. Supplied on a cardboard spool. Color is clear.

Abrasion-Resistant Polyurethane Surface-Protection Tape

This exceptionally tough, conformable tape protects surfaces from chipping, scratching, and abrasion. Designed primarily for indoor use, it will adhere to most metal and plastic surfaces. It has an acrylic adhesive and a peel-off liner. Tape is 0.0095″ thick. Temperature range is –40° to +250°F; apply at +50° to +120°F. Tape is supplied on a cardboard spool. Color is black.

UV-Resistant Polyethylene Surface-Protection Tape

Temporarily protect surfaces exposed to sunlight during installation, manufacturing, storage, and transit with this low-tack tape. Use on glass and smooth metals such as polished aluminum, annealed stainless steel, painted metals, and laminates. Ideal for outdoor applications. Can remain on for up to six months.

Tape is 0.003″ thick and has an acrylic adhesive. Apply at 55° to 90°F; not rated for minimum or maximum temperatures. Color is clear.

Clean-Release Polyethylene Surface-Protection Tape

This clean-release film tape leaves no residue, so it's perfect for temporarily protecting highly polished surfaces from scratching and marring. Use on metals, wood, plastics, and LCD screens. Tape is 0.003″ thick and has an acrylic adhesive. Apply at 55° to 90°F; not rated for other temperatures. Supplied on a cardboard spool with a 3″ ID. Color is clear.

Tape— Roll diameter is 7″.

Low-Static Polyimide Tape

Minimize electrostatic discharge (ESD) that can cause circuit board degradation. A unique coating on this film allows it to generate low ESD when unwinding from the roll (150 volts) as well as upon removal from printed circuit boards (50 volts). Excellent for use as a masking tape in clean rooms where high ESD is a concern. *Note:* ESD values are based on an ESD-controlled environment at 68°F and 50% relative humidity.

Tape is 0.0026″ thick (0.001″ thick film with 0.0016″ silicone adhesive). Temperature range is –40° to +356°F; apply at room temperature. Dielectric strength (the ability to withstand electrical voltage without rupture) is 6,000 volts. Supplied on a plastic spool. Color is amber.

About Slick Surface Tape

When choosing a slick surface tape, consider your application, how well the tape allows items to slide on it (low coefficient of friction), what the tape must withstand, and the adhesive. Silicone adhesives withstand extreme temperatures and release cleanly. Acrylic adhesives withstand moderate temperatures and leave some residue when removed, but are more chemical resistant and have a higher tack. The chart below will help you choose the tape that best meets your needs. See specific tapes for exact specifications.

Tape Made with Teflon® PTFE

This PTFE (polytetrafluoroethylene) tape has good dielectric strength (the ability to withstand electrical voltage without rupture) and tensile strength combined with stretchability. The result is a tougher, more conformable tape than polyimide tape. Great as a high-performance electrical tape and as an insulation tape. It's also ideal for masking and wrapping laminating rollers to prevent polyethylene build-up. *Note:* This is not a pipe thread tape. For PTFE pipe thread tape, see page 3415.

Tape—Supplied on a cardboard spool with a 3″ ID (unless noted). Tape ***with silicone adhesive*** has a temperature range of –100° to +500° F. Color is brownish gray. Tape ***with acrylic adhesive*** has a temperature range of 0° to +120° F. Color is gray.

0.0035″ thick tape has 0.002″ thick film. Dielectric strength is 9,000 volts. *0.0045″ thick* tape has 0.003″ thick film. Dielectric strength is 11,000 volts. *0.0115″ thick* tape has 0.01″ thick film. Dielectric strength is 18,000 volts. *0.022″ thick* tape has 0.02″ thick film. Dielectric strength is 16,000 volts. *0.032″ thick* tape has 0.03″ thick film. Dielectric strength is 19,500 volts. *0.062″ thick* tape has 0.06″ thick film. Dielectric strength is 33,000 volts.

Discs, Squares, and ***Donuts***—They're 0.0035″ thick and consist of 0.002″ thick film with 0.0015″ of silicone adhesive. Temperature range is –100° to +500° F. Dielectric strength is 9,000 volts. Do not include a spool. Color is brownish gray.

For information about slick surface tape, see page 3443.

Conformable Tape Made with Teflon® PTFE

This PTFE (polytetrafluoroethylene) tape, also known as skived tape, has a low-friction surface with high chemical resistance. It is more stretchable and conforms better to uneven surfaces than the PTFE tape on page 3443. Use as a lining on molds, guide rails, and chutes, as well as for wrapping airframe wire harnesses and covering the heat-sealing surface on impulse sealers and bag sealers. Tape has a silicone adhesive and a white or yellow peel-off liner. Temperature range is –100° to +500° F. Supplied on a cardboard spool with a 3″ ID.

Note: This is not a pipe thread tape. For PTFE pipe thread tape, see page 3415.

Strong and Slippery UHMW Polyethylene Tape with Super-Bond Adhesive

All the benefits of strong and slippery UHMW (ultra-high molecular weight) polyethylene tape on this page, plus a super-high bond adhesive make this tape perfect for difficult-to-bond surfaces such as powder-coated, plastic, foam, and metal surfaces. Adhesive is a high-strength, chemical-resistant acrylic. Temperature range is 0° to 200° F; apply at 70° to 100° F. Supplied on a cardboard spool. Color is translucent.

0.012″ thick tape has a 0.01″ thick film with 0.002″ adhesive.
0.022″ thick tape has a 0.02″ thick film with 0.002″ adhesive.

Shock-Absorbing UHMW Polyethylene Tape

Get the high abrasion resistance and nonstick properties of UHMW (ultra-high molecular weight) polyethylene combined with the cushioning of polyurethane foam in this easily applied tape. Excellent for shock absorbing and noise dampening in chutes, bins, and similar delivery systems. It's also great for reducing friction in low-speed conveyors. The nonstick surface cleans easily and resists tearing, gouging, and most chemicals.

Tape is 0.067″ thick (0.005″ thick UHMW polyethylene film laminated to 0.0605″ thick polyurethane foam and coated with 0.0015″ of acrylic adhesive). Includes peel-off polyethylene liner. Temperature range is –40° to +200° F.

Strong and Slippery UHMW Polyethylene Tape

Provides a nonstick, low-friction surface similar to PTFE (polytetrafluoroethylene) tape but with higher abrasion and impact resistance. Ideal for chutes, packaging lines, slides, and anywhere high-pressure sliding contact occurs. Also eliminates squeaks and rattles caused by adjacent parts movement. Tape has a UHMW (ultra-high molecular weight) polyethylene film and 0.0015″ of acrylic adhesive. Color is translucent. 0.0045″ thick, 0.0065″ thick, and 0.0115″ thick tape has a temperature range of –40° to +225° F and includes a peel-off polyethylene liner. Temperature range for 0.0215″ thick, 0.0325″ thick, and 0.0615″ thick tape is 0° to 120° F.

Tape—*0.0045″ thick* tape has a 0.003″ thick film. *0.0065″ thick* tape has a 0.005″ thick film. *0.0115″ thick* tape has a 0.010″ thick film. *0.0215″ thick* tape has a 0.02″ thick film. *0.0325″ thick* tape has a 0.03″ thick film. *0.0615″ thick* tape has a 0.06″ thick film.

Discs, Squares, and ***Donuts—***Tape is 0.012″ thick (0.01″ thick film with 0.002″ of acrylic adhesive). Include a white peel-off kraft-paper liner. Do not include a spool.

Nonstick Surface-Gripping Tape

Also known as roller wrap, this tape has a silicone coating to provide a surface that grabs but doesn't stick. Perfect for pulling flexible materials over rollers during coating, laminating, printing, and paper converting.

Rayon Cloth—Has a rubber adhesive and a peel-off liner. Withstands temperatures up to 212° F; apply at room temperature to 150° F. *Smooth* tape provides high surface contact and friction. Total tape thickness is 0.016″. *Embossed* tape has a total tape thickness of 0.025″.

Fiberglass Cloth—Conforms to surfaces better than rayon cloth tape and is thinner to minimize changes in roller diameter and web speed. It has a woven surface that resists adhesives and inks. Tape has a rubber adhesive to provide a strong bond to rollers, yet allows repositioning and removal without leaving residue. Total tape thickness is 0.0076″ and consists of 0.0046″ cloth and 0.003″ of adhesive. Withstands temperatures up to 265° F; apply at temperatures above 40° F.

For information about slick surface tape, see page 3443.

Antistatic UHMW Polyethylene Tape

Similar to the Strong and Slippery UHMW (ultra-high molecular weight) Polyethylene Tape on page 3444, but with antistatic properties. Use when a sliding, nonstick surface is needed and when static discharge is a concern. Great as a liner on chutes and as a wear strip in material handling systems for eliminating rattles and squeaks. Has 0.005″ thick rubber adhesive. Temperature range is –40° to +175° F; apply at +50° to +120° F. Color is black.

Wear-Resistant Antifriction Rulon Tape

Often referred to as bearing tape, this PTFE (polytetrafluoroethylene) tape has a self-lubricating surface, resulting in a low-friction tape with higher abrasion and wear resistance than regular PTFE tape. Great for applications requiring high temperature and chemical resistance. Ideal for use on bearing liners, chutes, and guide rail coverings.

Tape is 0.010″ thick and consists of 0.008″ thick film with 0.002″ of silicone adhesive. Temperature range is –100° to +500° F. Tape is supplied on a cardboard spool. Color is dull red.

Super Wear-Resistant Antifriction PEEK Tape

Excellent friction, wear, and insulating properties combined with good chemical resistance make this tape the ideal choice for use on sliding bearing surfaces, abrasion-resistant wire wraps, and in high-heat applications. Use on steel, ceramic, and glass. Color is tan.

Acrylic adhesive tape resists high humidity and chemicals. Total tape thickness includes 0.002″ of adhesive. Temp. range is –40° to +275° F.

Silicone adhesive tape provides high-heat protection. Total tape thickness includes 0.004″ of adhesive. Temp. range is –20° to +400° F.

Fiberglass Cloth Tape—Adhesive on Both Sides

Use as a masking tape and as an underwrap when used with Abrasion-Resistant Silicone/Glass-Cloth Masking Tape (page 3441) and High-Temperature High-Strength Reinforced Aluminum Foil Tape (page 3448). Tape has excellent thermal and abrasion resistance, so it's ideal for thermal spray applications such as grit blasting and plasma spraying. Tape is 0.007″ thick (0.0045″ thick fiberglass cloth with 0.00125″ of silicone adhesive on each side). Includes a peel-off paper liner. Temperature range is –100° to +500° F.

Fiberglass Cloth Insulating Tape

With the ability to absorb insulating varnish, this durable woven fiberglass tape is an excellent choice for electrical insulating. It has high tensile strength and very good temperature and abrasion resistance. It's also conformable and flexible. Use as an overwrap on motor rewinds, a protective wrap for wire and cables, and as a high-temperature masking tape for welding stainless steel. Tape is 0.007″ thick and consists of a 0.0045″ fiberglass cloth with 0.0025″ of adhesive. Tensile strength is 150 lbs./in. width. Tape is supplied on a cardboard spool. Color is white.

Acrylic adhesive tape has strong resistance to oil. Dielectric strength (the ability to withstand electrical voltage without rupture) is 3,000 volts. Temperature range is –20° to +350° F.

Silicone adhesive tape's dielectric strength is 4,500 volts. Temperature range is –100° to +500° F.

Abrasion-Resistant Fiberglass Tape Coated with Teflon® PTFE

This tape has better abrasion resistance than Fiberglass Cloth Insulating Tape on this page. Tape is nonstick PTFE (polytetrafluoroethylene) combined with fiberglass for resistance to high temperatures and chemicals. Ideal for use as a release surface on heat sealers and on blister-formation and form-fill seal equipment, as well as a low-friction release surface liner for conveyors. Also great as a mold protection tape.

Temperature range is –100° to +500° F. Tape has a silicone adhesive and is supplied on a cardboard spool.

Nonconductive— Does not conduct electrical current. Color is tan.

Semiconductive— Tape is designed to resist static buildup and is helpful in discharging minor amounts of surface static electricity. Color is black with a yellow or white liner.

♣ Tape is 0.012″ thick (0.01″ thick film with 0.002″ of adhesive).

Long-Life Fiberglass Tape Laminated with Teflon® PTFE

Fiberglass is laminated with PTFE (polytetrafluoroethylene) so it has a longer performance life as well as more conformability and flexibility than Abrasion-Resistant Fiberglass Tape Coated with Teflon® PTFE on this page. The lamination also eliminates thin spots that can lead to premature tape failure.

Temperature range is –100° to +550° F. Tape has a silicone adhesive and is supplied on a cardboard spool. Color is reddish brown.

For information about slick surface tape, see page 3443.

Optically Clear Tape Made with Teflon® FEP

This FEP (fluorinated ethylene propylene) tape has optical clarity coupled with good chemical and temperature resistance. Use as a clear, protective covering for bar code sensors and other delicate printed surfaces. It also can be used as a cable wrap and as primary insulation on motors, coils, and transformers.

Tape is 0.0035″ thick and consists of a 0.002″ thick film with 0.0015″ of silicone adhesive. Temperature range is –100° to +400° F. Dielectric strength (the ability to withstand electrical voltage without rupture) is 9,000 volts. Tape is supplied on a cardboard spool with a 3″ ID.

Protective-Overlay FEP Tape

Put a protective, nonstick covering that's easy to clean on virtually any surface. This FEP (fluorinated ethylene propylene) tape resists corrosive chemicals, moisture, and weather. Just cut to size with a knife or scissors, peel off the liner, and apply.

This all-purpose overlay is composed of a 0.001″ thick fluoropolymer film laminated to 0.008″ thick vinyl film; fluoropolymer film is FDA compliant for food contact. Also has 0.0003″ of acrylic adhesive, for a total thickness of 0.0093″.

Temperature range is –50° to +230° F; apply at +45° to +230° F. Supplied on a cardboard spool. Color is white.

Moisture-Resistant Acetal Copolymer Tape

Resisting moisture, chemicals, fuels (even oxygenated fuels and gasoline/ethanol blends), wear, and creep, this tape easily handles tough jobs. Total tape thickness includes 0.002″ of acrylic adhesive combined with either a 0.003″, 0.005″, 0.01″, or 0.02″ thick backing. Maximum temperature is 300° F. Tape has a peel-off liner and a cardboard spool. Color is clear.

Metalized-Fabric EMI-Shielding Tape

This puncture-resistant tape has a highly conductive acrylic adhesive making it ideal for EMI (electromagnetic interference) shielding of cables for satellites, electronic vehicles, and robotics. Also great for disc drives, modems, and automotive electronics. Tape is a polyester fabric woven with nickel/copper and is more conformable than copper foil tape. Shielding effectiveness is 1 MHz/102 dB or 500 MHz/90 dB. Surface resistivity is 25 milli-ohms/sq. in.

Tape is 0.004″ thick and consists of a 0.003″ thick backing with 0.001″ adhesive and also has a 0.006″ thick peel-off liner. Temperature range is –40° to +250° F; apply at temperatures above +50° F. Supplied on a plastic spool. Color is sand.

Cut-Resistant Antistatic High-Temperature Tape

Extra-strength para-aramid (comparable to Kevlar) cloth is fused with antistatic PTFE (polytetrafluoroethylene) for a cut-resistant tape that works great in high-temperature wrapping applications where static could be a problem. This tape is also flexible, chemical resistant, and UV stable so it can withstand harsh environments that normally wear out standard fiberglass cloth tape. Surface resistivity is less than 10^6 ohms/sq. in. Tape is 0.007″ thick and consists of a 0.005″ thick backing with 0.002″ of silicone adhesive. Temperature range is –100° to +500° F. Supplied on a cardboard spool. Color is black.

Thermally Conductive Tape—Adhesive on Both Sides

With high thermal conductivity, exceptional bonding properties, and adhesive on both sides, this tape eliminates the need for thermal grease and mechanical fasteners. Tape has a high-bond acrylic adhesive with titanium diboride on both sides of an aluminum film for an effective thermal interface between electronic components and heat sinks. Use to attach components to vertical heat sinks and to metal chassis walls in place of clips, screws, and other mechanical fasteners without the need for additional thermal compounds. Thermal conductivity is 1.4 W/mK. Thermal impedance is 0.25° C in.^{2}/W.

Tape is 0.009″ thick. Temperature range is –40° to +302° F. Supplied on a cardboard spool. Color is gray.

Thermally Conductive Silicone-Coated Kapton® Polyimide Tape

Ideal for use as a thermally conductive dielectric barrier and to fill voids where thermal transfer and electrical isolation is important. This Kapton® polyimide tape is coated in silicone rubber for excellent electrical isolation and high dielectric performance. The silicone layer also provides a nonstick surface for heat transfer and easy disassembly. Thermal conductivity is 0.6 W/mK. Thermal impedance is 0.4° C in.^{2}/W. Dielectric strength (the ability to withstand electrical voltage without rupture) is 7,000 volts.

Tape is 0.0045″ thick and consists of 0.001″ of Kapton® polyimide film, 0.002″ of silicone rubber, and 0.0015″ of adhesive. Temperature range is –20° to +300° F. *3-ft. rolls* are wound without a spool; *54-ft. rolls* have a cardboard spool. Color is pale green.

Compression-Force Heat-Shrinkable Tape

Wrap this tough, flexible tape around an object and heat it, tape will shrink and apply pressure to the object. Use tape for compressing, shaping, forming, and banding various materials. When wrapping objects, tape should overlap half of its width. It starts to shrink at 160° F; reaches maximum (20%) shrinkage at 300° F. Shrinks lengthwise only.

Tape is 0.002″ thick. Temperature range is 200° to 400° F. Supplied on a cardboard spool. Color is translucent green.

Reflective Tape

A high-contrast reflective surface makes this tape perfect for high-lighting aisles and stairs, for use with hand-held tachometers, and for other applications needing a reflective surface.

Tape is 0.005″ thick and consists of a vinyl backing with aluminum coating and an acrylic adhesive. Tape also has a silicone release liner. Temperature range is 0° to 175° F. Color is silver.

Wd.	Lg., ft.	Spool ID/Material		Roll

Sterilization Indicator Tape

Also known as autoclave tape, this tape is designed for use in a steam autoclave. To indicate sterilization the word "Autoclaved" appears on the tape after 15 minutes at 250° F. Use to secure packs for sterilization.

Tape has a paper backing and a rubber adhesive. Will stick to glass, cloth, and metal without leaving a residue. Tape is 0.006″ thick. Temperature range is 20° to 250° F; apply at 40° to 120° F. Color is white.

Multipurpose Aluminum Foil Tape

The highly reflective surface of this indoor/outdoor tape dissipates heat and light. Tape is also conformable, so it can be applied to irregular and curved surfaces. Great for masking, general sealing, metal patching, and as a moisture and dust barrier. Color is shiny silver.

Temperature range is –40° to +325° F; apply at +30° to +120° F. Supplied on a cardboard spool with a 3″ ID.

0.003″ thick tape has 0.002″ thick aluminum foil with 0.001″ of acrylic adhesive.

0.005″ thick tape has 0.003″ thick aluminum foil with 0.002″ of acrylic adhesive. Meets Fed. Specs. L-T-80B and SAE-AMS-T-23397.

0.006″ thick tape has 0.005″ thick aluminum foil with 0.0013″ of acrylic adhesive.

High-Strength Fiberglass-Reinforced Aluminum Foil Tape

Aluminum foil is laminated to a tough fiberglass fabric for a high-strength, reflective tape that can wrap around complex shapes and tolerate cable flex. Ideal for flame-spray masking, sound and vibration dampening, and wire harness heat-shielding. Temperature range is –100° to +500° F. Tape is supplied on a cardboard spool with a 3″ ID, unless noted. Color is shiny silver.

Standard thickness consists of 0.0025″ thick aluminum foil with 0.0045″ of silicone adhesive.

Extra thickness consists of 0.0075″ thick aluminum foil with 0.0035″ of silicone adhesive.

★ Spool is plastic.

Clean Room Tape

Great for sealing and masking in clean room environments. Tape comes individually sealed in a clear polybag.

Vinyl— This particle-free vinyl tape is very conformable, and you can write on it. When removed, it leaves minimal adhesive residue. Tape has excellent abrasion resistance and is unaffected by moisture and most chemicals. Outgassing (the release of gaseous contamination) is less than 2.5 g/100 sq. in. per 24 hours.

Tape is 0.006″ thick, consisting of a 0.0045″ thick vinyl film with 0.0015″ of rubber adhesive. Temperature range is –20° to +200° F. Meets Fed. Spec. PPP-T-66E, Type 1, Class II: CID A-A-1689A.

Polyethylene— This low-density polyethylene tape with synthetic adhesive adheres better than the vinyl tape above. It leaves no residue upon removal and can be written on. Outgassing is less than 0.4 g/100 sq. in. per 24 hours.

Tape is 0.007″ thick. Temperature range is –20° to +200° F.

High-Temperature Aluminum Foil Tape

Get the reflective capabilities of aluminum foil plus the higher temperature resistance of a special silicone adhesive. This tape protects parts from moisture, dust, and chemicals (not resistant to acids), and its reflective surface dissipates heat and flames. Ideal for wrapping over insulation and engine support structures.

Tape is 0.0036″ thick and consists of a 0.002″ thick aluminum foil with 0.0016″ of silicone adhesive. Temperature range is –65° to +600° F; apply at 0° to +200° F. Color is shiny silver. Meets FAR (Federal Aviation Regulation) 25.853(a).

Aluminum Foil Tape with Conductive Adhesive

The adhesive on this tape supplies electrical conductivity on surfaces that can't be soldered. It's especially useful in EMI/RFI (electromagnetic interference/radio-frequency interference) shielding and cable-wrap applications. It has a surface resistivity of 0.04 ohms/sq. in. Tape has a peel-off liner.

Tape is 0.004″ thick and consists of a 0.002″ thick aluminum foil with 0.002″ thick acrylic adhesive. Temperature range is –40° to +325° F; apply at +30° to +120° F. Color is shiny silver. Meets flame spread requirements of UL 510.

2″	36	3″/Cardboard	76925A1	66.88

Noise-Damping Aluminum Foil Tape

Reduce noise with this aluminum foil tape. It has a unique viscoelastic polymer adhesive that converts vibration to negligible heat to reduce noise. Designed for use on panels and support structures to control resonant vibration.

Tape is 0.015″ thick and consists of a 0.01″ thick foil backing with 0.005″ of adhesive. Temperature range is 40° to 140° F; apply at same range. Supplied on a plastic spool. Color is silver.

Wd.	Lg., yds.	Spool ID		Roll
1″	5	1½″	6307A21	$16.13
2″	5	1½″	6307A22	39.11

Copper Foil Tape

Designed to shield integrated circuit chips, cables, and motors, this solderable electrically conductive foil tape is also suitable for EMI/RFI (electromagnetic interference/radio-frequency interference) shielding. Tape has a peel-off liner.

Temperature range is –20° to +310° F; apply at +30° to +120° F. Supplied on a cardboard spool. Components are UL recognized.

With Conductive Adhesive— Ideal for printed circuit board modification, security-alarm circuit repairs, and prototype wiring-board layout and design. Tape is 0.0035″ thick and consists of a 0.0014″ thick foil with 0.0021″ of adhesive. Surface resistivity is 0.01 ohms/sq. in.

With Nonconductive Adhesive— Protects electronic components from electrostatic discharge. Great for holding pieces together during soldering because solder flows freely across surface of tape. Tape is 0.0029″ thick and consists of a 0.0014″ thick foil with 0.0015″ of adhesive.

Copper Mesh EMI-Shielding Tape

Wrap this highly flexible, adhesive-backed tape around cable to suppress electromagnetic and radio frequency interference. A strip of metalized polyester is edged by a two-ply woven tinned copper mesh. Choose tape with a center strip made of either copper or aluminum metalized polyester. Tape has acrylic adhesive and a kraft paper release liner.

Tape is 0.040″ thick. When wrapping, overlap half of tape's width to achieve a highly effective 4-ply shielding. Temperature range is –40° to +347° F; apply at +40° to +80° F. Supplied on a plastic spool.

Duct Tape

A

High Thread Count Fine Weave

B-F

Med./Low Thread Count Standard Weave

G&H

Low Thread Count Standard Weave

J&K

Low Thread Count Coarse Weave

The quality of a duct tape involves a number of factors including adhesive, coating, backing, thickness, and tensile strength. With the cloth-backed duct tape (Styles A-E and G-K), a higher thread count means it tears straighter, looks smoother, and has higher strength.

Strong and water resistant, this tape has excellent adhesion and flexibility. Will not twist or curl during application. Tape has rubber adhesive and is polyethylene coated, except for *clean-removal conformable* and *easy-tear vinyl*, which are vinyl coated. Supplied on a cardboard spool with a 3″ ID (unless noted).

(A) Clean-Removal Conformable— Also known as gaffer's tape, this extremely flexible tape makes strong bonds even on odd-shaped objects and then removes cleanly without leaving a sticky residue. It has a waterproof vinyl-coated backing for extra durability and a nonreflective matte finish. Ideal for sealing equipment such as cases and canisters. Temperature range is 40° to 200° F; apply at 40° to 90° F (unless noted).

(B) Duct and Insulation Sealing— Use for the most demanding HVAC applications such as sealing flexible duct connections and seams in insulation. Also great as a covering over pipe insulation. Temperature range is 40° to 200° F; apply at 40° to 90° F (unless noted). 7612A6, A7, and A8 meet UL 723. 7612A95 is ideal for military packaging and conforms to Fed. Spec. PPP-T-60E, Type IV, Class I.

(C) Flame Retardant— Has flame-retardant adhesive. Designed for repairing cargo compartment liners. Temp. range is 40° to 200° F; apply at 40° to 90° F. Complies with FAR (Federal Aviation Regulation) 25.853(a).

(D) Nuclear Grade— Use in nuclear power plants to seal end caps on stainless steel pipes, hold labels and signs on stainless steel pipes, and seal HVAC metal ductwork. Temperature range is 50° to 200° F; apply at 50° to 90° F. Meets ANSI No. 45.2.2, ASME NQA-1, NRC (Nuclear Regulatory Commission) Guide 1.38.

(E) Super Bond— An extra-thick adhesive allows this tape to create an extra-strong bond. Ideal for filling gaps and bonding to rough surfaces like wood, plaster, stucco, brick, metal, and cement even in high temperatures. Withstands temperatures up to 200° F; apply at 40° to 150° F.

(F) Easy-Tear Vinyl— An embossed vinyl backing instead of a cloth backing makes this tape easy to unwind and tear by hand. It leaves less residue on surfaces than cloth-backed tape and won't stick to itself during application. Temperature range is 40° to 250° F; apply at 50° to 85° F.

(G) Long-Life Clean Removal— Removes cleanly even after six months and can remain on for up to a year without deterioration. Use for bundling, masking, sealing, joining, and patching. Withstands temperatures up to 200° F; apply at 40° to 120° F.

(H) General Duty— This multipurpose tape is good for packaging, securing fiberglass insulation, as a condensation barrier in refrigeration assemblies, and in short-term ductwork sealing. Temperature range is 40° to 200° F; apply at 40° to 90° F (unless noted).

(J) Economy Grade— When cost is a concern, choose this economical tape for your bundling, packaging, and holding needs. Temperature range is 40° to 200° F; apply at 40° to 80° F.

(K) Transparent— Our transparent tape lasts six times longer than traditional duct tape and makes repairs less obvious. Tape is UV resistant, easy to tear, and very conformable. Use it indoors and out to secure lightweight loads and for reinforcing, patching, splicing, and sealing. Tape is polyethylene-coated cloth with an acrylic adhesive. Temperature range is –20° to +173° F; apply at 0° to +120° F.

High-Temperature Mica Tape

Withstanding temperatures up to 2100° F, this tape has heat-resistant mica paper bonded to glass cloth and infused with a silicone elastomer to provide a fire barrier. It is an ideal protective wrap for wire and cable. When wrapping objects, tape should overlap half of its width.

Tape is 0.0047″ thick. Dielectric strength (the ability to withstand electrical voltage without rupture) is 1,198 volts. Thermal conductivity is 0.173 BTU. Apply at 0° to 300° F. Color is greenish brown.

Aluminum Foil Duct Tape

A&B

C

D

This flexible, aluminum foil tape has a peel-off liner and is supplied on a cardboard spool.

(A) General Purpose— Good for smooth and scrim (fiberglass-reinforced) surfaces. Use to seal air conditioning and refrigeration systems and for taping joints and seams against moisture and vapor on foil-jacketed insulation. Tape has a high-tack rubber adhesive and a total thickness of 0.004″. Temperature range is 32° to 150° F; apply at same range (unless noted). Meets UL 723 (unless noted).

(B) Low Temperature— Tape has a cold-weather acrylic adhesive that performs well in temperatures below freezing and has quick-stick ability when applied at normal temperatures. Tape is smooth and conforms to fibrous ducts, sheet metal ducts, and irregular surfaces. Great for vapor sealing fiberglass and duct board and for foil/scrim/kraft (FSK) systems. Tape is 0.003″ thick. Temperature range is –40° to +250° F; apply at –10° to +135° F.

(C) Foil/Scrim/Kraft (FSK)— Use for demanding, tear-resistant sealing jobs such as corner-board sealing. Good for patching and matching FSK duct boards and blankets. Diamond-patterned aluminum foil/fiberglass scrim backing comes with either a rubber adhesive or an acrylic adhesive (for lower temperatures). Tape with *rubber adhesive* is 0.007″ thick. Temperature range is +32° to +150° F; apply at same range. Tape with *acrylic adhesive* is 0.0065″ thick. Temperature range is –25° to +175° F; apply at –10° to +175° F.

(D) Printed— Engineered to meet UL 181A-P, this tape has UL 181B-FX flexible duct standard imprinted on it for easy identification. Use for airtight bonds on fiberglass duct-board systems. Tape is 0.004″ thick and has an acrylic adhesive. Temperature range is –30° to +300° F; apply at –10° to +100° F.

Polypropylene Tape for Flexible Ducts

This tape satisfies UL 181B-FX as a closure for flexible air ducts and air connectors. UL 181B-FX is printed on the tape. Tape is a polypropylene film with an acrylic adhesive. Temperature range is –35° to +260° F; apply at –10° to +260° F. Tape is 0.003″ thick and supplied on a cardboard spool. Black tape has silver print and silver tape has red print.

Fiberglass Pipe Repair Tape

Repair broken and leaking pipes in minutes; exposure to air or moisture activates this resin-coated fiberglass tape. To speed setting, activate with water (salt or fresh). Becomes rock hard in about 30 minutes (even when completely submerged in water), dries to an opaque beige color, and can be sanded and painted. Ideal for use on metal, PVC (polyvinyl chloride), rubber, fiberglass, copper, and plastic pipes. Tape retains fluid pressure on supply lines up to 150 psi. Maximum temperature is 600° F; apply at 50° to 120° F. Supplied without a spool. NSF 61 certified for use on drinking-water system components.

Tape includes a pair of disposable rubber gloves.

Conformable Metalized Cloth Duct Tape

For the appearance of a foil tape with better conformability, this tape is excellent for sealing flexible ducts, insulation, and aluminum-colored surfaces. Plus, it will not twist or curl during application. Tape is 0.011″ thick and consists of a metalized polyethylene-coated cloth with a rubber adhesive. Temperature range is 40° to 200° F; apply at 40° to 90° F. Tensile strength is 23 lbs./in. width; adhesion to steel is 55 oz./in. width. Tape is 2″ wide, 60 yards long, and supplied on a cardboard spool with 3″ ID. Color is silver.

7709A21 ..... **Roll** $15.14

Waterproof Aluminum Foil Repair Tape

Ideal for emergency leak repair and waterproofing, this tape provides a permanent seal for protection against water penetration and humidity. Provides resistance to flame spread and smoke. Tape is flexible, conformable, and can endure long-term UV exposure. Perfect for mending holes and leaks on gutters and downspouts, damaged shingles, roofing membranes, chimney flashings, and other roof penetrations.

Tape is 0.011″ thick and consists of a 0.002″ thick aluminum backing with 0.009″ of butyl rubber adhesive. Temperature range is 20° to 200° F; apply at same range. Tensile strength is 20 lbs./in. width; adhesion to steel is 75 oz./in. width. Tape is 2″ wide, 11 yards long, and supplied on a cardboard spool with 3″ ID; includes a peel-off liner. Meets UL 723.

7450A2 ..... **Roll** $23.10

Aluminum Flashing Tape

Form a watertight bond with almost any building material including metal, wood, plastic, concrete, brick, asphalt, and glass; this tape has an asphalt-based adhesive to conform to contours and stick firmly on contact. Ideal for edge flashing, repairing gutter joints, and many other flashing, sealing, and repairing jobs. Tape comes with either a bright aluminum or nonreflective smoky-gray finish and can be painted. Temperature range is –40° to +200° F; apply at +40° to +100° F. Supplied on a cardboard spool; includes a peel-off liner.

Bright aluminum tape is 0.052″ thick (0.002″ thick aluminum foil with 0.05″ of adhesive). ***Smoky gray*** tape is 0.055″ thick (0.005″ thick aluminum foil with 0.05″ of adhesive).

Butyl-Rubber Sealing Tape

An economical alternative to aluminum flashing tape, use this butyl tape to patch and seal metal ducts, gutters, and flashing; metal buildings and roofs; plus glass and nonporous surfaces. Tape is nonstaining, odorless, and paintable. It has permanent resilience and elongation properties, and won't crack, sag, or harden even under severe weather conditions.

Tape is 0.125″ thick. Temperature range is –20° to +180° F; apply at +40° to +140° F. Tape is supplied on a cardboard spool. Color is black.

Butyl-Coated PVC Foam Sealing Tape

Get a secure seal and protect against water and dust penetration. A butyl adhesive sealant completely surrounds a layer of PVC (polyvinyl chloride) foam tape, resulting in a sticky, flexible tape that readily conforms to corners and irregular shapes. Use it to seal metal to metal, to fill gaps on freezers and windows, and for marine applications. Comes with an easy-release liner.

Temperature range is –15° to +160° F; apply at +50° to +125° F. Tape is supplied on a cardboard spool. Color is black.

Outdoor Weatherproofing Tape

Ideal for weatherstripping, holding plastic sheeting to outside windows, and sealing unused windows and hatches; this tough polyethylene tape seals gaps to keep out cold, heat, dirt, and moisture.

Tape is 0.006″ thick and consists of a 0.005″ thick polyethylene film with 0.001″ thick acrylic adhesive. Temperature range is –45° to +176° F; apply at temperatures above +50° F. Tape is supplied on a plastic spool. Color is clear.

Wd.	Lg., yds.	Spool ID		Roll
2″	16	1½″	1228A56	$5.94

Solvent-Resistant Polyester Tape—
Adhesive on Both Sides

Hold and mount metal, glass, wood, and most plastics even where solvents are a concern. Tape includes a paper liner. Temperature range is –40° to +150° F; apply at +70° to +100° F. Supplied on a cardboard spool.

Not recommended for use in direct sunlight and other UV-light sources.

Standard—0.004″ thick and consists of a 0.0005″ thick polyester film with 0.00175″ of acrylic adhesive on each side. Color is clear.

High Shear Strength—Ideal for applications where tape must withstand high shear force, or stress, without ripping. Tape is 0.004″ thick and consists of a 0.001″ thick polyester film with 0.0015″ of rubber adhesive on each side. Color is off-white.

Gap-Filling Expandable Foam Sealant Tape

Tape comes compressed and gradually expands to follow contours and fill voids. Ideal for joints in metal buildings and roofs as well as for expansion/compression joints affected by movement due to thermal expansion and contraction. Use as a gasket in nonmoving applications where material is held at a high degree of compression. Also use as an alternative to caulk, liquids, and butyl-tape sealants.

Tape is made of polyurethane foam impregnated with an acrylic-modified asphalt emulsion. It's UV stable, has excellent mildew resistance, and will not dry out and become hard or brittle. Adhesive is on one side. Temperature range is –40° to +185° F; apply at same range if installed as a gasket and apply at +40° to +185° F if installed as an expanded sealant. Does not include a spool. Color is black.

Cloth Tape—
Adhesive on Both Sides

Excellent for mounting, holding, and splicing. Also good for installing carpeting, padding, and vinyl on stairways and floors. Tape is cotton cloth with a rubber adhesive on each side and an easily removable polyethylene film liner.

Temperature range is 40° to 200° F; apply at 40° to 90° F. Supplied on a cardboard spool with a 3″ ID. Color is natural.

Not recommended for use in direct sunlight or other UV-light sources.

Standard tape is 0.013″ thick.

Flame-retardant tape is 0.014″ thick and meets FAR (Federal Aviation Regulation) 25.853(a).

Also Available: Black polypropylene tape for outdoor use between 0° and 120° F. Fungus resistant. Length is 36 yards. Please ask for 77195A9 and specify width: 1″, 1½″, 2″, 3″, 4″, or 6″.

Masking Tape—
Adhesive on Both Sides

This tape has a paper liner and is supplied on a cardboard spool.

General Purpose—Made of strong, white, flat-back paper that's coated with a rubber adhesive to bond to most surfaces. Ideal for general purpose bonding and laminating, including picture hanging and golf club grip repair. Tape is 0.007″ thick and consists of 0.0045″ thick paper with 0.00125″ of adhesive on each side. Temperature range is 20° to 180° F; apply at 40° to 120° F. Color is tan. Meets Fed. Spec. CID A-A-180C, Type II.

Not recommended for use in direct sunlight or other UV-light sources.

For Smooth Surfaces—Sticks well to clean, smooth surfaces. Ideal for splicing and bonding paper, foil, and fabric. Tape is 0.006″ thick and consists of 0.003″ thick paper coated with 0.001″ of high-shear (able to withstand high stress without ripping) rubber adhesive on both sides. Temperature range is –30° to +150° F; apply at +70° to +100° F. Color is off-white.

General Purpose Polyethylene Tape—
Adhesive on Both Sides

With excellent adhesion to irregular and porous surfaces, this tape is perfect for general holding and splicing. It's also good for quick, easy tacking of carpet edges.

Tape is 0.009″ thick and consists of a 0.003″ thick polyethylene film with 0.003″ of aggressive rubber adhesive on each side. Also has a paper liner. Temperature range is –40° to +120° F; apply at +70° to +100° F. Supplied on a cardboard spool. Color is white.

Not recommended for use in direct sunlight or other UV-light sources.

Removable Vinyl Tape—
Adhesive on Both Sides

The inner side is a permanent adhesive, the outer side is a tacky, reusable adhesive; ideal for temporary holding and applications requiring the repositioning of items such as removable stickers and labels. Tape is UV and solvent resistant.

Tape is 0.0034″ thick and consists of a 0.0014″ thick polyvinyl chloride film with 0.001″ of adhesive on each side. There is no liner. Temperature range is –60° to +125° F; apply at +70° to +100° F. Supplied on a cardboard spool. Color is clear.

Light Duty Polyethylene Foam Tape—Adhesive on Both Sides

An economical way to bond, seal, and absorb sound and vibration. This polyethylene foam stretches more easily than polyurethane and conforms to irregular surfaces. Closed-cell construction. Choose tape with rubber or acrylic adhesive on both sides. Tape has peel-off paper liner. Supplied on a cardboard spool with a 3″ ID. **To Order:** Please specify color: black or white.

Note: For polyethylene foam tape with adhesive on one side, see page 3562.

With Rubber Adhesive—Has a high initial tack, adheres to a wide variety of surfaces, and is moisture resistant. Temperature range is –20° to +120° F; apply at +70° to +100° F (unless noted). Can be used indoors and outdoors, but is not recommended for long-term outdoor use or direct exposure to UV light.

With Acrylic Adhesive—This UV-resistant tape is ideal for indoor/outdoor adhesion to plastics, wood, and metals. Its adhesive bond increases over time. Temperature range is –20° to +158° F; apply at +70° to +100° F.

♦ Temperature range is –20° to +160° F; apply at +60° to +85° F. Offered only in white.

Foam Tape Shapes—Adhesive on Both Sides

The same as the polyethylene and polyurethane foam tapes on this page, but cut into time-saving shapes. Shapes have adhesive on both sides and an easy-release kraft paper liner. Tape is 0.063″ thick. Color is white. Not recommended for use in direct sunlight or other UV-light sources.

Polyethylene—General-purpose mounting tape with closed-cell polyethylene foam and a rubber adhesive for an instant hold. It's more economical and conforms to irregular surfaces better than polyurethane. Temperature range is –20° to +158° F; apply at +60° to +85° F. For indoor use only.

Polyurethane—Offers greater durability and higher internal strength than polyethylene foam tape. Has high-performance closed-cell polyurethane foam with acrylic adhesive. Temperature range is –40° to +220° F; apply at +65° to +85° F. For indoor and outdoor use.

Multipurpose Polyurethane Foam Tape—Adhesive on Both Sides

With excellent temperature resistance plus high internal strength and holding power, this tape is ideal for many mounting and holding applications. Foam has an acrylic adhesive on both sides. It absorbs shock, accommodates thermal expansion, and attaches well to rigid surfaces. Supplied on a cardboard spool (unless noted).

Note: For polyurethane foam tape with adhesive on one side, see pages 3560-3561.

Indoor Tape

Open-cell foam construction. Temperature range is –20° to +220° F; apply at +70° to +100° F. Tape has a paper liner. 5-yd. rolls are supplied on a plastic spool.

Conformable Neoprene EPDM/SBR Foam Tape—Adhesive on Both Sides

Conforms better than other foam tapes and is highly compressible—great for gasketing, mounting, and sound/vibration dampening. Tape can be used indoors and out, but it is not recommended for direct exposure to UV light.

Tape has an acrylic adhesive on both sides and a peel-off paper liner. Temperature range is 0° to 158° F; apply at 50° to 80° F. Tape is supplied on a cardboard spool. Color is black. *Note:* For neoprene foam tape with adhesive on one side, see page 3552.

3M VHB (Very High Bond) Foam Tape—Adhesive on Both Sides

Looking for a tape that can take the place of rivets, spot welds, liquid adhesives, and other permanent fasteners? That's exactly what this acrylic foam tape does. It has an acrylic adhesive on both sides that is "built into the tape," giving it super-strong, long-lasting holding power that is significantly higher than other tapes. Tape has closed-cell construction, conforms to irregular surfaces, and can be used indoors and outdoors. The 1- and 5-yard rolls are supplied on a 1½″ ID plastic spool, and the 36- and 72-yard rolls are supplied on a 3″ ID cardboard spool.

Standard Tape

Ideal for bonding aluminum, glass, stainless steel, and sealed wood. Temperature range is –40° to +200° F (unless noted); apply at +50° to +100° F (unless noted).

Tape for Hard-to-Bond Surfaces

Use for bonding to powder-coated surfaces, polypropylene, polystyrene, steel, aluminum, and glass. Also great for bonding to ABS, rigid vinyl, nylon, and enamel and epoxy paint surfaces. Temperature range is –40° to +160° F; apply at +50° to +100° F.

Multipurpose Tape

This multipurpose tape is highly conformable and ideal for bonding most plastics. It bonds to plasticized vinyl as well as to steel, aluminum, glass, and other hard-to-bond materials such as ABS, rigid vinyl, nylon, and enamel and epoxy paint surfaces. Temperature range is –31° to +200° F (unless noted); apply at +60° to +100° F. UL 746C listed.

3M #4941 VHB (Very High Bond) Foam Tape Shapes—Adhesive on Both Sides

Same as the multipurpose 3M VHB acrylic foam tape on this page, but cut into shapes for your convenience. These strong-bonding, versatile rectangles, squares, and discs are highly conformable and can be used on metal, plastic, and glass. Shapes have an acrylic adhesive on both sides. Tape is 0.045″ thick. Temperature range is –40° to +200° F; apply at +60° to +100° F. Color is gray.

Removable Acrylic Foam Tape—Adhesive on Both Sides

Foam and adhesive are both acrylic, so they won't separate when removed from a surface. Plus, tape has excellent resistance to direct-sunlight exposure. Adhesive is blended into the foam on both sides. Tape has a clear polyester-film liner. Tape is 0.031″ thick. Temperature range is 30° to 175° F; apply at 50° to 70° F. Color is clear. The 4-yard rolls are supplied on a 1½″ ID plastic spool, and the 27-yard rolls are supplied on a 3″ ID cardboard spool.

Weather-Resistant Vinyl Foam Tape—Adhesive on Both Sides

Because of its high strength and ability to conform well to irregular surfaces, this vinyl foam tape is excellent for mounting identification signs and nameplates outdoors. UV and solvent resistant, it's made of closed-cell PVC (polyvinyl chloride) foam with an acrylic adhesive blended into the foam surface on both sides. Tape has a paper liner. Temp. range is –20° to +150° F; apply at +70° to +100° F. The 5-yard rolls are supplied on a 1½″ ID cardboard spool, and the 36- and 72-yard rolls are supplied on a 3″ ID cardboard spool (unless noted). 0.125″ thick tape is black. **To Order:** Please specify color for 0.031″ thick tape and 0.063″ thick tape: black or white.

Note: For vinyl foam tape with adhesive on one side, see page 3553.

About Hook and Loop

Just like burrs grab onto your clothing, these synthetic hooks aggressively grab fabric loops. When mated, the hook and loop gripping elements make a sturdy and reliable fastener. You can even use the hook alone—it will grab onto existing fabric, such as carpeting and upholstery. Use for bundling cable, holding matting in place, putting up signs, holding down tarps, creating display boards, holding tools, and temporary fixturing.

Cycle life is the number of openings and closings a mated hook and loop will endure. This is determined by opening and closing the fastener until the performance reaches 50% of its initial value.

Shear strength is the amount of force required to make the hook slide over the loop.

Pull-apart strength is the amount of force required to pull apart the hook from the loop.

●Pounds of force required to pull apart a 1″ wide strip.

Super-Adhesive All-Purpose Nylon Hook and Loop

An extra-strong rubber adhesive backing sticks where others fail, especially to polypropylene and polyethylene. It also adheres to most metals, plastics, and painted surfaces. Hook and loop is 0.188″ thick when mated. Hook is 0.125″ thick and loop is 0.125″ thick.

Material temperature range is –70° to +200° F. Adhesive temperature range is –20° to +120° F; adhesive application range is +68° to +75° F. Choose combination packs that include both hook and loop material in the lengths indicated, or order hook and loop separately.

For information about hook and loop, see page 3454.

All-Purpose Nylon Hook and Loop

A combination of moisture and chemical resistance makes this woven nylon hook and loop ideal for most holding applications. Hook and loop is 0.125″ thick when mated. Hook is 0.08″ thick and loop is 0.09″ thick. Material temperature range is –70° to +200° F. Adhesive temperature range is –20° to +225° F; adhesive application range is +40° to +90° F. Adhesive is acrylic. Choose combination packs that include both hook and loop material in the lengths indicated, or order hook and loop separately.

To Order: Please specify color: black, white, or beige (unless noted).

Also Available: Elastic all-purpose nylon loop with plain back. Material temperature range is 34° to 210° F. Please ask for 9652K888 and specify length, width, and color.

Nylon Hook and Loop Shapes

Why waste time measuring and cutting? This nylon hook and loop is already cut. Hook and loop shapes are sold separately.

Strips

These semirigid vinyl strips have a plain back. Easily attach them to rigid surfaces (metal, plastic, wood) by gluing, stapling, screwing, or nailing. Hook and loop is 0.245″ thick when mated; hook is 0.125″ thick and loop is 0.145″ thick. Temperature range is –20° to +200° F; apply above +68° F. Color is black.

Size, Wd. × Lg.	Hook Each	Loop Each
1″ × 48″	9737K11 $6.46	9737K21 $6.17
1 3/4″ × 48″	9737K51 9.17	9737K61 9.17

Tabs

Here's the perfect choice when you need only a small piece of hook and loop. This flexible nylon hook and loop has a rubber adhesive back. Hook and loop is 0.187″ thick when mated; hook is 0.0937″ thick and loop is 0.125″ thick. Material and adhesive temperature range is –20° to +100° F; apply at +68° to +100° F. Color is black.

Size	Pkg. Qty.	Hook Pkg.	Loop Pkg.
3/4″ sq.	10	9737K71 $1.95	9737K81 $1.95

Washers

These rigid vinyl discs have a plain back. Washers can be glued down, or use the 1/8″ diameter center hole for attaching to surfaces with a screw, nail, or rivet. Hook and loop is 0.125″ thick when mated; hook is 0.0625″ thick and loop is 0.0625″ thick. Temperature range is –20° to +190° F; apply at same range. Color is black.

For information about hook and loop, see page 3454.

Vinyl-Bonding Nylon Hook and Loop

Adhere this hook and loop to flexible vinyl with the specially formulated acrylic adhesive backing. Hook and loop is 0.13″ thick when mated; hook is 0.0937″ thick and loop is 0.125″ thick. Material and adhesive temperature range is –20° to +120° F; apply at +68° to +100° F. Color is black. Hook and loop are sold separately.

To Order: Please specify length: 15 ft., 30 ft., or 75 ft.

Flame-Retardant Nylon Hook and Loop

This woven nylon hook and loop meets specifications for FAR (Federal Aviation Regulation) 25.853 (a). Hook and loop is 0.125″ thick when mated; hook is 0.0625″ thick and loop is 0.0625″ thick. Material temperature range is –20° to +200° F. Adhesive temperature range is –10° to +130° F; adhesive application range is +65° to +75° F. Color is beige. Choose combination packs that include both hook and loop material in the lengths indicated, or order hook and loop separately.

Flame-Resistant Hook and Loop

Withstanding temperatures up to +380° F, this hook and loop is made of flame-resistant polyphenylene and has a plain backing. Hook and loop is 0.125″ thick when mated; hook is 0.079″ thick and loop is 0.09″ thick. Temp. range is –30° to +380° F. Color is natural. Meets Federal Motor Vehicle Safety Standard 302 and FAR (Federal Aviation Regulation) 25.853(12) and (60).

Hook and loop are sold separately. Maximum continuous length is 150 feet.

Heat-Resistant Stainless Steel Hook and Loop

Get the flexibility and advantages of hook and loop combined with the corrosion and heat resistance of Type 308 stainless steel. Made of woven stainless steel yarn with stainless steel hooks and loops and a plain backing. With repeated use hooks and loops will break and fastening strength will diminish.

Hook and loop is 0.120″ thick when mated; hook is 0.084″ thick and loop is 0.078″ thick. Temp. range is –40° to +800° F. Color is brown.

Hook and loop are sold separately. Maximum continuous length is 75 feet.

1″-wide Hook	96225K41	Per Ft.	$28.09
1″-wide Loop	96225K61	Per Ft.	$28.50

Super-Wide Hook and Loop

Need a strong grip over a large surface area? This super-wide hook and loop fabric handles the job. Hook has a woven polyester base with polypropylene mushroom-shaped heads; loop is made of knit nylon. Both have a plain backing.

Hook and loop is 0.074″ thick when mated; hook is 0.051″ thick and loop is 0.055″ thick. Temperature range is 0° to 212° F for hook and 0° to 220° F for loop. Color is black.

Hook and loop are sold separately. Maximum continuous length is 75 feet.

Wd.	Hook	Per Ft.	Wd.	Loop	Per Ft.
57″	94975K42	$16.26	50″	94975K52	$8.36

For information about hook and loop, see page 3454.

Weather-Resistant Polyester Hook and Loop

Get resistance to water, UV light, and chemicals. Hook and loop is 0.12″ thick when mated; hook is 0.075″ thick and loop is 0.075″ thick. Material temperature range is –70° to +200° F. Adhesive temperature range is –20° to +225° F; adhesive application range is +50° to +100° F. Adhesive is acrylic. Color is black. Choose combination packs with both hook and loop or order hook and loop separately.

Marine-Grade Adhesive-Back Polyester Hook and Loop

Hook and loop has a high-tack rubber adhesive that's quick-setting in moist conditions; good for use outdoors. Hook and loop is 0.12″ thick when mated; hook is 0.075″ thick and loop is 0.075″ thick. Material temp. range is –70° to +200° F. Adhesive temp. range is –20° to +180° F; adhesive application range is +50° to +100° F. Color is black. Hook and loop are sold separately. **To Order:** Please specify hook or loop.

Self-Lock Mushroom-Head Fasteners

With 250 mushroom-shaped heads per square inch, there's no need for separate hook and loop pieces. This UV-resistant polyolefin material attaches to itself for a secure hold. Apply above +68° F.

Adhesive back bonds to most surfaces. Temperature range is –20° to +120° F.

Super-duty adhesive back has a high-performance adhesive that withstands moisture and higher temperatures than the adhesive above. Also bonds to vinyl. Temperature range is –20° to +200° F.

Plain back can be sewn, stapled, or used with mechanical fasteners. Temp. range is –20° to +200° F.

Mil. Spec. Nylon Hook and Loop

Hook meets MIL-A-A-55126A, Type 2, Class 1; and loop meets MIL-A-A-55126A, Class 1. Both have plain backing. Hook and loop is 0.141″ thick when mated; hook is 0.078″ thick and loop is 0.1″ thick. Hook temperature range is –30° to +280° F; loop temperature range is –30° to +200° F. Apply at same ranges. Hook and loop are sold separately.

To Order: Please specify length from the available lengths listed.

Super-Grip Nylon Double-Headed Hook

Get up to twice the gripping power of other hook materials. These double-headed hooks have a high-strength acrylic adhesive backing that bonds to a wide range of smooth surfaces.

Hook is 0.116″ thick. Material temperature range is –30° to +200° F. Adhesive temperature range is +20° to +225° F; adhesive application temperature range is +50° to +100° F. Color is black.

Use with loop 9489K on page 3455.

Magnetic Poles

The holding power of magnets is concentrated into areas called poles. All magnets have at least one set of poles (single-pole magnets only have one set), consisting of one north (N) and one south (S). Similar poles repel each other, whereas opposite poles attract. Even when cut, a magnet always retains two poles, forming new poles on the cut or broken faces. Pole orientations are shown below.

Holding Power on One Face— Magnets with this orientation concentrate their holding power on one face. *Single-pole magnets* have greater holding power on thicker material and *multi-pole magnets* have greater holding power on thinner material.

Holding Power on Both Faces— The most common pole orientation, these magnets have good pull on both faces.

Single-Pole Magnet, Holding Power on One Face

Multi-Pole Magnet, Holding Power on One Face

Single-Pole Magnet, Holding Power on Both Faces

Multi-Pole Magnet, Holding Power on Both Faces

Flexible Magnets

- Material: Ferrite bonded with synthetic rubber
- Color: Dark brown to black
- Temp. Range: 0° to 150° F
- Magnetic Pull: Very low
- Cut with scissors

Easy to cut into custom shapes, flexible magnets are ideal for use as latches, tool holders, display materials, and shelf labeling. They offer high resistance to demagnetization and corrosion. For flexible magnetic-backed dry-erase boards, see page 1886.

Strips

Increased-pull magnets have at least 40% more pull than *standard-pull* magnets. Thickness tolerance is ±0.008″. Width tolerance is ±0.050″.

To Order: Please specify 5-, 10-, 20-, 50-, or 100-ft. length, unless noted.

Printable Flexible Magnet Paper

- Material: Ferrite bonded with synthetic rubber, with one paper face
- Color: Dark brown to black magnet; paper face is white
- Temp. Range: –15° to +160° F
- Magnetic Pull: Very low
- Cut with scissors

Insert this paper-faced flexible magnet into your inkjet printer (not for use in laser printers or photocopiers) for quick sign making. Thickness tolerance is ±0.002″. Width and length tolerances are ±0.020″. Not rated for maximum pull. Sold in packages of 5.

High-Temperature Flexible Magnets

- Material: Ferrite bonded with synthetic rubber
- Color: Brown
- Temp. Range: –40° to +300° F
- Magnetic Pull: Very low
- Cut with carbide cutters

When you're working with high temperatures, these sheets provide the highest temperature resistance of the flexible magnets we offer. They're also pliable and resistant to demagnetization and corrosion. Thickness tolerance is ±0.007″. Width and length tolerances are ±1%. *Adhesive-backed magnets* have an acrylic adhesive with a temperature range of –40° to +250° F.

Ultra-High-Strength Stretchable Magnets

Holding Power on One Face — *Holding Power on Both Faces*

- Material: Neodymium-iron-boron bonded with synthetic rubber
- Color: Brownish gray
- Temp. Range: –40° to +212° F
- Magnetic Pull: Low
- Cut with scissors

You can easily stretch these magnetic strips to cover corners and irregular surfaces because they're stronger, more flexible, and softer than other flexible magnets. Thickness tolerance is ±0.0075″. Width tolerance is ±0.020″. Length tolerance is ±0.012″.

High-Temperature Ceramic Magnets

- Material: Ferrite
- Color: Gray
- Max. Temp.: 480° F, unless noted; low end not rated
- Magnetic Pull: Low to medium
- Machine with diamond tooling

An economical choice, ceramic magnets offer good temperature and corrosion resistance.

Rectangular Bar Magnets

Length and width tolerances are ±2%, unless noted. Thickness tolerance is ±0.050″.

Build-Your-Own Encased Magnets

Get all the pieces of an encased magnet, but unassembled so you can mount the washer wherever you want to create a magnetic hold. Once assembled, you can screw the magnet directly into a surface or flush mount into a hole. Maximum temperature is 200° F. Color is gray. ***Press-fit*** kit includes a steel cup, a neodymium magnet, a steel washer, and one screw. ***Screw-in*** kits include a steel cup, a neodymium magnet, a vinyl friction disc, a steel washer, and two screws.

Cup OD	Cup Thick.	Magnet OD	Magnet ID	Magnet Thick.	Max. Pull, lbs.		Each

Warning! ***"Max. Pull, lbs." ratings are based on ideal conditions. Variations in iron content, thickness, and surface finish and condition will all reduce these ratings. Do not use for lifting over people.***

For information about magnet materials, see page 3458.

Encased Ceramic Magnets

1

2

3

4

5

6

- Material: Ferrite, unless noted
- Color: Gray to black, unless noted
- Max. Temp.: 300° F, unless noted; low end not rated
- Magnetic Pull: Low
- Not recommended for machining

All have a casing that protects the magnet material and concentrates the magnetic field. Magnets with more poles typically have a higher pull.

Magnets without mounting holes are designed for press-fit installation. All other magnets have one mounting hole, except magnets with a center-to-center dimension have two holes (screws not included, except Style 13 includes two nuts and a screw).

♠ Maximum temperature is 248° F. ♣ Color is red. Maximum temperature is 212° F. ★ Maximum temperature is 125° F.
♦ Maximum temperature is 180° F. ■ Material is ferrite bonded with synthetic rubber. Color is brown. Maximum temperature is 140° F.

Warning! ***"Max. Pull, lbs." ratings are based on ideal conditions. Variations in iron content, thickness, and surface finish and condition will all reduce these ratings. Do not use for lifting over people.***

For information about magnet materials, see page 3458.

Ultra-High-Temperature Alnico Magnets

- Material: Aluminum-nickel-cobalt Grades 5 and 8
- Color: See below
- Max. Temp.: 975° F; low end not rated
- Magnetic Pull: Medium
- Machine with an abrasive grinding wheel

An early commercial magnet material, Alnico offers high temperature and corrosion resistance. It also has greater magnetic pull than ceramic magnets. Grade 8 magnets resist demagnetization better than Grade 5.

Horseshoe, U-Shaped, and Bridge Magnets—Grade 5

- Color: Red, unless noted

All come with a keeper (metal plate) to reduce damage, unless noted. Magnets with a mounting hole size have one mounting hole (screws not included).

Horseshoe Magnets—Length, width, and thickness tolerances are ±0.045″.

U-Shaped and ***Bridge Magnets***—Length, width, and thickness tolerances are ±0.016″.

Disc Magnets—Grade 5 and Grade 8

Grade 5 *Grade 8*

- Color: Grade 5, gray; Grade 8, bluish-gray to silver

Grade 5 has a diameter tolerance of ±0.016″ and a thickness tolerance of ±0.005″. Grade 8 has diameter and thickness tolerances of ±0.020″.

Dia.	Thick.	Max. Pull, lbs.		Each

Encased Alnico 5 Magnets

- Material: Aluminum-nickel-cobalt Grade 5
- Color: Gray, unless noted
- Max. Temp.: See below
- Magnetic Pull: Medium
- Not recommended for machining

An aluminum, steel, or urethane rubber housing protects the magnet material and helps concentrate the magnetic field. Alnico Grade 5 offers high temperature and corrosion resistance. It has greater magnetic pull than ceramic magnets. Screws not included (for magnets with a mounting hole).

Pot Magnets

- Max. Temp.: 428° F, unless noted

Encased in a steel housing. All come with a keeper (metal plate) to reduce damage, unless noted. Diameter tolerance is ±0.012″. Thickness tolerance is ±0.010″.

Warning! ***"Max. Pull, lbs." ratings are based on ideal conditions. Variations in iron content, thickness, and surface finish and condition will all reduce these ratings. Do not use for lifting over people.***

For information about magnet materials, see page 3458.

Machinable High-Pull Neodymium-Iron-Boron Magnets

- Material: Neodymium-iron-boron bonded with epoxy resin
- Color: Gray
- Temp. Range: –40° to +300° F
- Magnetic Pull: High
- Machine with carbide tooling

Bonded with epoxy resin to become machinable, these magnets still keep the high pull of neodymium-iron-boron. Magnets have high strength and high resistance to demagnetization.

Rectangular Bar Magnets

Length and width tolerances are ±0.008″. Thickness tolerance is ±0.005″.

Ultra-High-Pull Neodymium-Iron-Boron Magnets

- Material: Neodymium-iron-boron
- Color: Gray, except nickel-plated magnets are silver
- Max. Temp.: 300° F, unless noted; low end not rated
- Magnetic Pull: Highest
- Not recommended for machining

With up to 10 times the pull of Alnico magnets, these magnets have high strength and high resistance to demagnetization. *Nickel-plated magnets* offer greater corrosion resistance.

Adhesive-Backed Ultra-High-Pull Neodymium-Iron-Boron Magnets

- Material: Neodymium-iron-boron
- Color: Silver
- Max. Temp.: 175° F; low end not rated
- Magnetic Pull: Superior
- Not recommended for machining

They have the same high pull, strength-to-weight ratio, and resistance to demagnetization as plain-back neodymium-iron-boron magnets, but with an acrylic adhesive for easy fastening. All are nickel plated for increased corrosion resistance. Length, width, diameter, and thickness tolerances are ±0.005″.

Adhesive on North Pole Side

Ultra-High-Pull Encased Neodymium-Iron-Boron Magnets

- Material: Neodymium-iron-boron
- Color: Grayish silver, unless noted
- Temp. Range: –20° to +176° F
- Magnetic Pull: Superior
- Not recommended for machining

All have a casing that protects the magnet material and concentrates the magnetic field. All have a hole for mounting (screws not included), unless noted. Diameter and thickness tolerances are ±0.03″, except magnets with a rubber housing are ±0.05″.

Steel housing with stainless steel cover adds a layer of stainless steel to the exposed magnet face for greater corrosion resistance. *Rubber housing* is ideal when you need scratch resistance.

▲ Comes with a keeper (metal plate) to reduce damage. Color is blue. ■ Has two mounting holes with a ctr.-to-ctr. distance of 1 7/8″.

★ Prices are 25% lower when you order in quantities of 50 or more.

Warning! ***"Max. Pull, lbs." ratings are based on ideal conditions. Variations in iron content, thickness, and surface finish and condition will all reduce these ratings. Do not use for lifting over people.***

For information about magnet materials, see page 3458.

High-Pull Encased Samarium-Cobalt Magnets

Smooth

Knurled

- Material: Samarium-cobalt Grade 2-17
- Color: Silver
- Temp. Range: 14° to 302° F
- Magnetic Pull: Very high
- Not recommended for machining

Encased in a steel housing that protects the magnet material and concentrates the magnetic field, yet retains the high pull of samarium-cobalt. *Knurled magnets* allow for better gripping. Diameter and thickness tolerances are ±0.008″.

Dia.	Thick.	Max. Pull, lbs.	*Smooth*	Each	*Knurled*	Each

Easy On/Off Encased Magnets

You're only a half turn away from securing, positioning, and picking up metal. Turn the handle on for full magnetic hold; turn off and nothing will stick. Magnet is neodymium-iron-boron and nickel plated for increased corrosion resistance. Encased in a zinc-plated steel housing. Maximum temperature is 170° F.

High-Temperature High-Pull Samarium-Cobalt Magnets

- Material: Samarium-cobalt Grades 1-5 and 2-17
- Color: Gray
- Temp. Range: Grade 1-5, –40° to +482° F; Grade 2-17, –40° to +572° F
- Magnetic Pull: Grade 1-5, high; Grade 2-17, very high
- Machine with diamond tooling

The original rare earth magnet, samarium-cobalt has greater pull than other high-temperature magnet materials such as ceramic and Alnico. Length, width, diameter, and thickness tolerances are ±0.005″.

Pocket-Size Magnetizer/Demagnetizer

Compact 2″ Lg.×1″ Wd.×2″ Ht. unit works without electrical power to quickly magnetize or demagnetize small tools. Simply pass tools through one of the openings. Openings are approximately 1/2″ Wd.×1″ Ht.

5863K49 ..... **Each** $5.97

Magnetic Pole Detectors

Viewing Paper— Press a sheet of this green magnetic viewing paper onto any magnet to quickly identify the pole locations. Each sheet can be used multiple times. You'll get three 0.005″ thick 3″×3″ sheets per package.

5702K21 ..... **Per Pkg.** $8.89

Electronic Detector— Point this palm-sized detector at your magnet and press the button—the red light indicates north, the green light indicates south. Operation is completely electronic, eliminating demagnetization. Unit has a sensitivity of ±150 gauss, is 5 1/2″ Lg.×1″ Wd., and is powered by four 1.5-volt batteries (included).

57255K71 ..... **Each** $44.21

Ferrite Cores

Ferrite magnet core materials generate magnetism when a magnet wire is wrapped over them and energized (wire not included; see page 785). They lose their magnetism once the electric current is turned off. Great for use as inductors and as transformers in electrical circuits.

Warning! ***"Max. Pull, lbs." ratings are based on ideal conditions. Variations in iron content, thickness, and surface finish and condition will all reduce these ratings. Do not use for lifting over people.***

For more electromagnets designed for lifting, see pages 1477-1478.

Surface-Contact DC-Powered Electromagnets

Rectangular *Round*

Create magnetic holding power anytime. Just position the magnet face to make direct contact with an object's flat surface and turn the power on. Turn off to demagnetize. Max. temp. is 100° F. *Note*: Holding power is not adjustable.

All include 2-ft. long wire leads (unless noted) for connecting to a DC electromagnet power supply (required; sold separately below). They have one threaded hole on the bottom for mounting (screws not included), except those with a center-to-center dimension, which have two holes.

Magnets with ***spring-loaded release*** have a pin that quickly releases the held object when power is turned off.

■ Wire leads are 3-ft. long. ▲ Wire leads are 6-ft. long.
♣ Wire leads are 1-ft. long.

DC-Powered Electromagnets with Parallel Poles

Parallel poles create better magnetic pull through flat surfaces that are thinly painted, plated, or coated. Turn the power on to create a magnetic field and turn off to demagnetize. Maximum temperature is 192° F. All require a DC electromagnet power supply (sold separately on this page) attached via a terminal strip (leads not included). All have two mounting holes (screws not included). *Note:* Holding power is not adjustable.

Plug-In Surface-Contact Electromagnets

Round

No additional power source needed—simply position the magnet face to make direct contact with an object's flat surface and plug the magnet in. Simply unplug to demagnetize. The plug contains a power supply, also known as a rectifier, which lets you convert power from AC to DC. Maximum temperature is 100° F. *Note:* Holding power is not adjustable.

Rectangular magnets have two threaded holes on the bottom for mounting, while ***round*** magnets have only one (screws not included). All have a 3-ft. long power cord with three-prong plug, unless noted.

Watts	Size, Wd. × Lg.	Ht.	Max. Pull, lbs.	Mount. Hole Thread Size	Mount. Hole Ctr.-to-Ctr.		Each

♦ Has a 6-ft. long power cord.

DC Electromagnet Power Supplies

A *B*

Also known as rectifiers, these units convert AC power to DC, so you can provide power to all of the DC-powered electromagnets on this page. Choose a power supply with watts equal to or greater than your magnet's watts. Max. temperature is 140° F. All have four mounting holes. All except Style C have a NEMA 12 steel enclosure.

Automatic Release—Once turned off, the magnetic current reverses automatically for easy release. Ideal for high-speed automated magnetic equipment. The enclosure has input and output connections via a terminal strip. A SPST switch, limit switch, or 120 VAC PLC output is required.

Manual Release—An on-off-release switch must be flipped to reverse the magnetic current for release. The 48-watt unit has 5-ft. input and output power cords with three-prong plugs; 800 watt has 5-ft. wire leads and a 5-ft. power cord with three-prong plug; and the 100-watt unit has a 6-ft. input power cord with three-prong plug and 3-ft. output power cord with three-prong plug.

	Watts	Wd.	Lg.	Ht.	Mount. Hole Size	12 VDC Output	Each	24 VDC Output	Each	110 VDC Output	Each

★ Uses 240/480 VAC input.

C

Warning! ***"Max. Pull, lbs." ratings are based on ideal conditions. Variations in iron content, thickness, and finish will reduce ratings. In lifting applications, do not use magnets more than 1/4 of their rated capacity. Do not lift over people.***

For information about rubber, see page 3526.

Edge-Grip Seals

Simply push these seals onto an edge to stop wind, dust, and water from entering doors. They fit a specific edge thickness, but also can conform to curved and irregular surfaces. Cut to length with shears or tin snips. Sides without gripping fingers will be flush against your surface. Sealing portion is not rated for hardness.

To Order: Please specify 10-, 25-, 50-, or 100-ft. continuous length.

EPDM Seals with Vinyl Grip—These seals have good weather resistance. Gripping portion is made of PVC with individual aluminum clips (unless noted) inside to ensure a permanent, secure grip. Bulbs are EPDM closed-cell foam rubber. Temperature range is –20° to +150° F. Color is black.

Silicone Seals—Turn to these seals when you need resistance to high temperatures. Made of dense silicone rubber. Secure with staples or nails (not included). Temperature range is –60° to +350° F. Color is orange-red for Style 5; gray for Style 6.

★ Has gripping fingers on both sides. ■ Clips are steel.

For information about rubber, see page 3526.

Adjustable Edge-Grip Seals

These edge-grip seals can fit a range of edge thicknesses to stop wind, dust, and water from entering doors. Seals also conform to curved and irregular surfaces. To install, cut to length with shears or tin snips and press onto edge. The greater the number of gripping fingers, the greater the seal's holding power. Sides without gripping fingers will be flush against your surface. Sealing portion is not rated for hardness.

EPDM Seals— Pick these for their good weather resistance. Gripping portion is EPDM rubber and bulb is EPDM closed-cell foam rubber. All have a steel core. Temperature range is –40° to +248° F. Color is black. Style 18 meets UL 94HB.

Buna-N Seals— All resist oil and grease. Gripping portion is Buna-N rubber; bulb is Buna-N closed-cell foam rubber. Seals have a steel core. Temperature range is –22° to +212° F. Color is black.

Silicone Seal— Good for higher temperature applications, this silicone rubber seal withstands temperatures of –60° to +350° F. Secure with staples or nails (not included). Color is orange-red.

To Order: Please specify length from those listed below. The last length listed is the maximum continuous length.

♦ Has no ridges on the top of the bulb. ♣ Has three gripping fingers on longest side.
■ Push-in style. Seal fits in the gap between two metal sheets.
▲ Has no gripping fingers on side closest to bulb.

For information about rubber and durometer scales, see page 3526.

Glass-Locking Edge-Grip Seals

Locking Gasket Tool Set

By pushing the bottom end onto an edge and inserting glass into the top portion, this EPDM seal locks into place to secure gaps between glass and metal. Temperature range is –20° to +158° F. Durometer hardness is A70.

To install, lubricate with soap and water. Tape in place as glass is inserted. For easier installation, work into position with the set of locking gasket tools (sold separately).

To Order: Please specify 5-, 10-, 25-, 50-, or 100-ft. continuous length.

Fits Edge	O'all Ht. (A)	Fits Glass (B)	Clearance Between Glass and Edge (C)		Per Ft. 1-99	100-Up

Optional 2-Pc. Locking Gasket Tool Set				3275T44	Each	$57.28

Fire-Rated Adhesive-Backed Rubber Bulb Seals

Tested in accordance with NFPA (National Fire Protection Association) standards 105 and 252, these silicone seals also meet ASTM E283, E90, and E413. UL classified for use on hollow metal and steel-covered composite-style fire doors rated up to and including three hours, as well as wood-covered composite and wood core-style fire doors rated up to and including 1½ hours. Meet UL 10B, UL 10C, and UL 1784.

Cut to length with scissors or a knife. Temperature range of silicone is –100° to +550° F; acrylic adhesive has a temperature range of –40° to +250° F. For best adhesion results, install above 50° F. Durometer hardness is A70-A80.

To Order: Please specify 10-, 25-, 100-, or 300-ft. continuous length and color: brown, charcoal, or white.

O'all Wd. (A)	O'all Ht. (B)		Per Ft. 1-299	300-Up
1/2"	1/4"	1067A3	$1.28	$0.95

Rubber Bulb Seals

Use where a tight seal is needed. Cut to length with scissors or a knife. Install plain back with staples, tacks, or screws (not included); silicone-based adhesive can also be used for plain-back silicone.

EPDM Seals—Good resistance to weathering. Durometer hardness is A70, unless noted. Temperature range is –30° to +200° F. Color is black.

Silicone Seals—Good resistance to high temperatures. Color is orange/red. *Plain back* has a durometer hardness of A50 and a temperature range of –60° to +350° F. *Adhesive backed* has a durometer hardness of A60 and a temperature range of –100° to +500° F; acrylic adhesive has a max. temperature of 250° F.

Viton® Fluoroelastomer Seals—Resist acids. Durometer hardness is A75. Temperature range is –20° to +450° F. Color is black. Meets MIL-R-83248.

Vinyl Seals—Resist water. Durometer hardness is A73. Temperature range is –30° to +150° F. Color is gray. Meets UL 94HB for flammability.

To Order: Please specify length from those listed below. The last length listed is the maximum continuous length.

▲ Durometer hardness is A65. ★ Durometer hardness is A60.

For information about rubber and durometer scales, see page 3526.

Foam Rubber Bulb Seals

Foam rubber makes these seals softer than rubber bulb seals (shown on previous page) to create an easier-to-close seal against dust, noise, and vibration. All seals are water resistant. Cut to length with scissors or a knife.

Silicone Seals—Have good resistance to high temperatures, with a temp. range of –60° to +400° F. *Plain back* is installed with fasteners, or a silicone- or acrylic-based adhesive (not included). Color is orange/red. *Adhesive backed* has an acrylic adhesive with a max. temp. of 250° F. Color is light gray.

EPDM Seals—Have good weather resistance. Adhesive is acrylic for 93085K seals and silicone for all others. Temperature range for rubber and adhesive is –4° to +140° F. Color is black, unless noted.

To Order: Please specify length from those listed below. The last length listed is the maximum continuous length.

■ Mounting base is dense EPDM. ♣ Color is white. ♦ Color is brown.

Magnet-Grip Vinyl Seals

The magnets in these replacement seals hold freezer, refrigerator, and other metal doors closed. Each kit contains four L-shaped vinyl seal sections with welded corners, plus a coil of flexible magnet. Use scissors or a knife to cut seal and magnet to your door dimensions; then insert magnet in seal. Replacement seals do not need to look the same as your existing seal to fit your application. Seals resist water and detergents. Durometer hardness is A73. Temperature range is –30° to +150° F. Color is gray.

Screw-in seals install with screws (not included). ***Push-in*** seals have a point that inserts into a retainer strip—no screws necessary.

Adhesive (sold separately) can be used to adhere cut ends. Supplied in a 4-oz. brush-top can.

High-Temperature Rope Seals

Use these seals on oven, furnace, and boiler doors. Also for use on kettles and tanks. They resist grease, oil, alcohol, and solvents. Cut to length with scissors or a knife. Install seals with adhesive, staples, tacks, or screws (not included). Not rated for pressure.

Fiberglass Seals

Flexible and compressible enough to conform to uneven surfaces. They also resist alkalies, water, steam, detergents, and bleaches. Color is white.

(1) Tightly Braided— Maximum temperature is 1000° F. Not rated for minimum temperature.

(2) Loosely Knitted— Even more flexible than tightly braided seals. Temperature range is –70° to +1400° F.

To Order: Please specify length from those listed below. The last length listed is the maximum continuous length.

Dia.	Available Lengths, ft.		Per Ft. 1-49	50-Up

Silica Seals

Silica has the flexibility of fiberglass, plus a higher temperature rating. Color is white.

(3) Round Braided— Made of 99% silica. Temperature range is –100° to +2300° F.

(4) Square Braided— Made of 98.8% silica. The square design fits many oven and furnace door grooves and provides more sealing surface than round braided. Temperature range is –40° to +2300° F.

To Order: Please specify length from those listed below. The last length listed is the maximum continuous length.

Size	Available Lengths, ft.		Per Ft. 1-24	25-Up

Ceramic Seals

These seals resist cold better than any rope seal we offer, while still withstanding high temperatures. Lighter and more flexible than fiberglass, these seals won't burn and they resist molten metal splashing. Seals resist alkalies, water, steam, detergents, ammonia, bleaches, hydraulic fluid, and most acids (not hydrofluoric and phosphoric). Meet MIL-I-24244B. Color is white.

(5) Tightly Braided— Made from woven calcium alumina silicate. Temperature range is –300° to +1100° F.

(6) Loosely Twisted— Made from woven alumina silicate. A high alumina content adds strength, flexibility, and temperature resistance. Often used to tie products together for high-temperature processing. Temperature range is –300° to +2300° F.

To Order: Please specify 5-, 10-, or 25-ft. length.

Dia.		Each 5 ft.	10 ft.	25 ft.

1″	88285K6	61.73	104.73	204.98

Slotted Fiberglass Seals

Also known as drop warp and bolt hole tape. The center of these seals has an opening between the weave to accommodate bolts and rivets. They resist grease, oil, hydraulic fluid, and solvents. Use on metal flanges as well as oven, furnace, and boiler doors. Cut to length with scissors or a knife. Maximum temperature is 1000° F, except *adhesive backed* has an acrylic adhesive with a maximum temperature of 150° F. Not rated for minimum temperature. Not rated for pressure. Color is white. *Plain back* is flame resistant and will not rot or mildew.

Tightly Woven— Are stronger than loosely knitted seals and will fray less over time.

Loosely Knitted— Are more flexible and conformable than tightly woven seals.

Foam Flange-Mount Seals

A tough yet flexible vinyl cover over a foam rubber core lets these seals bend easily around corners and fit into tight recesses. All resist water, detergents, and salt. Cut to length with scissors or a knife. Install with staples, tacks, or screws (not included). Temp. range is –30° to +150° F. Durometer hardness is A73.

Sold in continuous lengths of 1, 5, 10, 25, 50, and 100 feet.

To Order: Please specify length.

EMI/RFI Shielding Flange-Mount Seals

Protect equipment from electromagnetic (EMI) and radio frequency (RFI) interference. Seals consist of wire mesh knitted from tin-plated, copper-clad steel. Flange is closed-cell black neoprene foam. Cut to length with scissors. Flange allows for easy installation with adhesive or screws (not included). Not rated for chemical resistance, temperature, or pressure. Wire mesh meets ASTM B520.

Wd. x Thick.	12½-ft. Length	Each	25-ft. Length	Each
½″ x ⅛″	93205K16	$53.12	93205K15	$93.89

High-Temperature Flange-Mount Seals

Press-fit these seals into place—they're flexible, compressible, and conformable so you can position the flange to fit your application. Use on oven, furnace, and boiler doors. Cut to length with scissors or a knife. The flange allows easy installation with adhesive (except PTFE-coated seals), staples, tacks, or screws (not included).

Fiberglass Cover with Fiberglass Core—Withstands higher temperatures than expanded-PTFE and rubber seals. Seals are flame retardant and resist alkalies, salts, grease, oil, detergents, and some acids. Also excellent for caulking and filling expansion joints. Temperature range is –40° to +1000° F. Color is white.

Silicone-Coated Fiberglass Cover with Stainless Steel Spring Core—Coating sheds sparks and molten metal splash to provide extra protection. Seals have a hollow Type 304 stainless steel spring core that recovers well when pressure is relieved. All resist water, steam, grease, oil, detergents, ammonia, and bleaches. Temperature range is –60° to +450° F. Color is red.

PTFE-Coated Fiberglass Cover with Fiberglass Core—Coating is slippery and provides added chemical resistance. Seals resist alkalies, salts, water, steam, grease, oil, detergents, ammonia, bleaches, hydraulic fluid, alcohol, solvents, and some acids. Temperature range is –40° to +500° F. Color is white.

Silica Cover with Inconel Mesh Core—Cover is 98% silica and woven from special yarns treated to withstand extremely high heat. Seals resist alkalies, water, steam, grease, detergents, ammonia, bleaches, and hydraulic fluid. Temperature range is –40° to +2300° F. Color is tan.

Expanded-PTFE Cover with Fiberglass Core—Seals resist alkalies, water, steam, grease, oil, detergents, ammonia, and some acids. Temperature range is –40° to +500° F. Color is white.

Ceramic Cover with Inconel Core—Offers higher temperature resistance than fiberglass seals. Seals have an Inconel insert for added strength. Seals resist alkalies, water, steam, grease, oil, detergents, ammonia, bleaches, hydraulic fluid, alcohol, solvents, and most acids. Maximum temperature is 1700° F. Not rated for minimum temperature. Color is white.

To Order: Please specify length from those listed below. The last length listed is the maximum continuous length.

Gaskets, Joint Sealant & Gasket Tape

For gasket cutters, see pages 2340-2341.

Looking for a different shape of gasket? Just tell us what you need and we'll get it for you.

All-Purpose Gaskets

Made of aramid fibers with a Buna-N binder, these gaskets resist water, oil, gasoline, and grease. Temperature range is –40° to +400° F. All meet ASTM F104.

Sheet Gaskets— Die cut or cut with a gasket cutter. Maximum pressure is 1,000 psi for *blue gaskets* and 1,400 psi for *green gaskets*.

Flange Gaskets— Maximum pressure is 1,000 psi. Color is blue. *Ring gaskets* cover the section of the flange just inside the bolt holes.

Ring Flange Gaskets with Fasteners— Everything you need to seal steel flanges, packed in a convenient kit. Each kit contains one green gasket, plus Grade 2 hex head bolts and nuts (ASTM A307) in the quantity listed below. Gasket is ring style without holes, so it covers the section of the flange just inside the bolt holes. Maximum pressure is 725 psi.

Expanded-PTFE Joint Sealant

This adhesive-backed joint sealant can be used on most types of flanges, especially large, damaged, and complex ones. Chemically inert except for molten alkali metals and elemental fluorine. Color is white. Cut with a utility knife.

Gore— The original expanded-PTFE joint sealant. Temperature range is –450° to +600° F. Maximum pressure is 3,000 psi.

Value Seal— The economical choice. Temperature range is –450° to +500° F. Maximum pressure is 2,900 psi. FDA compliant.

Expanded-PTFE Gasket Tape

You can shape this super-thin adhesive-backed expanded-PTFE tape for use as a flange gasket. Works well on flat and narrow surfaces. It's noncontaminating and resists alkalies (excluding molten alkali metals and elemental fluorine), acids, salts, water, steam, grease, oil, and detergents. Temperature range is –450° to +600° F. Color is white. Cut with a utility knife.

Gore— This industry favorite maintains a high level of tightness over time. It seals surface irregularities with a depth of up to ⅓ the tape's thickness. Maximum pressure is 3,000 psi.

Value Seal— An economical alternative. Max. pressure is 2,900 psi. FDA compliant.

For gasket cutters, see pages 2340-2341. For information about rubber, see page 3526.

Corrosion-Resistant PTFE Gaskets

Made of 100% pure virgin PTFE, these gaskets are tough and chemically inert. They resist acids, alkalies (except molten alkali metals and elemental fluorine), salts, water, steam, grease, oil, and detergents. Color is white. FDA compliant. All except *ring flange gaskets with stainless steel insert* meet MIL-P-22241 and ASTM D3308.

Sheet Gaskets— Cut with a utility knife. Temperature range is –350° to +500° F. Maximum pressure is 3,000 psi.

Ring Flange Gaskets— These gaskets are ring style without holes, so they cover the section of the flange just inside the bolt holes. Temperature range is –350° to +500° F. Maximum pressure is 3,000 psi.

Ring Flange Gaskets with Type 304 Stainless Steel Insert— A perforated insert adds strength and makes these reusable. Style is without holes, so rings cover the section of the flange just inside the bolt holes. Temperature range is –300° to +400° F. Maximum pressure is 500 psi.

Gasket Assortments

You'll get 14 sheets of various gasketing materials (SBR rubber, cork and rubber blend, vegetable fiber, and reinforced SBR rubber with a cloth insert) in one handy assortment. Temperature range for all materials is –16° to +175° F, except vegetable fiber, which has a maximum temperature of 249° F and is not rated for low end temperature use. Maximum pressure is not rated. Cut with scissors.

Material	Thick.	Color	Sheets/Assortment
SBR Rubber	1/16"	Red	3
SBR Rubber	1/8"	Red	2
Cork and Rubber Blend	1/16"	Tan	2
Cork and Rubber Blend	1/8"	Tan	2
Vegetable Fiber	1/16"	Brown/Tan	3
Reinforced SBR Rubber	1/8"	Black	2

Size		Per Pkg.
6"× 6"	9476K12	$24.26
12"×12"	9476K14	57.44

High-Strength Glass-Filled PTFE Gaskets

This material requires less pressure to create a seal and is glass-filled for improved performance over PTFE. Gaskets resist salts, water, grease, oil, some acids, and some detergents. Temp. range is –450° to +500° F. Maximum pressure is 800 psi. Color is blue.

Sheet Gaskets— Die cut or cut with a utility knife.

Flange Gaskets— *Ring gaskets* cover the section of the flange just inside the bolt holes.

Gaskets for Steam Applications

Made of aramid fibers for strength, with an SBR rubber binder so it can be used with saturated steam. Resist water, as well as some detergents, acids, alkalies, and oils. Temperature range is –40° to +400° F. Maximum pressure is 1,200 psi. Color is off-white. Meet MIL-G-24696B.

Sheet Gaskets— Cut with a utility knife.

Flange Gaskets— *Ring gaskets* cover the section of the flange just inside the bolt holes.

For gasket cutters, see pages 2340-2341.

Looking for a different shape of gasket? Just tell us what you need and we'll get it for you.

Corrosion-Resistant Compressible Expanded-PTFE Gaskets

Made of 100% expanded-PTFE for greater compressibility than PTFE, these gaskets resist acids and alkalies (except molten alkali metals and elemental fluorine), salts, water, steam, grease, oil, and detergents. Temperature range is –450° to +600° F. Maximum pressure is 3,000 psi, except for low-pressure gaskets, which have a maximum pressure of 1,000 psi. Color is white. *Value Seal gaskets* are FDA compliant. *Bend-resistant gaskets* hold their shape better with larger flange sizes. Use *low-pressure gaskets* to seal fragile pipe flanges with low bolt loads.

Flange Gaskets—*Ring gaskets* cover the section of the flange just inside the bolt holes.

Sheet Gaskets—Cut with a gasket cutter or utility knife. Use the 1/16″ thick gaskets on smooth surfaces and 1/8″ thick on moderate to rough surfaces.

High-Temperature Carbon and Graphite Gaskets

All gaskets have a Buna-N binder and resist water, steam, grease, detergents, gasoline, some oils, and most refrigerants. Temperature range is –40° to +650° F. Maximum pressure is 2,000 psi.

Carbon/Buna-N gaskets are black.

Graphite/Buna-N gaskets are American Bureau of Shipping fire safe approved. Color is mahogany (reddish-brown).

Sheet Gaskets— Cut with a utility knife.

Flange Gaskets— *Ring gaskets* cover the section of the flange just inside the bolt holes.

Extreme-Temperature Compressible Graphite Gaskets

The absence of a binder enables these gaskets to withstand temperatures of –400° to +850° F. Use in high-temperature, high-pressure applications. Gaskets resist acids (except nitric and sulfuric), alkalies, salts, water, steam, grease, oil, and detergents. Color is dark gray. *Sheet gaskets* can be die cut or cut with scissors or a utility knife, except *sheets with Type 316 stainless steel* insert are die cut only.

Sheets with No Insert— Maximum pressure is 2,000 psi. Meet ASTM F104.

Sheets with Type 316 Stainless Steel Wire Insert— Insert provides rigidity, additional strength, and resistance to damage during handling and installation. Maximum pressure is 10,000 psi. Meet ASTM F104.

Sheets and Flange Gaskets with Type 316 Stainless Steel Insert— A 0.004" thick perforated insert for sheets and a 0.002" thick wire insert for flange gaskets provides added strength. Maximum pressure is not rated for sheets and is 5,000 psi for flange gaskets. *Sheets* meet ASTM F104. *Ring gaskets* cover the section of the flange just inside the bolt holes.

Looking for a different shape of gasket? Just tell us what you need and we'll get it for you.

Copper Ring Flange Gaskets

Solid

Corrugated

Simple, one-piece construction makes these gaskets more durable than the metal-reinforced gaskets on this page. Made of electrically conductive alloy 110 copper, they resist water, grease, oil, and detergents. Maximum temperature is 600° F; low end not rated. For copper sheets, see pages 3715-3717.

Solid copper gaskets are good for higher pressure applications. Thickness is 1/16″. Maximum pressure is 1,500 psi.

Corrugated copper gaskets compensate for flange movement. Thickness is 1/32″. Maximum pressure is 500 psi.

For Pipe Size	ID	OD	Solid	Solid Each	Corrugated	Corrugated Each

Metal-Faced Gaskets

Formed by laminating a vermiculite core with carbon steel, these metal-faced gaskets are used for very high temperature applications such as engine exhaust gaskets and heat shields. Die cut or cut with shears. Maximum temperature is 1800° F; low end not rated. Maximum pressure is not rated. Color is silver.

Size	0.042″ Thick	0.042″ Thick Each	0.064″ Thick	0.064″ Thick Each
7 3/4″ × 45″	3572T11	$19.94	3572T13	$26.62
24″ × 45″	3572T12	46.19	3572T14	61.49

Ultra-Temperature Gaskets

Made from high-alumina ceramic fibers, use these for their outstanding heat resistance—up to 2600° F. Maintain flexibility at high temperatures. Both resist acids, alkalies, salts, water, steam, grease, oil, and detergents. Cut with scissors. Not rated for pressure. Color is off-white. Meet MIL-I-24244B.

Size	Thick.		Each
12″ × 12″	0.060″	1687T21	$183.59
12″ × 36″	0.060″	1687T22	522.20

Metal-Reinforced Ring Flange Gaskets

Also known as spiral-wound gaskets. The primarily metal construction of these ring flange gaskets allows them to compensate for flange movement resulting from vibration, pressure, and chemical variations. Gaskets resist salt, water, grease, oil, detergents, some acids, and most alkalies. The sealing element consists of a 0.175″ wide Type 304 stainless steel strip spiral wound with a filler. The outer ring is 1/8″ thick carbon steel. Gaskets are not rated for pressure.

Standard Gaskets

Mica graphite is an economical filler good for less severe applications. Temperature range is –40° to +450° F.

Pure graphite is a filler with a wide temperature range of –400° to +850° F.

When acids and corrosives won't work with graphite, ***PTFE*** filler is perfect. Temp. range is –450° to +450° F.

Premium Gaskets

This ring has an inner wrap construction—the sealing element isn't directly connected to the outer ring. This prevents the flexible graphite filler from being squeezed inward and contaminating the process stream. Temperature range is –400° to +950° F.

Water-Resistant Vegetable Fiber Gaskets

Fibers are impregnated with a compound that seals them against water and oil. Temperature range is –20° to +250° F. Maximum pressure is 300 psi. Color is tan. Cut with scissors or a utility knife. Meet MIL-G-12803 and ASTM D1170-62.

For gasket cutters, see pages 2340-2341. For information about rubber, see page 3526.

Resilient Rubber Gaskets

All gaskets resist salts, water, and deformation after compression. Meet ASTM D2000. Cut *sheet gaskets* with scissors or a utility knife. *Ring flange gaskets* cover the section of flange just inside the bolt holes.

***SBR*—**Use this rubber when dealing with low-pressure applications. Temperature range is –20° to +170°F. Maximum pressure is 800 psi. Durometer hardness is A75. Color is red.

***Buna-N*—**Ideal for oil applications. Also resists alkalies and detergents. Temperature range is –20° to +170°F. Maximum pressure is 1,000 psi. Durometer hardness is A60. Color is black, except *FDA Buna-N* is off-white.

***Neoprene*—**Resists detergents. Temp. range is –20° to +170°F. Maximum pressure is 1,000 psi. Color is black. Durometer hardness is A70 for *neoprene* and not rated for *reinforced neoprene*. *Neoprene* meets MIL-R-3065; *reinforced neoprene* has a nylon insert.

***Gum*—**When the pressure is on, this material can withstand up to 2,500 psi. Also resists detergents and steam. Temperature range is –20° to +160°F. Durometer hardness is A40. Color is tan.

***Viton® Fluoroelastomer*—**Has better chemical resistance than other rubbers. Resists grease, oil, detergents, and some acids. Durometer hardness is A75. Temperature range is –20° to +400°F for *Viton®* and *FDA Viton®*, –40° to +400°F for *low-temperature Viton®*, and 0° to 400°F for *chemical-resistant Viton®* (also known as Viton® ETP). Maximum pressure is 1,000 psi for *Viton®*; not rated for all other types of Viton®. Color is black, except *FDA Viton®* is white.

***Silicone*—**A broad temperature range of –70° to +500°F makes silicone great for use in high-temperature applications. Also resists alkalies, acids, detergents, and steam. Maximum pressure is 1,000 psi. Durometer hardness is A60. Color is red.

Compressible Cork Gaskets

Multipurpose cork is great for gaskets and bulletin boards. Material is highly compressible in low-pressure applications. It is also flexible, allowing it to conform to curved shapes.

All resist alkalies, acids, salts, water, grease, oil, and detergents. Temperature range is –20° to +180°F. Maximum pressure is 55 psi. Color is tan/light brown. Cut with a utility knife.

Sheet & Flange Gaskets

For gasket cutters, see pages 2340-2341.

Looking for a different shape of gasket? Just tell us what you need and we'll get it for you.

Blended Rubber Gaskets

Gaskets have a maximum pressure of 1,000 psi. Not rated for durometer hardness. Meet ASTM F104. Cut with scissors.

High Temperature— This blend of fillers (with some organic fiber) has an acrylic-nitrile-latex binder. Resists water, grease, and oils. Maximum temperature is 450° F; low end not rated. Color is gray.

Paper Fiber— Made of recycled material with an SBR binder, it resists water and grease. Has some resistance to oils. Maximum temperature is 350° F; low end not rated. Color is gray.

	HIGH TEMPERATURE						PAPER FIBER

18″×36″	—	—	—	—	—	—	9556K87	3.71	9556K88	5.17	9556K89	8.87

Sheet Gasket Assortment— Includes four 12″×36″ sheets: one 1/32″ thick high-temperature gasket, one each of the 1/64″ and 1/32″ thick paper fiber gaskets, and one 1/16″ thick cork gasket blended with Buna-N to resist fuels and most solvents (similar to those shown on this page). Cork/Buna-N has a temperature range of 0° to 250° F, is not rated for pressure, meets ASTM F104, and is brown in color. Cut with scissors.

9304K42 ..... **Per Pkg.** $17.90

Compressible Oil-Resistant Cork/Rubber Gaskets

Cork granules blended with neoprene or Buna-N rubber give these gaskets compressibility similar to that of natural cork. Not rated for pressure. Cut with scissors. *Strips* are tan/black; *sheets* are light brown/black and meet SAE-AMS-C-6183.

Neoprene blend has greater oil resistance than cork. Temperature range of cork is –22° to +248° F; temperature range of acrylic adhesive is 0° to 200° F.

Buna-N blend resists oil and aromatic fuel. Temperature range is –22° to +248° F.

Sticky Silicone Gel Gaskets

Made of inherently sticky silicone, gaskets conform to irregular shapes for an effective barrier against corrosion and moisture. They compress approximately 20% of their total thickness and are good in low-pressure applications. They resist alkalies, acids, salts, water, compression set, grease, oil, detergents, and steam. Temperature range is –40° to +257° F. Color is blue. Cut with scissors.

Gel— Material is self-repairing and sticky on both sides.

Gel with Foam Back— The open-celled polyurethane foam allows the gel to squeeze through, making it sticky on only one side and creating a seal when pressure is applied. When pressure is removed, the gel retracts for a clean release.

Sheets

		Gel		Gel w/Foam Back	
Thick.	Size		Each		Each
0.030″	9″×9″	2750K61	$51.60	2750K81	$44.91

Leather Gaskets

Our pliable, vegetable-tanned leather gaskets hold up against wear and abrasion. They resist salts, water, compression set, grease, oil, detergents, and some alkalies. Temperature range is 0° to 150° F. Maximum pressure is 500 psi. Color is natural tan. Cut with scissors. Size of 36″×84″ sheets is approximate.

Full Face Flange Gasket Kits for Dissimilar Metals

Prevent corrosion when joining flanges of dissimilar dielectric metals by isolating components, eliminating metal-to-metal contact. Good for water and oil lines. Kits include a 1/8″ thick full face Buna-N coated phenolic gasket that's sized to fit Class 150 ANSI flanges. Color of gasket is black. They also contain one full-length polyethylene sleeve per bolt hole, plus two phenolic and two zinc-plated metal washers per bolt hole. Max. temp. is 175° F. Max. pressure is 455 psi. Bolts not included.

Gaskets for Sanitary Tube Fittings

Place between stainless steel sanitary tube fittings for a leak-free seal. Gasket ID is the same as the tube ID for unobstructed flow. Not rated for pressure. Meet 3-A sanitary standards and are USDA compliant.

For Quick-Clamp (Tri-Clamp) Fittings— Gaskets have a compressible ridge on both faces. When tightened, ridges compact to help form a seal. For fittings, see pages 208-211.

For Threaded Bevel-Seat Fittings— Each face has a bevel that fits into the beveled edge of the fittings. For fittings, see 44575K on page 210.

Buna-N is primarily used with some oils and fats in food processing. Temperature range is –30° to +200° F. Color is black. ***PTFE*** offers the broadest temperature range at –100° to +500° F. Good for nonstick and high-temperature applications. Color is white. ***Silicone*** is great for use with food, pharmaceutical applications, and high-purity water systems. Temperature range is –40° to +450° F. Color is clear. ***Fluoroelastomer*** is good for steam applications. Temperature range is –20° to +400° F. Color is black.

Gaskets for Boilers and Access Covers

Bust a gasket? Here are some excellent replacement gaskets for handhole and manhole covers as well as industrial boilers and access covers.

EPDM Rubber— Flexible enough to form a tight seal. Resists salts, water, steam, and detergents, as well as some acids, alkalies, and oils. Thickness is ¼″. Temperature range is –55° to +380° F. Maximum pressure is 180 psi. Color is black.

Wire-Inserted Fiberglass/Rubber— This woven fiberglass is reinforced with brass wire and coated with natural rubber to provide conformability and strength. Resists diluted alkalies and diluted acids. Thickness is ¼″. Temperature range is –20° to +400° F. Maximum pressure is 180 psi. Color is off-white.

Loaded Bidirectional Seals

Excellent for light- and medium-duty applications that require positive sealing in both directions. These seals are made of rigid PTFE or urethane to prevent rolling or twisting, and they include a black Buna-N O-ring for support. Resist grease, oil, and hydraulic fluids. Maximum pressure is 5,000 psi. Temperature range is –22° to +212° F.

PTFE seals are wear resistant for longer life. Color is charcoal.

Urethane seals have a ridge that traps lubricant to reduce friction and wear. Color is yellow.

Cartridge-Mounted Shaft Seals

Replace two-part rotary/stationary seals on centrifugal pumps with these cartridge-mounted seals. They consist of a Type 316 stainless steel body, carbon-graphite and silicon carbide seal faces, and Aflas O-rings. Internal springs maintain evenly-distributed pressure on both seal faces to prevent leaks, keep out debris, and reduce friction and wear. Aflas has a durometer hardness of A75. Temp. range is –20° to +400° F. For pressures up to 350 psi and speeds up to 5,000 fpm. Furnished with an installation kit that includes a wrench, hex keys, and lubricant.

★Refers to a material's ability to return to its original size and shape after it's been compressed.

Don't see the O-ring you need? Just tell us what you're looking for and we'll get it for you.

O-Ring Sizing Tools

Quickly identify AS568A dash number O-ring sizes. All tools are plastic.

Gauge— Instantly identifies dash numbers 001 to 050, 102 to 178, 201 to 279, 309 to 382, and 425 to 455. Slip O-ring over the indicator knob and pull gauge out until tight; the appropriate number appears in the window. Length is 24″ when fully extended.

Cones— The base has five slots that fit standard widths (cross sections): 0.070″, 0.103″, 0.139″, 0.210″, and 0.275″. Slip the O-ring into the proper slot to determine the width and which side of the cone to read; then drop the O-ring onto the cone and read the corresponding dash number. *Standard cone* can determine 122 dash numbers for O-rings with 1/4″ to 8″ ID and includes pi tape for measuring larger O-rings. Dash numbers are on a printed label adhered to cone. *Deluxe cone* measures 182 O-ring dash numbers with 5/16″ to 5 5/8″ ID. Dash numbers are permanently molded into steps around the cone for precise identification.

	Size		Each
Gauge	13 1/2″ Lg.	9699K51	$22.22

	Size		Each
Standard Cone	8″ Ht.	9440K41	$35.30
Deluxe Cone	18″ Ht.	9440K42	48.78

Buna-N, Viton® Fluoroelastomer, Silicone, and EPDM O-Rings

Buna-N is used in oil applications. Temperature range is –35° to +250° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black. **Also Available:** Buna-N that meets AS3578. Please ask for 5018T11 and specify AS568A dash number.

Viton® fluoroelastomer resists chemicals and oil. Temperature range is –15° to +400° F. Durometer hardness is A75. Meets ASTM D2000/SAE J200. Color is black. **Also Available:** Viton® ETP fluoroelastomer for greater chemical resistance. Please ask for 2857T11 and specify AS568A dash number.

Silicone has good resistance to low and high temperatures. Temperature range is –65° to +450° F. Durometer hardness is A70. FDA compliant. Color is red-orange.

EPDM is water and steam resistant. Temperature range is –65° to +212° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black.

(Continued on following page)

Don't see the O-ring you need? Just tell us what you're looking for and we'll get it for you.

Buna-N, Viton® Fluoroelastomer, Silicone, and EPDM O-Rings *(Cont. from previous page)*

Buna-N is used in oil applications. Temperature range is –35° to +250° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black. **Also Available:** Buna-N that meets AS3578. Please ask for 5018T11 and specify AS568A dash number.

Viton® fluoroelastomer resists chemicals and oil. Temperature range is –15° to +400° F. Durometer hardness is A75. Meets ASTM D2000/SAE J200. Color is black. **Also Available:** Viton® ETP fluoroelastomer for greater chemical resistance. Please ask for 2857T11 and specify AS568A dash number.

Silicone has good resistance to low and high temperatures. Temperature range is –65° to +450° F. Durometer hardness is A70. FDA compliant. Color is red-orange.

EPDM is water and steam resistant. Temperature range is –65° to +212° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black.

Don't see the O-ring you need? Just tell us what you're looking for and we'll get it for you.

Buna-N, Viton® Fluoroelastomer, Silicone, and EPDM O-Rings *(Cont. from previous page)*

Buna-N is used in oil applications. Temperature range is –35° to +250° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black. **Also Available:** Buna-N that meets AS3578. Please ask for 5018T11 and specify AS568A dash number.

Viton® fluoroelastomer resists chemicals and oil. Temperature range is –15° to +400° F. Durometer hardness is A75. Meets ASTM D2000/SAE J200. Color is black. **Also Available:** Viton® ETP fluoroelastomer for greater chemical resistance. Please ask for 2857T11 and specify AS568A dash number.

Silicone has good resistance to low and high temperatures. Temperature range is –65° to +450° F. Durometer hardness is A70. FDA compliant. Color is red-orange.

EPDM is water and steam resistant. Temperature range is –65° to +212° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black.

For information about O-ring materials, see page 3482. For O-ring dimensions, see pages 3482-3487.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Don't see the O-ring you need? Just tell us what you're looking for and we'll get it for you.

O-Ring Assortments

382-Pc. Assortment

Furnished in a plastic case, unless otherwise noted.

Viton® fluoroelastomer is used in applications requiring chemical and oil resistance. Temperature range is –15° to +400° F. Durometer hardness is A75. Meets ASTM D2000/SAE J200. Color is black, unless noted.

Buna-N is used in oil applications. Temperature range is –30° to +250° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black.

Silicone has good temperature resistance, with a range of –65° to +400° F. Durometer hardness is A70. FDA compliant. Color is red-orange.

EPDM is water and steam resistant. Temperature range is –65° to +212° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black.

O-Rings for Straight Thread Tube Fittings

Also known as boss O-rings, use these as replacement O-rings for SAE high-pressure straight thread tube fittings.

Buna-N is used in oil applications. Temperature range is –30° to +250° F. Durometer hardness is A90. Meets ASTM D2000/SAE J200. Color is black.

Viton® fluoroelastomer is used in applications requiring chemical and oil resistance. Temperature range is –15° to +400° F. Durometer hardness is A90. Meets ASTM D2000/SAE J200. Color is black.

Silicone has good temperature resistance, with a range of –65° to +450° F. Durometer hardness is A70. FDA compliant. Color is red-orange.

EPDM is water and steam resistant. Temperature range is –65° to +212° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black.

212-Pc. Buna-N and Viton® Fluoroelastomer Assortments for Straight Thread Tube Fittings—20 Sizes

Furnished in a plastic case.

AS568A Dash No.	Qty.	AS568A Dash No.	Qty.
901-904	10	911-914	10
905-910	12	916, 918, 920, 924, 928, 932	10

Buna-N ..... **9749K29** **Each** $25.30
Viton® Fluoroelastomer..... **9749K39** **Each** $99.59

For information about O-ring materials, see page 3482. For O-ring dimensions, see pages 3482-3487.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Hard O-Rings

Increased hardness provides enhanced abrasion resistance and makes these O-rings better suited for higher pressure applications. Durometer hardness is A90. Meet ASTM D2000/SAE J200. Color is black.

Buna-N—Use in oil applications. Temperature range is –25° to +250° F.

Viton® Fluoroelastomer—Offers excellent chemical and oil resistance. Temperature range is 5° to 390° F.

Also Available: Additional sizes. For Buna-N, ask for 5308T3; for Viton® fluoroelastomer, ask for 8297T101. Please specify AS568A dash number.

Military Specification O-Rings

Viton® Fluoroelastomer—Meets MIL-R-83248C and ASTM D2000/SAE J200. Offers excellent chemical and oil resistance. Temperature range is –15° to +400° F. Durometer hardness is A75. Color is black.

Fluorosilicone—Meets MIL-R-25988 and ASTM D2000/SAE J200. Resists petroleum fluids. Temperature range is –75° to +400° F. Durometer hardness is A70. Color is blue.

Also Available: Additional sizes. For Viton® fluoroelastomer, ask for 1201T111; for fluorosilicone, ask for 8333T11. Please specify AS568A dash number.

MIL-P-83461	–65° to +275° F	A70	Black	4679T11

Soft Buna-N O-Rings

You'll soften up to these O-rings—they have a durometer hardness of A50, giving them better sealability. Temperature range is –40° to +250° F. Meet ASTM D2000/SAE J200. Color is black.

Also Available: Additional sizes. Please ask for 2418T55 and specify AS568A dash number.

High-Temperature Buna-N O-Rings

Also known as HNBR (Hydrogenated Nitrile Butadiene Rubber), this material is saturated with hydrogen to improve resistance to heat and ozone. They resist oil like Buna-N, but have an expanded temperature range of –40° to +300° F. Durometer hardness is A70. Meet ASTM D2000/SAE J200. Color is green for easy identification.

Also Available: Additional sizes. Please ask for 1884T88 and specify AS568A dash number.

Brown Viton® Fluoroelastomer O-Rings

With the same excellent chemical and oil resistance as Viton® fluoroelastomer O-rings, these O-rings are also brown for easier material identification. Temperature range is –15° to +400° F. Durometer hardness is A75. Meet ASTM D2000/SAE J200.

Also Available: Additional sizes. Please ask for 5267T2 and specify AS568A dash number.

For information about O-ring materials, see page 3482.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Don't see the O-ring you need? Just tell us what you're looking for and we'll get it for you.

Metric O-Rings

Buna-N is used in oil applications. Temperature range is –35° to +250° F. Durometer hardness is A70. Meets ASTM D2000/SAE J200. Color is black.

Viton® fluoroelastomer is used in applications requiring chemical and oil resistance. Temperature range is –40° to +400° F. Durometer hardness is A75. Meets ASTM D2000/SAE J200. Color is black.

Also Available: Additional sizes. For Buna-N, ask for 9262K41 and for Viton® fluoroelastomer, ask for 9263K11. Please specify ID and width.

Also Available: Silicone metric O-rings (shown below). Please specify ID and width.

Temp. Range	Durometer	Color	
–60° to +450° F	A70	Red-Orange	5233T111

For information about O-ring materials, see page 3482. For O-ring dimensions, see pages 3482-3487.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Metric O-Ring Assortments

Furnished in a plastic case. All meet ASTM D2000/SAE J200. ***Buna-N*** is used in oil applications. Temperature range is –35° to +250° F. Durometer hardness is A70, unless noted. Color is black. ***Viton® fluoroelastomer*** is used in applications requiring chemical and oil resistance. Temperature range is –15° to +400° F. Durometer hardness is A75. Color is black.

385-Pc. Buna-N—30 Sizes

Durometer hardness is A70 or A90.

FDA-Compliant, NSF-Certified, and UL-Recognized O-Rings

Working with food, water, or gas? We have the O-rings for you. All material meets ASTM D2000/SAE J200.

Buna-N—Temp. range is –35° to +250° F. Durometer hardness is A70. Color is black. *FDA compliant and NSF-certified* O-rings meet ANSI/NSF Standard 61 for water transmission systems. *UL-recognized* O-rings meet JMLU2 and are suitable for use in natural gas, diesel fuel, fuel oil, lubricating oil, and LP gas applications.

Viton® Fluoroelastomer—Good for high-temperature applications. Temp. range is –15° to +400° F. Durometer hardness is A60. Color is white.

Also Available: Additional sizes. For FDA-compliant and NSF-certified Buna-N, ask for 9555K101. For UL-recognized Buna-N, ask for 1879T77. For FDA-compliant Viton® fluoroelastomer, ask for 5577K7. Specify AS568A dash number.

For information about O-ring materials, see page 3482. For O-ring dimensions, see pages 3482-3487.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Don't see the O-ring you need? Just tell us what you're looking for and we'll get it for you.

Hard PTFE O-Rings

In addition to superior lubricity, these O-rings have a durometer hardness of D55 and excellent temperature and chemical resistance. Temperature range is –100° to +500° F. Color is white. **Also Available:** Additional sizes. Please ask for 9559K1 and specify AS568A dash number.

94895K31 ..... **Each** $107.14

Compressible FEP-Encapsulated O-Rings

A pliable FEP exterior combined with a resilient rubber core gives these O-rings excellent compressibility. Perfect for sealing corrosive fluids, the FEP encapsulation also makes them virtually invulnerable to most solvents and chemicals while maintaining the corrosion resistance and slippery surface of PTFE. FEP encapsulation meets ASTM D2116 and LP389A and is FDA compliant.

Silicone—Temperature range is –75° to +400° F. Durometer hardness is A70. O-rings are clear with a red-orange inner ring.

Viton® Fluoroelastomer—Offers even greater chemical resistance than silicone. Temperature range is –15° to +400° F. Durometer hardness is A75. O-rings are clear with a black inner ring.

Also Available: Additional sizes. For silicone, ask for 9319K99; for Viton® fluoroelastomer, ask for 93445K811. Please specify AS568A dash number.

For information about O-ring materials, see page 3482. For O-ring dimensions, see pages 3482-3487.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Polyurethane O-Rings

O-rings stand up to abrasion and tearing. Temperature range is –20° to +180° F. Durometer hardness is A70. Color is black.

Also Available: Additional sizes. For polyurethane, please ask for 9558K51 and specify AS568A dash number.

Kalrez Perfluoroelastomer O-Rings

Kalrez compound 4079 resists nearly all classes of chemicals except some fluorinated solvents. It combines the resilience and sealing force of an elastomer with excellent chemical and temperature resistance similar to that of PTFE. Temperature range is 32° to 600° F. Durometer hardness is A75. Color is black. Each O-ring is individually packaged in a factory-sealed bag.

Also Available: Additional sizes. For compound 4079, please ask for 9568K888 and specify AS568A dash number.

Split Backup Rings

Backup rings improve performance and extend the life of O-rings by supporting them in higher pressure applications. They also help keep the O-ring in place when pressure is high and when there are loose-fitting parts. Use with AS568A O-rings.

PTFE has superior lubricity plus excellent chemical and temperature resistance. Temperature range is –100° to +500° F. Durometer hardness is D55. Color is white.

Also Available: Additional sizes. Please ask for 9560K411 and specify AS568A dash number.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Don't see the O-ring you need? Just tell us what you're looking for and we'll get it for you.

Square Buna-N O-Rings

The square cross section on these rings retains a seal longer than standard O-rings, especially at higher temperatures and pressures. Interchangeable with AS568A O-rings size for size. Buna-N is for use in oil applications. Temperature range is –20° to +225° F. Durometer hardness is A70. Color is black. ***Also Available:*** Additional sizes. Please ask for 4061T11 and specify AS568A dash number.

Double-Seal O-Rings

With four sealing surfaces, you'll get twice the sealing protection as standard O-rings. Also known as Quattro Seals and X-rings, double-seal O-rings are symmetrically designed for sealing on the ID, OD, top, and bottom. This reduces the amount of force needed to create a positive seal, increasing seal life and reducing maintenance. All meet ASTM D2000/SAE J200.

Buna-N is used in oil applications. Temperature range is –40° to +250° F. Durometer hardness is A70. Color is black.

Viton® fluoroelastomer works well in higher temperatures, with a range of –15° to +400° F. Durometer hardness is A75. Color is black.

Also Available: Additional sizes. For Buna-N, ask for 90025K12; for Viton® fluoroelastomer, 6540K101. Please specify AS568A dash number.

Viton® Fluoroelastomer and Silicone O-Ring Cord Joining Kits

Create O-rings on the job. Also known as O-ring vulcanizing kits, these kits join inch and metric Viton® fluoroelastomer and silicone cord stock (see page 3495) while maintaining elasticity and strength. They come with a precision mold made of aluminum and stainless steel that produces an accurate bond in approximately 20 minutes. Kits also include a heater that operates on 120 VAC, five-position die, cutting knife, spatula, glove, marking pen, case, and three sets of a two-part Viton® fluoroelastomer adhesive (mix before use). Silicone adhesive sold separately. ***Inch kit*** includes standard die diameters of 0.070″, 0.103″, 0.139″, 0.210″, and 0.275″. ***Metric kit*** includes standard die diameters of 1.6, 2.4, 3, 4, and 5.7 mm.

		Each
Inch Kit	9450K12	$1,070.27
Metric Kit	9450K16	1,084.93

		Each
Repl. Two-Part Viton® Adhesive (One Set)	9450K32	$25.00
4″×4″ Solid Silicone Adhesive	9450K34	40.32

For information about O-ring materials, see page 3482. For O-ring dimensions, see pages 3482-3487.

For an AS568A dash number O-ring sizing chart, go to mcmaster.com and search for **9452KAC**.

Don't see the cord stock you need? Just tell us what you're looking for and we'll get it for you.

O-Ring and Square Ring Cord Stock

Round Cross Section

Make your own O-rings and O-ring belts from our selection of inch and metric O-ring cord stock. Cord stock can be cut easily with a razor or knife. Maximum continuous length is 100 ft., unless noted.

All materials, except silicone, can be joined with super glues—we recommend 7569A22 on page 3411. To join silicone cord stock, we recommend 74945A69 silicone adhesive on page 3417. For best results, silicone and Viton® fluoroelastomer cord stock should be vulcanized after joining (see joining kits sold separately on previous page). All meet ASTM D2000/SAE J200. Durometer hardness is A70, except Viton® fluoroelastomer is A75.

Buna-N—Use in oil applications. Temperature range is –20° to +212° F. Color is black, except *FDA-compliant Buna-N* is white.

Viton® Fluoroelastomer—Withstands high temperatures and corrosive chemicals. Meets AMS 3216G, unless noted. Temperature range is 0° to 392° F. Color is black.

Silicone—Highly resistant to ozone and weather. Temperature range is –67° to +400° F. Color is red-orange.

EPDM—Has excellent resistance to water and steam. Temperature range is –40° to +212° F. Color is black.

Neoprene—Resists Freon, oils, sunlight, and weather. Temperature range is –40° to +212° F. Color is black.

To Order: For all materials, please specify continuous length: 3, 10, 20, 50, or 100 ft., unless noted. Prices are 15-20% lower if you buy 100 ft. or more of the same size.

O-Ring Cord Splicing Kits

Everything you need to make custom O-rings—cord stock, a splicing jig, a tube of adhesive, and a razor blade. Kits are furnished in a plastic case. Cord lengths are 7 ft. for *inch* and 3 ft. for *metric* and *inch/metric kits*. Durometer is A70, except Viton® fluoroelastomer is A75.

O-Ring Loaded Lip Seals

Also known as polypacks, conventional urethane lip-type seals are supported by a Buna-N O-ring for hydraulic-cylinder sealing at various pressures. Seal lip won't compress on the ID and OD of the seal interface—this prevents leakage at low pressures. Resist grease, oil, and hydraulic fluids. Temperature range is –40° to +200° F. Durometer hardness is A92. Maximum pressure is 5,000 psi. Color is black.

Square profile loaded lip seals are perfect for use as rod and piston seals in light duty hydraulic applications.

Rectangular profile loaded lip seals are also known as Type B seals and are used for rod seal applications. They have beveled lips for increased "squeeze" and sealability, allowing the driest rod possible. Excellent for heavy duty hydraulic applications such as mobile and heavy industrial equipment.

Also Available: Additional sizes. For square profile, ask for 9505K21; for rectangular profile, ask for 9514K14. Please specify ID, OD, width, and height.

U-Cup Seals

Designed for low-pressure pneumatic and hydraulic applications on rod and piston assemblies, Buna-N U-cups seal against the rod gland, piston, and cylinder bore. They resist water, compression set, grease, oil, salt water, hydraulic fluids, and ammonia. Temperature range is –20° to +212° F. Durometer hardness is A70. Maximum pressure is 300 psi. Meet ASTM D2000 and AN6226. Color is black. Package quantity is 5.

Piston Cup Seals

Piston cups seal pistons in hydraulic cylinders and pumps. They're molded from Buna-N and reinforced with cotton duck fabric. Cups seal well under low and high pressures. Resist water, grease, oil, salt water, and hydraulic fluids. Temperature range is –40° to +250° F. Not rated for hardness. Maximum pressure is 3,000 psi. Color is black.

Shaft Wipers

Double Lip

Solid Profile

Prevent contaminants from entering your fluid-power system with these one-piece, snap-in wipers. They scrape moisture, dust, and grit from shafts. They also have great resistance to petroleum-based hydraulic fluids. Color is black.

Double-Lip Buna-N Shaft Wipers

Also known as 8600 type. While the outer lip scrapes foreign matter from the shaft, the inner lip acts as a pressure seal. Commonly used with JIC (Joint Industry Conference) cylinders. Wipers are made of Buna-N, which is recommended when using a rubber rod seal. Buna-N has excellent oil resistance. It also resists water, grease, and detergents, as well as some ammonias, alcohols, and refrigerants. Temperature range is –40° to +250° F. Durometer hardness is A90. Maximum pressure is 500 psi.

Also Available: Additional sizes. Please ask for 9422K12 and specify ID and OD.

Solid-Profile Polyurethane Shaft Wipers

Also known as U-type wipers, these are used for medium to heavy duty applications indoors and out. They resist tears, abrasion, ozone, and grease, as well as some compression set, oils, alcohols, and refrigerants. Temperature range is –65° to +200° F. Durometer hardness is A90. Maximum pressure is not rated.

Also Available: Additional sizes. Please ask for 9403K97 and specify ID and OD.

V-Ring Seals

An angular shape keeps V-ring seals intact under pressure. Utilize in hydraulic and pneumatic cylinders, motors, pumps, and valves to reduce equipment wear, fluid loss, and frequency of packing changes. Made of molded PTFE, they're suitable for reciprocating, oscillating, and rotary motion applications. Chemically inert except for molten alkali metals and fluorines. Temperature range is –110° to +500° F. Color is white.

A complete V-ring seal requires at least one V-ring, one male adapter, and one female adapter. The female adapter provides an extra sealing edge. V-rings are sold in packages of 10; adapters are sold in packages of two males and two females.

Single V-Ring

Five V-Ring Seal

Seal Repair Kits

When components from your rod and piston seals need repair, select one of these kits. All use a black Buna-N rod seal with a temperature range of –40° to +250° F. Kit components resist compression set, tearing, abrasion, and weather. Maximum pressure is 3,000 psi (reduces with use and wear).

5-Pc. Rod Seal Kits with Bronze Housing

Contains a bronze housing, rod wiper, rod seal, backup ring, and O-ring.

Stretch-Fit Rotary-Shaft Ring Seals

You can stretch these to fit over a shaft, while the flexible hinged lip still presses firmly against the shaft's face to deflect dust, dirt, and water. Seals also self-adjust, stretching to maintain fit when the shaft begins turning. They prevent the loss of lubricants such as grease and are made of carboxylated Buna-N for better abrasion resistance. Use on motors, pumps, and bearings in water, water-glycol, and water-soluble oil service. Seals resist weather, UV rays, ozone, water, compression set, grease, oil, detergents, salt water, hydraulic fluids, alcohol, and some refrigerants. Durometer hardness is A85. Temperature range is –20° to +225°F. Maximum pressure is 6 psi in the opening direction and 100 psi in the closing direction. Color is black.

Metal-Rubber Shaft Seals

Retain grease while eliminating contaminants on a rotating shaft. *Spring-loaded seals*, commonly called oil seals, also retain oil because a spring holds the lip in position. All seals are steel with Buna-N lips. Lips have a temperature range of –40° to +250° F. Color is black.

(1) Spring-loaded single lip seals are economical general purpose seals that retain lubricant. Maximum pressure is 10 psi at 0-1,000 fpm; 5 psi at 1,000-2,000 fpm; and 0 psi at 2,000-3,600 fpm.

(2) Spring-loaded double lip seals have a second lip to block dirt, enhancing the service life of the lubricant-retaining main lip. Maximum pressure is 10 psi at 0-1,000 fpm; 5 psi at 1,000-2,000 fpm; and 0 psi at 2,000-3,000 fpm.

(3) Heavy duty spring-loaded double lip seals are ideal when there's a significant difference in pressure across the seal. The main lip retains lubricant while the second lip protects from dust and contamination. Maximum pressure is 90 psi at 0 fpm and 50 psi at 1,000 fpm. *Note:* If pressure differential exists, seal should be secured in the housing bore.

(4) Non-spring-loaded seals retain grease and block dirt in slower speed applications. Install with lip facing outward to block dirt more effectively. Not for use with oil. Maximum pressure is 3 psi at 0-2,000 fpm.

Shaft Repair Sleeves

Press sleeve onto shaft

There's no need to run out and buy a new seal when your shaft gets worn. Also known as Speedi-Sleeves, these sleeves repair worn shafts without resizing them, so you can reuse your original seal. They're made of ultra-thin Type 304 stainless steel and press fit over shafts for a snug, leak-resistant fit. Each sleeve has a removable flange and a tool for simple push-on installation. Sleeves add just 0.022″ to the shaft diameter.

Pump Shaft Seals

Designed for use on self-priming and straight centrifugal pumps, seals are made of components locked together by an outer shell to keep the seal ring in place during installation. This prevents foreign material from collecting between the seal ring and the bellows. This mechanical lock eliminates the need for bonding adhesives and prevents leakage between the seal ring and diaphragm. Buna-N diaphragms have a temp. range of –40° to +200° F and a durometer hardness of A65. Fluoroelastomer diaphragms have a temp. range of –20° to +400° F and a durometer hardness of A70.

♣ Ni-Resist is cast iron with 13%-17% nickel for corrosion resistance.
★ Spring OD is slightly larger at one end to fit over pump hub. ■ Spring OD. ♥ Shaft mounted.

Style 1

- Max. Pressure: 150 psi
- Speed: 5,000 fpm
- Applications: Well, sump, and other small shaft diameter pumps
- Comparable to Pac-Seal Type 16, John Crane Type 6, and Sealol Type 60L

Style 2

- Max. Pressure: 250 psi
- Speed: 5,000 fpm
- Applications: Pumps used for well water, diesel engine coolant, waste water
- Type 304 stainless steel is comparable to Pac-Seal Type 21, John Crane Type 21, and Sealol Type 43 CE and 43 CU Short
- Type 316 stainless steel is comparable to Pac-Seal Type 51, John Crane Type 1, and Sealol Type 43 BE and 43 CE Short

Style 3

- Max. Pressure: 75 psi
- Speed: 15,000 fpm
- Applications: Small diameter rotary shaft applications
- Comparable to Pac-Seal Type 68, John Crane Type 6A, and Sealol Type 6

Spring-Loaded PTFE Shaft Seals

Chemical-resistant PTFE is combined with a stainless steel spring for a seal that adjusts to wear, plus dimensional and temp. changes. This enhances sealing efficiency by compensating for seal wear and mating part tolerance. Temp. range is –320° to +450° F. Max. pressure for slow rotary motion is 250 psi; for reciprocating motion, 3,000 psi.

PTFE— For light duty service. Has extremely low friction and excellent chemical resistance. PV limit (pressure × velocity) is 9,000 psi-fpm for air; 75,000 psi-fpm for water; and 130,000 psi-fpm for oil. Color is white.

Graphite-Reinforced PTFE— Excellent wear and extrusion resistance in liquids, steam, and other severe conditions. PV limit (pressure × velocity) is 15,000 psi-fpm for air; 300,000 psi-fpm for water; and 520,000 psi-fpm for oil. Color is black.

Compression Packing Seals

All material can be cut and formed into individual rings and then stuffed into place to act as seals. Styles 1-9 are used in both pumps and valves, Styles 10-14 are ideal in pumps, and Style 15 is for valves. Cut with a knife. **To Order:** Please specify 5-, 10-, or 25-ft. length.

♦ NR=Not Recommended ★ Chemically inert and offers the best chemical resistance.

(1) General Purpose— Made of graphite-impregnated aramid, this style seals very well without needing to pack the rings tightly, reducing wear on the shaft and packing. For general service in water, steam, oil, brines, solvents, mild acids, and mild alkalies.

Size, square		Each 5 ft.	10 ft.	25 ft.
1/8"	9518K81	$10.64	$16.12	$32.24
3/16"	9518K82	17.68	26.79	53.58

Compression Packing Seals *(Continued from previous page)*

To Order: Please specify 5-, 10-, or 25-ft. length.

(10) For Centrifugal Pumps— This flexible graphite offers outstanding sealability and chemical resistance. An anticorrosion additive prevents pitting. When pump pressures exceed 125 psi (1,000 psi for valves), use High-Speed packing seals (Style 3) for end rings.

Size, square		Each 5 ft.	10 ft.	25 ft.
1/8″	97675K4	$6.17	$9.35	$18.69
3/16″	97675K5	12.25	18.55	37.11

White Oakum Packing Seals

Consisting of jute fiber with additives to ensure pliability and expansion when wet, oakum packing will not dry out or rot. It withstands varying conditions of heat, cold, and moisture, plus resists diluted grease and detergents. It's used as a filler for sealing cast iron drain pipes and driveway joints. Oakum has eight-strand twisted construction. Not rated for temperature and pressure. Color is white. Cut with shears.

Nine 3/8″ Dia. 27″ Lengths	9475K12	Per Pkg.	$10.57
One 3/8″ Dia. 200-ft. Roll	9475K13	Each	$48.85

Lubricating Ring Seals for Compression Packing

- Temp. Range: –400° to +500° F
- Max. Temp. in Steam: 500° F
- Max. Pressure: 1,000 psi
- pH Resistance Range: 0 to 14

Also known as lantern rings and lantern glands, lubricating rings provide easy access for outside lubrication of packing in pumps, valves, and other rotating and reciprocating equipment. Just use a knife to cut one of these PTFE strips to any length to fit around a shaft, and place between layers of packing (install the same way as the packing). The side channels allow lubricant to evenly circulate to packing. Maximum continuous length is 4 ft. Color is white.

Thick.	Width		Per Ft. 1-3	4-Up

Candle Wicking

- Max. Temp.: 212° F; low end not rated
- Max. Temp. in Steam: 250° F
- Max. Pressure: 160 psi
- pH Resistance Range: Not rated

Cotton candle wicking absorbs water and seals itself, making an excellent packing material. It's spun into single-strand yarn and resists alkalies and salt water. Color is off-white. Furnished in approximately 2-oz. balls.

0.036″ Dia.	9484K1	Each	$3.15

Corrosion-Resistant Compressible Packing Seals for Valve Stems

Gore

Value Seal

- Temp. Range: Gore, –450° to +550° F; Value Seal, –450° to +500° F
- Max. Temp. in Steam: Gore, 550° F; Value Seal, 500° F
- Max. Pressure: Gore, 725 psi; Value Seal, not rated
- pH Resistance Range: 0 to 14

Soft, nonwoven expanded-PTFE packing conforms to fill irregularities in valve stems caused by wear. It's self lubricating and resists chemicals. Great for food and beverage applications. Color is white. Cut with a knife.

Value Seal— FDA compliant.

Self-Lubricating Packing Seal Tape for Pumps and Valves

- Temp. Range: –320° F to +840° F
- Max. Temp. in Steam: 1200° F
- Max. Pressure: Not rated
- pH Resistance Range: 0 to 14

While thicker packing seals contain binders and additives that can leach out, this thin graphite packing tape contains none. It's self lubricating and flexible, plus it provides outstanding performance over a broad temperature range and where chemicals are a problem. Simply form in place to fit any size pump or valve. Color is dark gray.

Adhesive-backed tape allows for quick installation.

Packing Seal Tools with Interchangeable Tips

Use these extractors with interchangeable tips to create an efficient system for removing packing and lantern rings and cleaning stuffing boxes. Suitable for use in packing that's wider than the tip diameter. Extractors and tips are made of steel.

Flexible-shaft extractors have a cable in the stem that allows a slight bend for better access to packing. ***Rigid-shaft extractors*** are for dense packing that doesn't break up easily. ***Corkscrew tips*** screw into standard packing for easy removal.

The interchangeable tips thread onto the extractors. ***Wood-screw tips*** are designed for removing hardened packing. Use ***brush tips*** to clean the stuffing box. ***Lubricating-ring tips*** permit easy removal of threaded lubricating rings.

Extractors—Include One Corkscrew Tip

Packing Seal Tool Sets

Sets are furnished in a plastic tool box.

13-Pc. Set—Contains two each of the 7½″ and 11″ flexible-shaft extractors and six corkscrew tips (three for each extractor size). Also includes three 10″ rigid-shaft extractor picks and a wrench.

9498K11 ..... **Per Set** $66.63

21-Pc. Set—Includes two of each flexible-shaft extractor, nine corkscrew tips (three for each extractor size), three wood-screw tips (one for each extractor size), three 10″ rigid-shaft extractor picks, and a wrench.

9498K12 ..... **Per Set** $107.83

45-Pc. Set—Contains two of each flexible-shaft extractor and rigid-shaft extractor listed above, plus 15 corkscrew tips (five for each extractor size), three wood-screw tips (one for each extractor size), four brush tips (one set each of 9756K62 and K64), and six lubricating-ring tips (one set each of 9756K72 and K74). Also includes three 10″ rigid-shaft extractor picks, two O-ring extractor picks, a wrench, and a packing cutting knife in a leather sheath.

9498K13 ..... **Per Set** $199.92

Rigid-Shaft Packing Seal Tools

Place and remove packing from stuffing boxes of engines, pumps, and other equipment. Tools have severely tapered tips to remove packing that is brittle or breaks up easily. Made of steel. All tools, except angled extractors, meet Fed. Spec. GGG-E-950A.

▲ Measured at widest point of tip.

4-Pc. Set—Includes a 12″ long installer/extractor pick and 6″, 10″, and 14″ long corkscrew extractors.

9494K23 ..... **Per Set** $62.70

6-Pc. Set—Includes a 12″ long installer/extractor pick; 8″ extractor; and 6″, 10″, 14″, and 18″ long corkscrew extractors.

9494K52 ..... **Per Set** $99.74

10-Pc. Set—Includes the installer with offset handle, both installer/extractor picks, both extractors, and all five corkscrew extractors listed above.

9494K19 ..... **Per Set** $164.40

Rigid-Shaft Packing Extractor Set

Nonsparking brass extractor set includes one 5 11/16″ long straight and one 5 13/16″ long hooked pry bar in a plastic pouch.

12995K21 ..... **Per Set** $13.11

Flexible-Shaft Packing Seal Extractors

The shank on these tools bends, allowing easy access to stuffing boxes for packing removal. All tools are steel with a T-handle. The corkscrew tip screws into the packing for easy removal. Tip is not interchangeable. Tools meet Fed. Spec. GGG-E-950A.

9492K19 ..... **Per Set** $35.44

8-Pc. Set—Includes one of each tool listed above, except 7″ long tool has a 11/64″ diameter instead of 5/32″.

9492K21 ..... **Per Set** $150.03

Ring-Seal Installers

Prevent damage to rod seals when installing them into small, closed-diameter gland openings or deep-set rod grooves. Rotate the handles to curl the seal, enabling it to pass through the throat of the rod gland. Recommended for use with rubber and urethane seals such as U-cups and O-rings. Not for use with rigid plastic materials such as PTFE and nylon.

Wool Felt Selector Pack— Includes seven samples; one 1¾″ × 1⅜″ piece of each of the following felts: F1, F3, F5, F7, F10, F13, and F26. Information about each felt is listed on the back side of the sample sheet.
9248K222 ..... $5.53

Hard Off-White S2 Felt

- Temperature Range: −80° to +200° F
- Vibration Absorption: Excellent
- Abrasion Resistance: Excellent

Made of 100% wool, this is the hardest felt we offer, yet it can still be used for polishing.

Grade S2-32— The hardest of these S2 grades, this material can be used as shock-absorbing bumpers, gaskets, and washers.

Grade S2-24— Slightly less firm than S2-32, this felt is commonly used for buffing, padding, in ink rollers, and in marking devices.

Grade S2-20— Use on polishing wheels for buffing lenses, mirrors, glass, marble, granite, metals, and wood.

Extra Firm White F1 Felt

Sheets and Sheeting

- Temperature Range:
  Plain back: −80° to +200° F
  Adhesive back: 0° to +180° F
- Vibration Absorption: Excellent
- Abrasion Resistance: Excellent

Composed almost entirely of pure wool, F1 is one of the most versatile graded felts. Its high density provides wear and abrasion resistance when used for polishing, wicking, cushioning, wiping, and gasketing. ***Adhesive-back*** sheets, strips, and discs have a rubber-based adhesive.

Sheets, Sheeting, and Strips

To Order: For sheeting, please specify length: 1, 2, 3, 4, 5, or 10 ft.
To Order: For strips, please specify length: 10, 25, or 50 ft.

For information about graded wool felt, see page 3504.

Firm Gray F3 Felt

- Temperature Range: Plain back: –80° to +200° F
  Adhesive back: 0° to +180° F
- Vibration Absorption: Excellent
- Abrasion Resistance: Excellent

Fabricated from coarse wool, this material is a common choice for vibration mountings.

Sheets and Sheeting

Sheets, Sheeting, and Strips

Adhesive-back sheets and strips have a rubber-based adhesive.

To Order: For sheeting, please specify length: 1, 2, 3, 4, 5, or 10 ft. **To Order:** For strips, please specify length: ½″ wide strips are available in 10- and 25-ft. lengths. 1″, 1½″, and 2″ wide strips are available in 10-, 25-, and 50-ft. lengths.

Soft Gray F7 Felt

- Temperature Range: Plain back: –80° to +200° F
  Adhesive back: 0° to +180° F
- Vibration Absorption: Good
- Abrasion Resistance: Good

When fabricating grease seals and wipers, this material's lower wool content makes it an economical alternative to F5 felt. ***Adhesive-back*** sheets and strips have a rubber-based adhesive.

To Order: For sheeting, please specify length: 1, 2, 3, 4, 5, or 10 ft. **To Order:** For strips, please specify length: ¼″ wide strips are only available in 10-ft. lengths. 1″, 1½″, and 2″ wide strips are available in 10-, 25-, and 50-ft. lengths.

Cotton Fabric

Sheeting

Standard cotton sheets, also known as canvas and cotton duck, are often used as dust covers and drop cloths. Material is unbleached; color is off-white.

Flame- and water-resistant sheets are also mildew resistant and can be used as tarps. Color is olive green.

Water-repellent sheets have been saturated in wax and have a polyester coating on one side that resists corrosion and moisture. The fabric is extremely flexible and is excellent for protecting piping and wrapping irregularly shaped material. It adheres to itself but can be separated easily. Color is tan.

To Order: Please specify length.

Leather

Vegetable-tanned cow leather is often used in belting applications for its stiffness. Max. temperature is 150°F. Color is tan.

Mineral-tanned cow leather is tougher yet more supple than vegetable-tanned leather and is often used as hydraulic seals. Maximum temperature is 200°F. Also known as chrome-tanned leather, color is blue gray.

Sheets and *strips* have a smooth side and a rough side. *Cord* has one smooth side and three rough sides.

Repl. Straight Sewing Needle	6356K44	4.79
Repl. Curved Sewing Needle	6356K46	4.79

Acrylic-Coated Fiberglass Fabric

This abrasion-resistant fabric sheds molten splatter when placed at an incline of 15° or greater. Maximum continuous temperature is 1000° F. Color is black.

To Order: Please specify length: 1, 3, 5, 10, 20, or 25 ft.

Thick.	Wd.	Density, oz./sq. yd.		Per Ft.
0.040″	40″	21	8838K2	$11.40
0.040″	60″	21	8838K4	16.99

Silica Fabric

Flexible

High Temperature

Containing 96% silica, the material resists the highest temperatures of any fabric we offer.

Flexible—Max. temp. is 1800° F. Color is tan. ***Adhesive-back*** strips have a rubber adhesive, which has a max. temperature of 275° F.

High Temperature—The fabric's thickness makes it resistant to higher temperatures than flexible sheeting and strips. Max. temp. is 2300° F. Color is off-white.

Sheeting

Commonly used as curtains, covers, insulation, and splash shields, this sheeting can be used to protect against welding splatter.

To Order: Please specify length: 1, 3, 5, 10, 20, or 50 ft.

Thick.	Wd.	Density, oz./sq. yd.		Per Ft.

Thread

Nylon Thread— Meets Fed. Spec. VT-295. Maximum temperature is 350° F. Color is white.
Polyester Thread— Meets Fed. Spec. VT-285. Maximum temperature is 400° F. Color is white.
Kevlar Thread— Five times stronger than steel wire and flame resistant. Meets MIL-T-87128. Maximum temperature is 600° F. Color is yellow.
PTFE-Coated Fiberglass Thread— The PTFE coating lets this thread slide easily. This thread has excellent chemical, ultraviolet, heat, and flame resistance and has a maximum temperature of 1000° F; coating has a maximum temperature of 500° F. Color is tan.
PTFE-Coated Quartz Thread— The coating provides a slippery surface. Quartz thread resists acids, alkalies, and the build up of contaminants. Thread is nonburning and has a maximum temperature of 2000° F; coating has a maximum temperature of 500° F. Color is tan.

Strips

Metal-free strips are also known as nonmetallic molded strips. ***High-strength*** strips, also known as semimetallic woven strips, have a brass wire woven into the material to increase strength and improve heat dissipation.

To Order: Please specify length: 1, 2, 3, 4, 5, 6, 10, or 15 ft. *High-strength* strips are also available in 25-ft. lengths.

About Selecting Thermal Insulation

A material's resistance to temperature and its ability to block heat are important factors to consider when choosing thermal insulation. *R-value* measures the material's capacity to slow heat flow; the higher the R-value, the better the material insulates. The chart below shows R-value for 1″ thick insulation. To calculate the R-value of additional thicknesses, divide the material's thickness by its K-factor. *K-factor* measures the heat flow rate from one side of the insulation to the other; the lower the K-factor, the better the material insulates.

Use the chart to find the insulation material that best suits your application. If insulating below 0° F, use polyethylene, foam rubber, aerogel, or polyimide insulation.

Insulation Material	Max Temp., ° F	R-Value @ 1″ thick	Pages
PVC Foam	160°	4.5	3519
Polystyrene Foam	165°	3.9-5.0	3519
Polyethylene Foam	180°	4.0	3514, 3520
Spray Foam	200°	5.0	3519
Polyurethane	200°	5.3-6.2	3516, 3519
Foam Rubber	220°	3.7	3512-13, 3520
Cork	265°	3.6	3520
Melamine	350°	4.0	3516, 3520
Fiberglass	350°-1000°	1.7-4.8	3513, 3515, 3521

Insulation Material	Max Temp., ° F	R-Value @ 1″ thick	Pages
Silicone Foam	390°	2.6	3513, 3520
Aerogel	390°	9.5	3520
Polyimide	550°	4.2	3520
Cellular Glass	900°	3.4	3516
Mineral Wool	1200°	3.7-4.4	3515, 3519-20
Calcium Silicate	1200°-1700°	1.0	3523
Millboard	1400°-2000°	1.0	3523
Ceramic	1500°-2730°	0.8-3.6	3522
Silica	2000°	1.3	3523

Selecting Insulation for Pipe and Fittings

Pipe and Tubing Application	Good	Better	Best
Hot and Cold Water (up to 200° F)	Polyethylene (pg. 3514)	Low-Temp. Polyethylene (pg. 3514)	Foam Rubber (pgs. 3512-3513)
Steam (up to 400° F)	Polyurethane (pg. 3516)	Melamine (pg. 3516)	Silicone (pg. 3513)
High Temperatures (up to 1200° F)	Fiberglass (pg. 3515)	Cellular Glass (pg. 3516)	Mineral Wool (pg. 3515)

To select the proper pipe insulation, measure the outside diameter (OD) of your pipe with a ruler to find the corresponding insulation ID. Pipe size is the accepted industry designation, not the actual size.

Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	2	2 1/2	3	3 1/2	4	6

Insulation ID	3/8″	1/2″	5/8″	7/8″	1 1/8″	1 3/8″	1 5/8″	2 3/8″	2 7/8″	3 5/8″	4 1/8″	4 1/2″	6 5/8″

Ultra-Flexible Foam Rubber Pipe Insulation

- Temperature Range: –295° to 220° F, except Slit with Adhesive Strip is –295° to 180° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 3-6 lbs./cu. ft.
- Color: Black

The most flexible pipe insulation we offer, this soft Buna-N/PVC rubber flexes for easy installation over curved or irregular surfaces and recovers its shape well after compression. Use on chilled water and refrigeration lines and with hot water plumbing. Material has a closed-cell construction for moisture resistance. Insulation can be used outdoors when coated with latex paint; seal seams and joints with contact adhesive (both sold separately). Meets ASTM E84 25/50 for flame and smoke and ASTM C534.

Accessories

White Latex Paint—This product is compliant under all state VOC rules in effect on November 1, 2011.

One Quart ..... 4530K183 .. $20.30

Contact Adhesive—This product is compliant under all state VOC rules in effect on November 1, 2011.

One Pint ..... 4463K211 .. $13.79

Flexible Tear-Resistant Silicone Foam Pipe Insulation

- Temperature Range: –100° to 500° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.39
- Density: 40-50 lbs./cu. ft.
- Color: Black

Resistant to tearing, silicone stretches over pipe and tubing even when the temperature rises. Use on heating and cooling pipes and electrical components. Material has a closed-cell construction that provides moisture resistance. Can be used outdoors. Lengths are unslit. Seal and join lengths with a silicone adhesive/sealant (see page 3418).

Flexible Quick-Install Fiberglass Pipe Insulation

- Temperature Range: 1/8″ thick: 40° to 250° F; 1/4″ thick: 40° to 350° F
- Heat Flow Rate (K-Factor) @ 75° F: 1/8″ thick: 0.60; 1/4″ thick: 0.49
- Density: 30-40 lbs./cu. ft.
- Color: Gray

Hook-and-loop fasteners make it easy to install, remove, and reuse this insulation time and again. Use on steam and hot water pipes and fittings. Meets ASTM E84 5/55 for flame and smoke.

Semi-Flexible Polyethylene Foam Rubber Pipe Insulation

- Temperature Range: Standard: 0 to 180° F
  Low Temperature: –330° to 210° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 1-2 lbs./cu. ft.
- Color: Dark gray to black, unless otherwise stated

An economical choice for insulating pipe, this foam rubber has a water-resistant closed-cell construction. Use for hot and cold plumbing applications. Can be used outdoors if coated with latex paint; seal seams and joints with contact adhesive (both sold separately). Meets ASTM E84 25/50 for flame and smoke.

Rigid High-Temperature Fiberglass Pipe Insulation

- Temperature Range:
  Slit Insulation for Pipe and Tubing:
  Insulation: 0° to 850° F
  Jacketing: –20° to 150° F
  Slit Insulation for Fittings: –20° to 650° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: 3-6 lbs./cu. ft.
- Color: Yellow, except insulation for pipe and tubing has white jacketing

Our most popular choice for rigid pipe insulation, fiberglass resists high temperatures as well as corrosion. Use in steam applications as well as hot and cold piping systems. Can be used outdoors with metal jacketing (see page 3518). All meet ASTM E84 25/50 for flame and smoke and ASTM C585. Insulation for pipe and tubing also meets ASTM C547.

Slit insulation for pipe and tubing has a vapor-retardant all-service jacket (ASJ) constructed from kraft paper, reinforced fiberglass mesh, and aluminum foil. The jacket has an adhesive strip for sealing. Seal joints with ASJ tape (sold separately).

Slit insulation for fittings installs with the included ties.

Rigid Very-High-Temperature Mineral Wool Pipe Insulation

- Temperature Range: 0° to 1200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: 8 lbs./cu. ft.
- Color: Green-yellow

Insulate against the highest temperatures with the most temperature resistant pipe insulation we offer. The material is often used in mechanical and process piping systems for its low shrinkage. Can be used outdoors with metal jacketing (see page 3518). Insulation lengths are slit and install with metal bands (see page 3518). Meets ASTM E84 5/0 for flame and smoke and ASTM C547.

For information about thermal insulation, see page 3512.

Measuring and Selecting Insulation ID for Pipe and Fittings

Measure the outside diameter (OD) of your pipe with a ruler to find the nearest corresponding insulation ID. Pipe size is the accepted industry designation, not the actual size.

Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	2	2 1/2	3	3 1/2

Rigid High-Strength Polyurethane Pipe Insulation

- Temperature Range: –295° to 300° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.17
- Density: 2 lbs./cu. ft.
- Color: Beige, except insulation for pipe and tubing has white jacketing

Stronger and more durable than other insulation, polyurethane is often used in chiller plants and low-pressure steam applications as well as with chilled water and refrigeration lines. Material has a closed-cell construction for moisture resistance. Can be used outdoors with additional jacketing. Meets ASTM E84 25/50 for flame and smoke.

Insulation for pipe and tubing has a kraft paper all-service jacket (ASJ) that resists mold and mildew by allowing moisture to evaporate. The jacket has a self-sealing adhesive strip.

Insulation for 90° elbows and ***for tees*** fits over threaded connections.

Rigid Lightweight Melamine Pipe Insulation

- Temperature Range:
  Insulation: –40° to 350° F
  Reinforced Jacketing: –40° to 240° F
  Clean Room Jacketing: 0° to 140° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 0.5 lbs./cu. ft.
- Color: Insulation: Light gray
  Jacketing: White

Melamine's lightweight construction allows for quick and easy installation. Use on cold and hot water piping and with refrigeration systems. Jackets have an easy-seal adhesive strip. Seal seams with a silicone sealant and join lengths with PVC tape (both sold separately). Meets ASTM E84 25/50 for flame and smoke. *Silicone sealant* is VOC compliant in all 50 states as of October 1, 2008.

Insulation with reinforced jacket has an all-service jacket (ASJ) made of kraft paper, fiberglass mesh, and aluminum foil and resists dents.

Insulation with class 100 clean room jacket has PVC jacketing suitable for sanitary and washdown applications.

Ultra-Rigid Chemical-Resistant Cellular Glass Pipe Insulation

- Temperature Range:
  Insulation: –450° to 900° F
  Jacketing: –40° to 240° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.29
- Density: 7.5 lbs./cu. ft.
- Color: Black, except insulation for pipe has white jacketing

Unaffected by corrosive environments, organic solvents, and nearly all acids, cellular glass is a good choice for underground-steam, chilled-water, and chemical-processing systems. Material is pure glass with a lightweight, brittle construction. Its closed-cell structure provides moisture resistance. Seal joints with tape (sold separately). Use insulation outdoors and underground with additional jacketing (sold separately). Meets ASTM E84 5/0 for flame and smoke.

Insulation for pipe lengths has a self-sealing jacket made of kraft paper. ***Insulation for 90° elbows*** and ***for tees*** is shaped to fit threaded or socket-weld fittings.

To Order: For 90° elbows and tees, please specify fitting style: threaded or socket-weld.

Condensation-Reducing Pipe Wrap

Prevent moisture from building up on pipe, tubing, and fittings made from copper, iron, and steel.
Butyl Rubber— Wrap adheres only to itself, not to the pipe or fitting. For indoor use only.
Cork/Synthetic Rubber with Adhesive-Backing— For indoor use only.
Aluminum-Faced Vinyl Foam with Adhesive-Backing— The foam's closed-cell structure is nonabsorbent. Can be used outdoors.
Synthetic Rubber with Adhesive-Backing— Protect pipe from corrosion above and below ground. Material is bacteria and UV resistant and can be used outdoors.

Material	Thick.	Wd.	Lg., ft.	Temp. Range (°F)	Color

Insulation Repair Wrap

- Max. Temperature: 900°F
- Color: White

Protect and repair insulation with this cotton fiber and resin mesh. For small sections, dip the wrap in warm water for five seconds then install. For large sections, apply dry to piping and spray with water. The wrap hardens in 10 minutes and achieves full strength in 24 hours. Once dry, wrap can be painted. Can be used outdoors. Meets ASTM E84-89A for flame and smoke.

Sweat-Stop Pipe Coating

- Temperature Range: Spray: 0° to 120°F
  Mastic: 0° to 150°F
- Color: Spray: White
  Mastic: Black

Condensation won't form on metal, PVC, and CPVC pipe used in cold water piping and refrigeration and air conditioning lines once this coating is applied.
Spray is for use indoors. ***Mastic*** can be used outdoors; apply with a brush or a trowel.

	Size	Coverage		
Spray	18 oz.	8 sq. ft. (2 coats)	6780K12	$17.20
Mastic	5 gal.	32 sq. ft. (1/4″ thick)	4588K2	146.28

Plastic Jacketing for Pipe Insulation

- Temperature Range: 0° to 140°F, except fiberglass insulation included with jacketing for fittings is 0° to 450°F
- Color: White

Durable PVC jacketing protects insulation from impact. Seal joints with tape or adhesive (sold separately). Meets ASTM E84 25/50 for flame and smoke. *Silicone adhesive* is compliant under all state VOC rules in effect on October 1, 2008.
Jacketing for pipe comes cut and curled for easy installation over your insulation. *0.030″ thick* jacketing can be used outdoors.
Jacketing for fittings comes with a removable 1 1/2″ thick piece of fiberglass insulation with a heat flow rate (K-factor) of 0.28 @ 75°F. Jacketing and fiberglass insulation can be used outdoors.

Metal Jacketing for Pipe Insulation

Weatherize your insulation with metal jacketing. Jacketing with a moisture barrier provides an extra layer of corrosion protection.

Aluminum Jacketing for Pipe and Tubing

Smooth

Stucco Embossed

Corrugated

- Maximum Temperature:
  Without moisture barrier: 300° F
  With moisture barrier: 200° F

Smooth jacketing is easy to clean; ***stucco-embossed jacketing*** conceals dents and scratches; and ***corrugated jacketing*** is extra strong. Jacketing is corrosion resistant and installs with banding (sold separately). **To Order:** Please specify length.

Aluminum Adhesive-Backed Jacketing for Pipe and Tubing

Smooth

Stucco Embossed

- Temperature Range: –10° F to 245° F

Adhesive backing provides a quick and easy way to install jacketing. Its reinforcing film blocks vapor from passing through. Meets UL 723 10/20 for flame and smoke.

Smooth jacketing is easy to clean; ***stucco-embossed jacketing*** conceals dents and scratches.

For information about thermal insulation, see page 3512.

Very-High-Temperature Mineral Wool Insulation Fill

- Maximum Temperature: 800° F
- Heat Flow Rate (K-factor): 0.27 @ 75° F
- Color: White to gray

Small puffs of loose-fill insulation let you decide how densely to pack it. Pour or blow it into walls and ceilings, or mix it into insulating cements as a filler. Fibers are treated to minimize dust. Meets ASTM E84 0/5 for flame and smoke.

2.8 cu. ft., 30-lb. Bag ..... 9332K65 ..... $26.96

Gap-Sealing Spray Foam Insulation

- Temperature Range: –200° to 240° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.20
- Density: 1-1.4 lbs./cu. ft.

Fill cracks with this single-use can of expanding insulation. Foam expands two to three times its original size, can be cut after one hour, and reaches full strength in 24 hours. Includes one dispensing tube. Insulation can be used outdoors if painted or covered for UV resistance.

Standard meets ASTM E84 25/50 for flame and smoke.

Low pressure expands with less force. Meets ASTM E84 5/10 for flame and smoke.

Size, oz.	Coverage (1/2" Bead), sq. ft.	Color		1-11	12-Up

Quick-Cure Spray Foam Insulation

- Temperature Range: –40° to 175° F
- Heat Flow Rate (K-Factor): Not rated
- Density: 1.9 lbs./cu. ft.
- Color: Light blue

Expanding quickly to fill large voids, this foam insulation cures in four minutes and is hard enough to be cut within ten minutes. Spray can is for single use and includes two dispensing tubes. Can be used outdoors. Meets ASTM E84 25/210 for flame and smoke.

Size, oz.	Coverage, cu. ft.		
12.5	0.3	54315K51	$38.46

Lightweight Moisture-Resistant Polystyrene Foam Insulation

A good choice for packaging applications, this durable and lightweight foam has a closed-cell construction that keeps moisture at bay.

Low Density

- Temperature Range: –150° to 165° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.26
- Density: 1 lb./cu. ft.
- Color: Uncoated: White
  Coated: White with gold facing

Meets ASTM E84 15/125 for flame and smoke.

Uncoated material meets UL 94HF1 for flame retardance.

Coated material has a polypropylene coating that blocks moisture from passing through. Can be used outdoors

Thick.	Pkg. Qty.	12"×12"	Pkg.	24"×48"	Pkg.
Uncoated

High Density

- Temperature Range: –150° to 165° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.20
- Density: 1.6 lbs./cu. ft.
- Color: Yellow

More rigid and compression resistant than low-density polystyrene. Sheets are scored for easy trimming. Can be used outdoors and below ground.

Thick.	48"×48"	
1"	9255K1	$24.44
1 1/2"	9255K2	35.40
2"	9255K3	46.69

Void-Filling Spray Foam Insulation

- Temperature Range: –200° to 200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.16
- Color: Off-white to beige

Take care of large cavities immediately when this insulation's two parts combine to expand up to at least three times their original size. Foam can be cut after five minutes and reaches full strength in one hour.

The 1.8-lb. size is single-use and includes two cans of foam and two fan spray nozzles. For all other sizes, foam is contained in two multi-use cylinders and comes with a trigger-style gun, five cone spray nozzles, and three fan spray nozzles. Insulation can be used outdoors if painted or covered for UV resistance.

Fire-rated foam meets ASTM E84 20/400 for flame and smoke.

Size, lbs.	Density, lbs./cu. ft.	Coverage, cu. feet

Repl. Fan-Spray Nozzle for 15-, 26-, 30-, and 88-lb. Sizes .. 9325K45 4.66

Water-Resistant PVC Foam Insulation

- Temperature Range: –325° to 160° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.22
- Density: Low Density: 3 lbs./cu. ft.
  High Density: 5 lbs./cu. ft.
- Color: Low Density: Blue
  High Density: Gray

These lightweight PVC sheets have a closed-cell construction, which resists moisture absorption. They also have good impact resistance. Can be used outdoors but may discolor in sunlight.

Thick.	32"×48"		Thick.	32"×48"

Moisture-Venting Polyurethane Foam Insulation

- Temperature Range: Plain Back: –20° to 200° F
  Adhesive Back: 200° F max. temp.; low end not rated
- Heat Flow Rate (K-factor) @ 75° F: 0.25-0.30
- Density: 2 lbs./cu. ft.
- Color: Black

An open-cell construction allows moisture to evaporate from this foam insulation. Material resists cracking and fading and has an easy-to-clean vinyl facing for added strength and abrasion resistance. Meets FMVSS-302 flammability requirements.

Thick.	54"×48" Sheets	Each	54" Wide Rolls Max. Lg., ft.		Per Ft.

For information about thermal insulation, see page 3512.

Low-Temperature Polyethylene Foam Rubber Insulation

- Temperature Range: –330° to 210° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 1-2 lbs./cu. ft.
- Color: Black

The closed-cell construction of these flexible foam sheets controls condensation even at low temperatures. Can be used outdoors if coated with latex paint (sold separately). Install with contact adhesive (sold separately). Meets ASTM E84 25/50 for flame and smoke.

White latex paint is compliant under all state VOC rules in effect on November 1, 2011. *Contact adhesive* is compliant under all state VOC rules in effect on November 1, 2011.

Abrasion-Resistant Silicone Foam Insulation

- Temperature Range: –65° to 390° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.39
- Density: 13 lbs./cu. ft.
- Color: White

Flexible even in high temperatures, these sheets have an aramid facing that protects against the most abrasive conditions and reduces tearing. Insulation can be used outdoors. Install with adhesive (sold separately). Foam, but not adhesive, meets UL 94HF1 and UL 94V0 for flame retardance.

Contact adhesive is compliant under all state VOC rules in effect on November 1, 2011.

Very-High-Temperature Mineral Wool Insulation

With Wire Mesh

- Temp. Range: 0° to 1200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: 8 lbs./cu. ft.
- Color: Green

When insulating in high temperatures such as in oven and power generating applications, durable mineral wool provides compression and moisture resistance. Sheets are semi-rigid and can be used outdoors with metal jacketing (see page 3518).

Plain sheets meet ASTM E84 25/50 for flame and smoke. ***Wire mesh*** reinforced sheets withstand extreme shock and vibration. Can be cut with wire-cutting pliers.

Thick.	Wd.	Lg.	Plain		Wire Mesh on One Side		Wire Mesh on Both Sides

Ultra-Flexible Foam Rubber Insulation

Plain Back

- Temperature Range:
  Plain back: –295° to 220° F
  Adhesive Back: 20° to 180° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 3-6 lbs./cu. ft.
- Color: Black

Soft Buna-N/PVC foam creates an extremely flexible insulation sheet. The material is elastomeric and has a closed-cell construction for moisture resistance. Can be used outdoors if coated with latex paint (sold separately). Meets ASTM E84 25/50 for flame and smoke. Install plain-back insulation with contact adhesive (sold separately).

White latex paint is compliant under all state VOC rules in effect on November 1, 2011. *Contact adhesive* is compliant under all state VOC rules in effect on November 1, 2011.

Lightweight Melamine Insulation

With Facing

- Temperature Range:
  Insulation: –40° to 350° F
  Facing: 30° to 150° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.26
- Density: 0.6 lbs./cu. ft.
- Color: Light gray

The lowest-density insulation sheets we offer, melamine's open-cell construction creates a lightweight and easy-to-install insulation. Can be used outdoors with jacketing or coating. Meets ASTM E84 25/50 for flame and smoke.

Sheets with facing have a white paper jacket reinforced with a fibrous layer of aluminum foil for impact resistance. Facing can be painted.

All-Service Jacket (ASJ) Tape—3″×10 yd.	76755A67	$8.49

Super-Insulating Thin Aerogel

- Temperature Range: –320° to 390° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.105
- Density: 10.7 lbs./cu. ft.
- Color: Black

Flexible, lightweight, and thin, aerogel maneuvers into the tight spaces that other insulation can't. Material is silica aerogel with reinforcing fibers and is often used for its temperature resistance in power generating applications. For increased insulation, it can be layered, laminated, or wrapped with foil.

Thick.	12″×26″	
0.079″	9590K8	$42.41

Compression-Resistant Polyimide Insulation

- Temperature Range: –300° to 550° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.24
- Density: 12 lbs./cu. ft.
- Color: Gold

This semi-rigid polyimide is durable and won't crack when subjected to extreme compression. Can be used outdoors with jacketing. Meets UL 94V0 for flame retardance.

Thick.	24″×24″		Thick.	24″×24″	
1/8″	93015K62	$68.13	1/4″	93015K66	$129.05
3/16″	93015K64	102.13	3/8″	93015K68	186.33

For information about thermal insulation, see page 3512.

Flexible Fiberglass Insulation

A popular choice when flexibility is a must, fiberglass insulation can be layered for increased thermal efficiency, unless otherwise stated. For improved durability and extra moisture resistance, choose insulation with a vapor seal, wrapping, or facing.

Narrow Strips

- Temperature Range: –50° to 250° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.30
- Density: 0.6 lbs./cu. ft.
- Color: Insulation: Gold
  Vapor Seal: ½″ thick is clear
  1″ thick is gray

The wrap's vapor seal prevents heat loss from hot water pipes and condensation from forming on cold water pipes. Use electrical tape to secure ends of wrap to pipe. For indoor use only. Meets ASTM E84 25/50 for flame and smoke.

½″ thick insulation includes a separate 2″×40 ft. vapor seal; *1″ thick* has a vapor-seal backing.

Thick.	Wd.	Lg., ft.		
½″	3″	35	4478K1	$6.28
1″	3″	25	4478K4	6.45

Strips

- Temperature Range: Not rated
- Heat Flow Rate (K-Factor) @ 75° F: 0.34
- Density: 0.5 lbs./cu. ft.
- Color: Insulation: White
  Kraft Paper Facing: Tan
  Polyethylene Wrapping: White

In addition to good heat insulation, these strips, also known as batts, reduce the transmission of sound through walls, ceilings, and floors when installed inside standard framework. Strips provide corrosion resistance. For indoor use only.

Uncoated— Meets ASTM E84 25/50 for flame and smoke.

Kraft Paper Faced— Edges are extended to aid installation. Seal joints with ASJ tape (sold separately).

Polyethylene Wrapped— More moisture-resistant than kraft paper, polyethylene increases strength and reduces fiber dust. It's solid on the front, perforated on the back, and has extended edges for easy installation. Seal joints with FSK tape (sold separately). Meets ASTM E84 25/50 for flame and smoke.

Sheeting

- Temperature Range:
  Uncoated: 0° to 350° F
  Vinyl faced: Not rated
  Foil faced: 0° to 250° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.28-0.30
- Density: 0.75-0.8 lbs./cu. ft.
- Color: Uncoated: Yellow
  Vinyl Faced: Yellow with white facing
  Foil Faced: Brown with silver facing

This double-duty sheeting insulates in high temperatures while reducing sound transmission. Sheeting provides corrosion resistance. For indoor use only. Meets ASTM E84 25/50 for flame and smoke.

Vinyl-faced sheeting has a tear-resistant facing with corners that extend to aid installation. ***Foil-faced*** sheeting has a facing constructed of a foil layer bonded to kraft paper. One edge is extended to aid installation. Cannot be layered.

	Thick.	48″×10 ft.		48″×100 ft.	
Uncoated	2″	9346K38	$33.03	9346K28	$171.71

Foil Faced	1½″	9160K4	28.89	9160K2	181.42

Very-High-Temperature Sheeting

- Temperature Range: 0° to 1000° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.26
- Density: 2.4 lbs./cu. ft.
- Color: Gray to brown

Whether it's for industrial furnaces or other extreme-heat applications, lightweight fiberglass sheeting can handle the heat. Can be used outdoors with metal jacketing (see page 3518). Meets ASTM E84 25/50 for flame and smoke.

Thick.	24″×8 ft.	
1″	9356K11	$15.54
1½″	9356K12	23.03
2″	9356K13	30.02

Paper

- Temperature Range: –425° to 1200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.21
- Density: 8.0 lbs./cu. ft.
- Color: White

Fiberglass paper won't shrink or lose shape in high-temperature applications, such as in air furnaces and hot water tanks. For indoor use only. Meets UL 94V0 for flame retardance.

Thick.	16″×10 ft.	
⅛″	9323K21	$26.10

High-Temperature Rigid Fiberglass Insulation

- Temperature Range:
  Insulation: 0° to 450° F
  Facings: 0° to 150° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: Medium: 3 lbs./cu. ft.
  High: 6 lbs./cu. ft.
- Color: Insulation: Yellow
  Foil Facing: Silver
  Kraft Paper Facing: White

Able to insulate in high-heat environments, these rigid sheets also reduce noise transmission. Sheets have vapor-retarding facings on one side. Seal foil-faced joints with FSK tape; seal kraft-paper-faced joints with ASJ tape (both sold separately). Can be used outdoors with metal jacketing (see page 3518). Meets ASTM E84 25/50 for flame and smoke. *High-density* sheets can withstand heavy use.

Foil facing is constructed from foil kraft paper.

All-Service Jacket (ASJ) Tape—3″×10 yd.					76755A67	8.49

High-Temperature Fiberglass Wrap Insulation

- Temperature Range:
  Insulation: –60° to 450° F
  Facing: –40° to 150° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.27
- Density: 3 lbs./cu. ft.
- Color: Insulation: Yellow
  Foil Facing: Silver
  Kraft Paper Facing: White

Also known as pipe and tank wrap, these strips are made of dense, thick fiberglass that provides excellent strength and flexibility. Seal foil-faced joints with FSK tape; seal kraft-paper-faced joints with ASJ tape (both sold separately). Strips have a facing on one side and can be used outdoors with metal jacketing (see page 3518).

Foil facing is constructed from foil kraft paper.

For information about thermal insulation, see page 3512.

Ultra-Thin Flexible Paper Insulation

- Temperature Range: –40° to 480° F
- Heat Flow Rate (K-Factor): 0.76 @ 75° F
- Density: 63 lbs./cu. ft.
- Color: Off-white

Often used in high-humidity applications for its low-moisture absorption, this glass-fiber-based paper meets UL 94V0 5VA for flame retardance and can be used as a flame barrier.

Thick.	Wd.	Lg.		
0.03″	19″	18″	9583T12	$9.03

Flexible Ceramic Insulation

The flexible option when insulating against extreme heat, this ceramic insulation can be used as a wrap and protects against molten metal sparks and splashes. It can also be used as a heat shield or to fabricate gaskets, line ovens and furnaces, and insulate hose and cables.

Extra High Temperature Strips

- Temperature Range: Insulation: –40° to 1500° F; Adhesive: Max. temp. is 300° F; low end not rated
- Heat Flow Rate (K-Factor): 0.82 @ 800° F
- Density: 35 lbs./cu. ft.
- Color: White

Strips are calcium aluminum silicate fiber and have an adhesive backing for easy installation.

Thick.	1″×25 ft.		2″×25 ft.		3″×25 ft.	
1/32″	4057K1	$23.13	4057K4	$38.33	4057K7	$57.57

Extra High Temperature Rigid Ceramic Insulation

Moisture-resistant sheets are silica ceramic insulation wrapped in polyethylene.

Thermal-shock-resistant sheets have excellent resistance to fluctuating temperatures. *Sheet with binder* is easier to handle at room temperature than sheet without binder, but contains a small amount of organic material that burns off and releases smoke at around 400° F. *Sheet without binder* won't produce smoke when heated.

Moldable sheets are rigid alumina silica that is formable when wet. Can be molded multiple times until exposed to heat.

For information about thermal insulation, see page 3512.

Harsh-Environment Silica Insulation

- Temperature Range: 0° to 2000° F
- Heat Flow Rate (K-Factor): 0.78 @ 800° F
- Density: 10 lbs./cu. ft.
- Color: White

Commonly used in furnaces and engine compartments, these 100% silica sheets withstand the high temperatures and corrosive acids that others can't. Insulation can be used outdoors with PVC or metal jacketing (sold separately; see pages 3517-3518).

Thick.	Wd.	Max. Length, ft.		Per Ft.
1/4"	36"	116	93435K16	$18.16
1/2"	36"	58	93435K26	31.30
1"	36"	33	93435K36	51.37

Rigid Calcium Silicate Insulation

These high-strength, durable sheets withstand the high heat conditions of ovens and furnaces.

High Temperature Sheets

- Maximum Temperature: 1200° F
- Heat Flow Rate (K-Factor): 0.73 @ 800° F
- Density: 14.5 lbs./cu. ft.
- Color: Gold

Meet ASTM E84 0/0 for flame and smoke.

Thick.	6"×36" Pkg. of 2		12"×36" Pkg. of 2		18"×36" Pkg. of 2

Firebricks and Accessories

Firebricks

- Maximum Temperature: See below
- Heat Flow Rate (K-Factor): 1.7-2.2 @ 1500° F
- Density: 42-48 lbs./cu. ft.
- Color: Off-white

Often used in furnaces, these bricks have been machined and fit together snuggly to minimize heat loss. Cut with a brick saw and install with fire brick bonding mortar (both sold separately). For indoor use only.

Max. Temp., °F	Thick.	Wd.	Lg.		
2300	2 1/2"	4 1/2"	9"	9355K2	$8.95
2600	2 1/2"	4 1/2"	9"	9355K1	10.90
Brick Saw				6914A61	18.40

Firebrick Bonding Mortar

- Maximum Temperature: 3000° F
- Density: 129 lbs./cu. ft.
- Color: Gray

Apply with a trowel to lay, coat, and bond firebricks. One pail contains enough ready-to-use mortar to set approximately 40 bricks. For indoor use only.

15-lb. Pail ..... 9368K6 ..... $30.11

Refractory Sealing Compound

- Temperature Range: –50° F to 2350° F
- Density: 100 lbs./cu. ft.
- Color: Tan

Worn firebrick can be revitalized. Coat bricks with this high-strength compound for renewed heat resistance and performance. Apply with a brush or spray for a crack-free seal.

1-gal. Container—93 sq. ft. ..... 9366K5 ..... $121.00

Extreme Temperature Cement

- Temperature Range: –300° to 5000° F
- Density: 55 lbs./cu. ft.
- Color: Off-white

After adding water, the cement mixture can be sprayed, troweled, or poured onto walls, structural beams, ducting, and copper plumbing in high-temperature environments. Use on wood, sheetrock, glass, metal, and paper. A slow air cure will prevent cracking. Trim with a utility knife. Meets ASTM E84 0/0 for flame and smoke.

50-lb. Bag—22 sq. ft.@ 1/2" thick ..... 9876K1 ..... $69.23

Extreme Temperature Ready-Mixed Cement

- Maximum Temperature: 3000° F
- Density: 126-130 lbs./cu. ft.
- Color: Gray or black

Install, set, and repair furnaces, heaters, stoves, and boilers with this ready-to-use cement. It experiences minimal shrinkage creating a permanent smokeproof and gasproof joint. Use on cast iron, steel, and glass. A minimum temp. of 400° F is needed to harden cement. Apply with a trowel or spatula. Can be used outdoors. Cut with a carbide-tipped saw.

	Coverage (approx. sq. ft. @ 1/4" thick)	Gray		Black

Millboard Insulation

When insulating kilns, ovens, furnaces, and boilers, this millboard insulation acts as a high-temperature heat shield.

High temperature and ***extra high temperature*** sheets are made of rock wool mineral fibers, clay, and filler.
Ultra high temperature sheets are made of ceramic fibers, clay, and filler.

High Temperature Sheets

- Maximum Temperature: 1380° F
- Heat Flow Rate (K-Factor): 0.81 @ 750°F
- Density: 59 lbs./cu. ft.
- Color: Off-white

Thick.	39"×39"	
1/16"	9362K16	$21.50
1/8"	9362K11	34.55
3/16"	9362K12	43.50

Sound Absorbers

Quiet noisy environments by reducing sound reflection off hard surfaces, such as walls and ceilings. Sound absorbers are also often used to line the inside of enclosures that have been built around loud machinery. For indoor use only, unless otherwise stated.

For information about hearing protection, please see page 1823.

Sheeting

Heat Reflecting

Standard

Water Resistant

Made of humidity-resistant polyurethane foam, this flexible sheeting resists dirt and dust. Color is gray, except water-resistant sheeting is black. All sheeting meets FMVSS-302.

Plain-back sheeting has a temperature range of –40° to 225° F. Meets UL 94HBF for flame retardance. ***Adhesive-back*** sheeting has a temperature range of –40° to 175° F.

Easy-to-clean sheeting has a skin on both sides. *Water-resistant* sheeting has a urethane coating that also protects against oil. *Heat-reflecting* sheeting has a foil facing. *Heavy-duty heat-reflecting* sheeting has a tear-resistant foil facing.

To Order: Please specify length up to 50 ft., except standard sheeting is available in lengths up to 25 ft.

Sheets

Egg Crate

Easy-to-Clean and Fire Retardant

Water Resistant

Extreme Temperature

Egg crate sheets are made of humidity-resistant, flexible polyurethane foam that has peaks and valleys to absorb more sound at high frequencies than flat-surface sheets. Color is gray. *Plain back* have a temperature range of –40° to 225° F and meet UL 94HF1 for flame retardance. 97″ long sheets meet California Flammability Requirements (CAL 117). *Adhesive-back* foam resists temperatures of –40° to 225° F; the adhesive has a maximum temperature of 175° F and is not rated for minimum temperature.

Easy-to-clean sheets are semi-rigid melamine foam with a gray coating that resists dust and dirt and can be wiped down. Sheets have one smooth and one peaked side for increased sound absorption. Temperature range is 0° to 300° F. Meet UL 94V0 for flame retardance and ASTM E84 15/150 for flame and smoke.

Fire-retardant sheets are made of semi-rigid melamine foam that has one smooth and one peaked side for increased sound absorption. Color is white. Temperature range is 0° to 300° F. Meet UL 94V0 for flame retardance and ASTM E84 5/50 for flame and smoke.

Water-resistant sheets will not degrade if used in areas occasionally splashed with salt water. Made of rigid polypropylene foam with a temperature range of –40° to 185° F. Color is gray. Can be used outdoors.

Extreme-temperature sheets are made of flexible polyimide foam, which has a temperature range of –235° to 400° F; adhesive backing has a temperature range of –60° to 250° F. Color is yellow. Meet UL 94HF1 for flame retardance.

Panels

Fire Retardant (Three Shown)

Fire-retardant panels are ideal for use in large open areas because they have two peaked sides for increased sound absorption. Made of semi-rigid melamine foam, these ceiling-mount panels install with the two included hangers. Temperature range is 0° to 300° F. Color is white. Meet UL 94V0 for flame retardance and ASTM E84 5/50 for flame and smoke.

Heavy-duty panels are made of quilted, flexible double-faced fiberglass with a vinyl coating that resists abrasion, oil, dirt, moisture, and most solvents. Panels have five ⅝″ grommets on one 48″ side for wall mounting. Temperature range is –20° to 180° F. Color is gray.

Ready-to-Hang Cylinder

Great for use in noisy indoor areas with high ceilings, this cylinder absorbs sound from all directions. Constructed of molded fiberglass with a gray nylon cover, it's equivalent to 10 to 15 sq. ft. of acoustical ceiling tile. Install horizontally using the two ½″ ID eyelets. Temperature range is –30° to 500° F. Meets ASTM E84 25/320 for flame and smoke.

Sound Absorbed	Dia.	Lg.	Wt., lbs.		
93%	12″	24″	6	53905T313	$130.91

Sound Barriers

Block noise from traveling to other parts of your facility. When sound hits these barriers, it's reflected back toward the source. *Curtains* have five 5/8″ grommets on their top edge for hanging and hook-and-loop fasteners on their sides for joining multiple curtains.

Tear-resistant barriers are gray. Temperature range is –20° to 180° F. Can be used outdoors.

See-through barriers are ideal for use as an enclosure window and wherever visibility is required. Temperature range is 0° to 150° F. For indoor use only.

See-Through Curtain (Four Shown)

Curtain Hooks					54895T44	Pkg. of 10			$8.32

Sound Absorber-Barriers

Often used to line the inside of enclosures that have been built around loud machinery, this double-duty insulation reduces noise within an area and prevents the noise from escaping into other parts of your facility. For indoor use only, unless otherwise stated.

Sheeting

Foam sheeting has a vinyl barrier bonded to gray polyurethane foam sheets. It resists breaking down in humid environments. Temperature range is –20° to 180° F. *Foil-faced* sheeting resists dirt, grease, and water.

Fiberglass sheeting consists of a yellow fiberglass absorber, a vinyl barrier, and a corrosion- and tear-resistant reinforced aluminum foil facing. It's also known as lagging. Temp. range is –20° to 180° F. Can be used outdoors. Meets ASTM E84 15/20 for flame and smoke.

Foil-Faced Foam

Uncoated Foam

Foil-Faced Fiberglass

Sheets

Made of gray melamine foam with a vinyl barrier, these sheets are fire-resistant. Install with the thicker foam side facing the noise source. Temperature range is 0° to 250° F.

Flat-surface sheets are FDA compliant and meet ASTM E84 5/20 for flame and smoke.

Peaked-surface sheets have more surface area for sound absorption than flat-surface sheets. They also have an easy-to-clean vinyl-based coating. Meet ASTM E84 15/150 for flame and smoke.

Peaked Surface

	Sound Absorbed	Barrier Rating	Thick.	24″×48″	
Flat Surface	65%	Best (30 dB)	1¼″	54995T21	$66.31
Peaked Surface	85%	Best (28 dB)	1⅜″	54995T22	83.33

Quilted Panels and Screens

Connect multiple panels or screens with the included hook-and-loop fasteners. The insulation is flexible and made of a vinyl barrier sandwiched between quilted vinyl-coated fiberglass absorbers. Color is gray. Temperature range is –20° to 180° F.

Panels have five 5/8″ grommets across the top for hanging and a 1.5 lbs./sq. ft. hanging weight. Meet ASTM E84 25/35 for flame and smoke.

Screens act as a partition from loud machinery and noisy areas. Frame assembles without tools.

Quilted Surface

Sound and Vibration Dampers

Stop sound at its source. Dampers reduce the amount of noise emitted from a vibrating surface. For damping pads, see page 1384; for damping mounts, see page 1374.

Tape

Often used on panels and support structures, this damping tape is made of adhesive-backed aluminum foil. Thickness is 0.015″. Temperature range is 35° to 140° F.

Vibration Reduced	Wd.	Lg., yds.		
5%	1″	5	6307A21	$16.13
5%	2″	5	6307A22	39.11

Coating

Control vibration of irregular shapes and large areas. Multiple coats can be applied to achieve desired noise reduction. Maximum temperature is 250° F.

18-oz. Aerosol—This product is compliant under all state VOC rules in effect on November 1, 2011.

	Approx. Coverage	Color		
18-oz. Aerosol	20 sq. ft.	Black	9545T5	$10.95
1-qt. Bottle	10 sq. ft.	Gray	9545T2	33.33

Adhesive-Back Sheets

Plastic resists oil and grease. Maximum temperature is 125° F. *Black* and *blue* sheets meet UL 94HB for flame retardance. *Gray* sheet meets UL 94HF1 and UL 94V0 for flame retardance.

Aluminum resists water and corrosion. Temperature range is –40° to 175° F.

About Rubber and Polyurethane

Rubber is good for shock absorption, insulation, and sealing because it is strong, stretches, and bounces back.
Polyurethane bridges the gap between rubber and plastics by combining rubber's characteristics with the cut, tear, and abrasion resistance of plastics.

Material Selector Pack— Includes one individually marked piece of each of the materials marked with a ★ below. Sizes range from 4″×4″ to 6″×6″. Thicknesses range from 1/16″ to 1/8″.

8450K2 ..... **Per Pkg.** $52.27

***Note:** The charts below will help you make general comparisons.*

Maximum Temperature

Oil Resistance

A material's ability to maintain its physical properties when it comes in contact with petroleum-based fluids and to resist absorption/swelling.

Excellent	Good
Aflas, ECH, Fluorosilicone, Polyethylene, Viton® Fluoroelastomer	Buna-N, Buna-N/Vinyl, Neoprene, Polyurethane, Santoprene, Vinyl

Abrasion Resistance

The extent to which a material resists wear ordinarily caused by rubbing/scraping other surfaces.

Excellent	Good	Fair
Gum, Polyurethane	Aflas, Fluorosilicone, Polyethylene, Latex, Neoprene, Santoprene, SBR, Viton® Fluoroelastomer	Buna-N, Buna-N/Vinyl, ECH, EPDM, Vinyl

Weather Resistance

How well a material withstands exposure to sunlight, oxygen, and ozone without breaking down.

Excellent	Good	Fair
Aflas, EPDM, Fluorosilicone, Polyethylene, Silicone, Viton® Fluoroelastomer	Butyl, ECH, Polyurethane, Santoprene, Vinyl	Buna-N/Vinyl, Gum, Neoprene, SBR

Chemical Resistance

Indicates that a material can be used in a wide range of chemical environments while still retaining its physical properties.

Excellent	Good	Fair
Aflas, Butyl, Fluorosilicone, Polyethylene	Buna-N/Vinyl, ECH, Polyurethane, Santoprene, Viton® Fluoroelastomer	Buna-N, EPDM, Latex, Neoprene, Silicone, Vinyl

Durometer Hardness Scales

Durometer is the international standard for measuring the hardness of rubber, plastic, and most nonmetallic materials. The hardness of a material is its resistance to surface penetration. Harder materials have more wear resistance but they are also less flexible. An object may fall within more than one scale—for example, a typical shoe heel is 95 Shore OO, 70 Shore A, and 22 Shore D.

Durometer Hardness Selector Pack— Includes 14 samples, one each of the following durometer hardnesses: 30 OO, 40 OO, 50 OO, 60 OO, 70 OO, 30A, 40A, 50A, 60A, 70A, 80A, 90A, 95A, and 75D. Material is oval or ring shaped. Sizes vary from 1¾″ to 3″ dia. Thicknesses range from 1/8″ to 3/16″.

8450K3 ..... **Per Pkg.** $23.41

For information about rubber and durometer hardness scales, see page 3526.

High-Strength Multipurpose Neoprene Rubber

- Color: Black, unless noted
- Temperature Range: –40° to +212° F, unless noted
- Tensile Strength: 1500 psi, except for 30A sheets, sheeting, and strips, which are 1200 psi
- Use indoors and outdoors

This extremely versatile rubber offers an ideal balance of strength, oil resistance, flame resistance, and weatherability. Also known as chloroprene, it has excellent resilience, making it a popular choice for shock-absorbing applications.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber only (not adhesive) meets ASTM D2000 BC and MIL-R-3065. Adhesive is acrylic and has a temperature range of –20° to +212° F. Sheets and strips have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +2″. Durometer tolerance is ±5. **To Order:** Please specify durometer hardness: 30A (soft), 40A (medium soft), 50A (medium), 60A (medium hard), 70A (hard), or 80A (hard).

Durometer Hardness Selector Pack—Includes six plain-back 6″×6″×1/8″ thick sheets, one of each durometer hardness: 30A, 40A, 50A, 60A, 70A, and 80A.

Tight-Tolerance Sheets and Sheeting—One side is buffed to accept adhesive, one side has a smooth finish, unless noted.

Meet ASTM D2000 BC. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of ±1″. Durometer hardness is 50A (medium). Durometer tolerance is ±5.

		SHEETS				SHEETING 36″ Wide

Certified Mil. Spec. Sheets—Smooth Finish

Meet MIL-R-6855E. Certificate of conformance allows for traceability back to the date of manufacture and lot number. Width and length tolerances are ±5/8″, except for 36″×36″ sheets, which are ±1″. Durometer tolerance is ±5. **To Order:** Please specify durometer hardness: 40A (medium soft) or 60A (medium hard).

Thick.	Thick. Tolerance	12″×12″	Each	12″×24″	Each	36″×36″	Each

Balls—Smooth Finish

- Color: Black or white
- Temperature Range: 0° to 212° F
- Use indoors

These molded balls are a good choice for screen cleaning in applications involving vibrating machinery. Diameter tolerance is ±1/8″. Durometer hardness is 55A (medium hard). Durometer tolerance is ±5. ***White*** balls are made of FDA-compliant materials.

For information about rubber and durometer hardness scales, see page 3526.

Ultra-Strength Neoprene Rubber

- Color: Black
- Temperature Range: –40° to +220° F
- Tensile Strength: 2500 psi
- Use indoors and outdoors

A virtually pure neoprene, this resilient material combines increased strength with good flame resistance and oil resistance. Also known as chloroprene, it's frequently used in shock-absorbing applications due to its excellent recovery from compression.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber only (not adhesive) meets ASTM D2000 BC. Adhesive is acrylic and has a temperature range of –20° to +220° F. Sheets and strips have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +2″. Durometer tolerance is ±5.

To Order: Please specify durometer hardness: 50A (medium), 60A (medium hard), or 70A (hard).

Medium-Strength Neoprene Rubber

- Color: Black
- Temperature Range: –20° to +200° F
- Tensile Strength: 1000 psi, unless noted
- Use indoors

Also known as chloroprene, this economical general-purpose rubber maintains its resiliency even after extended compression.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber only (not adhesive) meets ASTM D2000 BC. Adhesive is acrylic and has a temperature range of –20° to +200° F. Sheets and strips have a width tolerance of ±1/4″ and a length tolerance of +1″, –1/4″. Sheeting has a width tolerance of ±1/4″. Durometer tolerance is ±5. **To Order:** Please specify durometer hardness: 30A (soft), 40A (medium soft), 50A (medium), 60A (medium hard), 70A (hard), or 80A (hard).

Durometer Hardness Selector Pack—Includes six plain-back 6″×6″×1/8″ thick sheets, one of each durometer hardness: 30A, 40A, 50A, 60A, 70A, and 80A.

Grip-All Sheets and Sheeting—Textured Finish

Both sides of this rubber have a very fine weave textured finish that provides a superior nonslip gripping surface. Adhesive is acrylic and has a temperature range of –20° to +180° F. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer tolerance is ±5.

To Order: Please specify durometer hardness: 40A (medium soft), 50A (medium), 60A (medium hard), or 70A (hard).

Super-Soft Neoprene Rubber

- Color: Black
- Temperature Range: −30° to +225° F
- Tensile Strength: 450 psi
- Use indoors and outdoors

One of the softest rubbers we offer, this material is more conformable than our other neoprene rubbers but does not have the same strength.

Sheets, Sheeting, and Strips—Smooth Finish

Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Strips have width and length tolerances of +1″. Durometer tolerance is +10 for 10A material and ±5 for 20A material.
To Order: Please specify durometer hardness: 10A (soft) or 20A (soft). Strips are only available in 10A.

Nonmarking, Adhesive-Ready, Fire-Retardant, and Static Control Neoprene Rubber

- Color: Black
- Temperature Range: −30° to +220° F, except adhesive-ready is −20° to +170° F
- Tensile Strength: 1200 psi, except adhesive-ready is 900 psi
- Use indoors and outdoors, except adhesive-ready is for indoor use only

Choose from four specialized versions of neoprene. ***Nonmarking*** neoprene won't leave a mark behind. ***Adhesive-ready*** neoprene is buffed on one side to accept adhesive. ***Fire-retardant*** neoprene is treated, so it will extinguish itself once the flame source is removed. ***Static control*** neoprene conducts static electricity and protects from damaging static charges and shock.

Sheets and Sheeting

All meet ASTM D2000 BC, except fire-retardant neoprene, which meets ASTM C1166. Sheets have width and length tolerances of ±1/2″. Sheeting has a width tolerance of ±1″. Durometer hardness is 50A (medium), except for adhesive-ready neoprene, which has a durometer hardness of 60A (medium hard). Durometer tolerance is ±5.

Neoprene Rubber

For information about rubber and durometer hardness scales, see page 3526.

FDA-Compliant Neoprene Rubber

- Color: Off-White
- Temperature Range: –30° to +220° F
- Tensile Strength: 1200 psi
- Use indoors and outdoors

This nonmarking neoprene is made of FDA-compliant materials so it's safe for food contact.

Sheets and Sheeting—Smooth Finish

Meet ASTM D2000 BC. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer hardness is 55A (medium). Durometer tolerance is ±5.

Laminated Neoprene Rubber

- Color (Rubber): Black
- Temperature Range: –30° to +200° F
- Tensile Strength (Rubber): 1000 psi
- Use indoors and outdoors

Providing both shock absorption and stability, these versatile sheets consist of multipurpose neoprene rubber that's bonded onto a plastic or metal backing plate.

Sheets—Smooth Finish

Rubber only (not adhesive) meets ASTM D2000 BC and has a durometer hardness of 70A (hard). Durometer tolerance is ±5. Laminate is 1/8″ thick. Width and length tolerances are ±1/8″, except 24″×24″ sheets are ±1/4″.

UHMW Polyethylene Laminate—Yield strength is 3,050 psi.
Polypropylene Laminate—Yield strength is 5,200 psi.
Aluminum Alloy 6061 Laminate—Yield strength is 40,000 psi.
To Order: Please specify laminate: UHMW polyethylene, polypropylene, or aluminum Alloy 6061.

Neoprene Spring Rubber

- Color: Black
- Temperature Range: –30° to +200° F
- Tensile Strength: 1700 psi, unless noted
- Use indoors and outdoors

Neoprene blended with elastomeric fillers produces this hard, resilient material that bends yet resists breaking.

Sheets—Smooth Finish

Meet ASTM D2000 BC. Width tolerance is ±3/8″ for sheets up to 24″ wide and +1″ for 36″ wide sheets. Length tolerance is ±1/8″ for 6″ and 12″ lengths and +1″ for 36″ lengths. Durometer hardness is 70A (hard). Durometer tolerance is ±5.

For information about rubber and durometer hardness scales, see page 3526.

Fabric-Reinforced Neoprene Rubber

- Color: Black
- Temperature Range: –30° to +200° F
- Tensile Strength (Rubber): See below
- Use indoors and outdoors

Fabric reinforcement provides additional strength and makes this rubber ideal for stress applications such as gasketing and diaphragm packing.

Medium-Strength and High-Strength Sheets and Sheeting—Smooth Finish

- Tensile Strength (Rubber): 1000 psi for *medium strength*; 1500 psi for *high strength*

Rubber only (not fabric insert) meets ASTM D2000 BC and has a durometer hardness of 70A (hard). Durometer tolerance is ±5. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″.

Medium Strength—A 4-oz. cotton one-ply fabric is inserted for each 1/16″ of thickness.

High Strength—A 14-oz. nylon one-ply fabric is inserted for each 1/16″ of thickness and offers greater tensile strength and durability.

Chemical-Resistant Polyethylene Rubber

- Color: Black
- Temperature Range: –20° to +250° F
- Tensile Strength: 1500 psi
- Use indoors and outdoors

Also known as chlorosulfonated polyethylene and comparable to Hypalon, polyethylene rubber (CSM, CSPE) is engineered for increased resistance to acids, alkalies, oils, greases, and ozone. It also resists flex cracking and abrasion from weather and heat. Because of these properties, and the fact that it has low water absorption, it is often used in roofing systems, hose, timing belts, and insulation.

Sheets, Sheeting, and Strips—Smooth Finish

Meet ASTM D2000 CE. Sheets have width and length tolerances of ±3/32″. Sheeting has a width tolerance of ±1″. Strips have a width tolerance of +3/16″ and a length tolerance of +1″. Durometer hardness is 65A (medium hard). Durometer tolerance is ±5.

Ultra-Strength Oil-Resistant Buna-N Rubber

- Color: Black
- Temperature Range: –40° to +212° F
- Tensile Strength: 2500 psi
- Use indoors

Get the highest tensile strength available for Buna-N, a material that offers outstanding resistance to vegetable- and petroleum-based oils, solvents, and lubricants. Also known as nitrile, acrylonitrile butadiene, and NBR.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber only (not adhesive) meets ASTM D2000 BG and MIL-R-3065 Grade SB. Adhesive is acrylic and has a temperature range of –20° to +180° F. Sheets and strips have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer tolerance is ±5. **To Order:** Please specify durometer hardness: 50A (medium), 60A (medium hard), or 70A (hard).

Durometer Hardness Selector Pack—Includes three plain-back 6″×6″×1/8″ thick sheets, one of each durometer hardness: 50A, 60A, and 70A.

For information about rubber and durometer hardness scales, see page 3526.

High-Strength Oil-Resistant Buna-N Rubber

- Color: Black
- Temp. Range: –20° to +212° F, except balls, which have a temp. range of –20° to +200° F
- Tensile Strength: 1500 psi
- Use indoors

Also known as nitrile, acrylonitrile butadiene, and NBR, this rubber has a good balance of oil and solvent resistance when compared to other rubbers, but is not as weather resistant.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber only (not adhesive) meets ASTM D2000 BG and MIL-R-3065. Adhesive is acrylic and has a temperature range of –20° to +200° F. Sheets and strips have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer tolerance is ±5. **To Order:** Please specify durometer hardness: 40A (medium soft), 50A (medium), 60A (medium hard), or 70A (hard). Adhesive back is not available in 40A.

Durometer Hardness Selector Pack—Includes four plain-back 6″×6″×1/8″ thick sheets, one of each durometer hardness: 40A (medium soft), 50A (medium), 60A (medium hard), and 70A (hard).

For information about rubber and durometer hardness scales, see page 3526.

Medium-Strength Oil-Resistant Buna-N Rubber

- Color: Black
- Temperature Range: –20° to +220° F, unless noted
- Tensile Strength: 1200 psi, unless noted
- Use indoors

This economical grade of Buna-N offers good resistance to oils and solvents but is not as weather resistant as other rubbers. Also known as nitrile, acrylonitrile butadiene, and NBR.

Sheets, Sheeting, and Strips—Smooth Finish

- Temperature Range: –20° to +170° F
- Tensile Strength: 800 psi, except 70A material is 1000 psi

Rubber, but not adhesive, meets ASTM D2000 BF. Adhesive is acrylic and has a temperature range of –20° to +170° F. Sheets and strips have width and length tolerances of ±1/2″. Sheeting has a width tolerance of ±1/2″. Durometer tolerance is ±5. **To Order:** Please specify durometer hardness: 40A (medium soft), 50A (medium), 60A (medium hard), or 70A (hard). 1/32″ thick material is not available in 40A durometer hardness.

Durometer Hardness Selector Pack—Includes four 6″×6″×1/8″ thick sheets, one of each durometer hardness: 40A, 50A, 60A, and 70A.

FDA-Compliant Oil-Resistant Buna-N Rubber

- Color: See below
- Temperature Range: –20° to +200° F
- Tensile Strength: See below
- Use indoors

Typically used in food-processing applications, this Buna-N rubber is made from FDA-compliant materials. Also known as nitrile, acrylonitrile butadiene, and NBR, it has superior resistance to oils and solvents and good resistance to abrasion, alkalies, and permeability of gases.

Medium-Strength Sheets, Sheeting, and Strips—Smooth Finish

- Color: White or red
- Tensile Strength: *White*: 1000 psi; *red*: 1200 psi

White—Adhesive is acrylic and has a temperature range of –20° to +200° F. Sheets and strips have width and length tolerances of ±1/2″. Sheeting has a width tolerance of ±1″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

Red—Rubber, but not adhesive, meets ASTM D2000 BG. Adhesive is acrylic and has a temperature range of 50° to 200° F. Sheets have width and length tolerances of ±1/8″. Sheeting has a width tolerance of ±1″. Durometer hardness is 55A (medium). Durometer tolerance is ±5.

High-Strength Sheets, Sheeting, and Strips—Smooth Finish

- Color: White
- Tensile Strength: 1500 psi

Meet ASTM D2000 BF and 3-A sanitary standards. USDA-compliant for meat and poultry processing. Sheets have width and length tolerances of ±1/2″. Strips have a width tolerance of ±1/2″ and a length tolerance of ±1″. Sheeting has a width tolerance of ±1″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

High-Temperature Oil-Resistant Buna-N Rubber

- Color: Black
- Temperature Range: –30° to +300° F
- Tensile Strength: 1500 psi
- Use indoors

Peroxide-cured for improved temperature resistance, this material also offers excellent oil resistance as well as good resistance to abrasion, acids, alkalies, and permeability of gases. Commonly referred to as nitrile, acrylonitrile butadiene, and NBR.

Sheets and Sheeting—Smooth Finish

Meet ASTM D2000 BG and MIL-R-3065. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

		SHEETS				SHEETING

Fabric-Reinforced Oil-Resistant Buna-N Rubber

- Color: Black
- Temperature Range: –20° to +220° F
- Tensile Strength: 1500 psi
- Use indoors

Ideal for use in applications such as diaphragm packing, this rubber is internally reinforced with layers of fabric to increase its strength while maintaining its oil and solvent resistance.

Sheets and Sheeting—Smooth Finish

Rubber, but not fabric insert, meets ASTM D2000 BG and has a durometer hardness of 70A (hard). Durometer tolerance is ±5. A lightweight one-ply piece of nylon fabric is inserted for each 1/16″ of thickness. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″.

For information about rubber and durometer hardness scales, see page 3526.

Laminated Oil-Resistant Buna-N Rubber

● Color (Rubber): Black ● Temperature Range: –30° to +200° F ● Tensile Strength (Rubber): 1000 psi ● Use indoors

This oil-resistant Buna-N rubber is bonded to a plastic or metal backing plate, offering stability as well as shock absorption.

Sheets

Rubber only (not laminate) has a durometer hardness of 50A (medium). Durometer tolerance is ±5. Laminate is 1/8″ thick. Width and length tolerances are ±3/8″.

UHMW Polyethylene Laminate—Yield strength is 3,050 psi.

Polypropylene Laminate—Yield strength is 5,200 psi.

Aluminum Alloy 6061 Laminate—Yield strength is 40,000 psi.

To Order Please specify laminate: UHMW polyethylene, polypropylene, or aluminum Alloy 6061.

Abrasion- and Oil-Resistant Buna-N Rubber

● Color: Orange ● Temperature Range: –4° to +230° F ● Tensile Strength: 1000 psi ● Use indoors

Silica fillers increase the abrasion resistance and strength of this Buna-N rubber. Also known as nitrile, acrylonitrile butadiene, and NBR. It has superior resistance to oil and solvents and good resistance to abrasion, acids, alkalies, and permeability of gases.

Sheets and Sheeting—One side is buffed to accept adhesive, one side has a smooth finish.

Sheets have width and length tolerances of ±1/2″. Sheeting has a width tolerance of +1″. Durometer hardness is 52A (medium). Durometer tolerance is ±5.

FDA-Compliant Oil- and Water-Resistant Buna-N/Vinyl Rubber

● Color: White ● Temperature Range: –20° to +220° F ● Tensile Strength: 2000 psi ● Use indoors and outdoors

Get the best qualities of Buna-N and vinyl in this high-strength, oil- and water-resistant blend. Also known as nitrile-vinyl, it's made of FDA-compliant materials and is nonmarking.

Sheets and Sheeting—Smooth Finish

Meet ASTM D2000 BK. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer hardness is 70A (hard). Durometer tolerance is ±5.

Oil-Resistant Vinyl Rubber

● Color: Black ● Temperature Range: 20° to 160° F ● Tensile Strength: 700 psi ● Use indoors and outdoors

Also known as polyvinyl chloride (PVC), this rubber offers good oil resistance in addition to water resistance. Used in gasketing applications.

Sheets and Sheeting—Smooth Finish

Adhesive is acrylic and has a temperature range of 20° to 160° F. Sheets have width and length tolerances of ±1/2″. Sheeting has a width tolerance of ±1/2″. Durometer hardness is 80A (hard). Durometer tolerance is ±5.

Oil-Resistant High-Temperature ECH Rubber

● Color: Black ● Temperature Range: –40° to +250° F ● Tensile Strength: 1200 psi ● Use indoors and outdoors

ECH (epichlorohydrin) rubber provides even better resistance to fuel, oil, and ozone than Buna-N.

Sheets, Sheeting, and Strips—Smooth Finish

Meet ASTM D2000 CH. Sheets and strips have width and length tolerances of ±1/4″. Sheeting has a width tolerance of ±1″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

For information about rubber and durometer hardness scales, see page 3526.

Abrasion-Resistant Natural Gum Rubber

- Color: See below
- Temperature Range: –20° to +180° F, unless noted
- Tensile Strength: See below
- Use indoors

Also known as floating stock, natural rubber (NR) offers excellent resilience and abrasion resistance.

Sheets, Sheeting, and Strips—Smooth Finish

- Color: Tan or off-white
- Temperature Range: –20° to +140° F
- Tensile Strength: *Tan*: 3000 psi; *off-white*: 2800 psi

Meet ASTM D2000 AA. Made of FDA-compliant materials. Sheets and strips have width and length tolerances of ±½″. Sheeting has a width tolerance of ±1″. Durometer hardness is 40A (medium soft). Durometer tolerance is ±5.

Abrasion-Resistant Natural Latex Rubber

- Color: See below
- Temperature Range: –30° to +158° F
- Tensile Strength: 3850 psi, unless noted
- Use indoors

This natural rubber (NR) provides exceptional tear resistance.

Sheets, Sheeting, and Strips—One side is buffed to accept adhesive, one side has a smooth finish.

- Color: Red

Commonly used in slurry handling applications including pipelines, chutes, valve and pump linings, and screen cloths. Made of 95% natural latex rubber. Width tolerance is ±13/32″. Sheets have a length tolerance of ±¼″, except 24″×24″ sheets are ±½″. Strips have a length tolerance of ±¾″. Durometer hardness is 34A (soft). Durometer tolerance is ±3. Maximum continuous length for sheeting is 30 ft.

FDA-Compliant Abrasion-Resistant Natural Latex Rubber

- Color: Off-White
- Temperature Range: –40° to +158° F
- Tensile Strength: 2600 psi
- Use indoors and outdoors

Made from FDA-compliant materials, this natural rubber (NR) is ideal for long-term contact with food.

Sheets and Sheeting—One side is buffed to accept adhesive, one side has a smooth finish.

Width tolerance is ±3/8″. Sheets have a length tolerance of ±1/2″, except 24″ long sheets are ±1″. Durometer hardness is 35A (soft). Durometer tolerance is ±5. Maximum continuous length for sheeting is 30 ft.

Weather- and Abrasion-Resistant Natural Latex Rubber

- Color: Black
- Temperature Range: –40° to +167° F
- Tensile Strength: 2600 psi
- Use indoors and outdoors

Additives make this natural latex rubber resistant to prolonged exposure to sunlight and high ozone concentrations.

Sheets and Strips—One side is buffed to accept adhesive, one side has a smooth finish.

Width tolerance is ±1/2″. Length tolerance is ±3/4″. Durometer hardness is 35A (soft). Durometer tolerance is ±5.

Abrasion-Resistant SBR Rubber

- Color: See below
- Temperature Range: –20° to +170° F
- Tensile Strength: See below
- Use indoors

Also known as styrene butadiene, this basic rubber has properties similar to natural rubber, including good abrasion resistance.

Sheets, Sheeting, and Strips—Smooth Finish

- Color: Black or red
- Tensile Strength: *Black*: 700 psi; *red*: 400 psi

Sheets and strips have width and length tolerances of ±1/2″. Sheeting has a width tolerance of ±1/2″. Durometer hardness is 75A (hard). Durometer tolerance is ±5. ***Red*** rubber meets ASTM D2000 AA.

(Material continued on following page)

For information about rubber and durometer hardness scales, see page 3526.

Abrasion-Resistant SBR Rubber *(Material continued from previous page)*

- Color: Black
- Temperature Range: See below
- Tensile Strength: See below
- Use indoors

Also known as styrene butadiene, this basic rubber has properties similar to natural rubber, including good abrasion resistance.

High-Strength and Ultra-Strength Sheeting—Smooth Finish

- Temperature Range: *High Strength*: –20° to +170° F; *Ultra Strength*: –20° to +200° F
- Tensile Strength: *High Strength*: 1000 psi; *Ultra Strength*: 2500 psi

Also known as skirtboard rubber, this higher-strength SBR offers good wear resistance and is designed to keep materials moving smoothly along conveyors, chutes, and belts. Width tolerance is ±1″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5. Maximum continuous length is 50 ft.

High-strength rubber meets ASTM D2000 AA.
Ultra-strength rubber meets ASTM D2000 BA.

Fabric-Reinforced Abrasion-Resistant SBR Rubber

- Color: Black
- Temperature Range: –20° to +170° F
- Tensile Strength (Rubber): 400 psi
- Use indoors

Our abrasion-resistant SBR rubber is reinforced with layers of fabric, giving it stability and making it ideal for use in flange gaskets.

Sheets and Sheeting—Smooth Finish

Rubber only (not fabric insert) has a durometer hardness of 65A (medium hard). Durometer tolerance is ±5. A lightweight one-ply piece of polyester fabric is inserted for each 1/16″ of thickness. Sheets have width and length tolerances of ±1/2″. Sheeting has a width tolerance of +2″.

Weather-Resistant EPDM Rubber

- Color: Black
- Temperature Range: –40° to +225° F, unless noted
- Tensile Strength: See below
- Use indoors and outdoors

A perfect choice for outdoor use, EPDM (ethylene-propylene-diene monomer) has good weatherability as well as ozone, aging, steam, and water resistance.

Medium-Strength Sheets, Sheeting, and Strips—Smooth Finish

- Tensile Strength: 1000 psi

Rubber only (not adhesive) meets ASTM D2000 BA. Adhesive is acrylic and has a temperature range of 50° to 200° F. Sheets have width and length tolerances of ±1/8″. Sheeting has a width tolerance of +1″. Strips have a width tolerance of ±1/4″ and a length tolerance of +1″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

Medium-Strength Grip-All Sheets and Sheeting—Textured Finish

- Tensile Strength: 1500 psi

Both sides of this rubber have a criss-cross textured finish that provides a superior nonslip gripping surface, ideal for holding an adhesive. Meet ASTM D2000 BA and MIL-R-3065 Grade RS. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer tolerance is ±5.

To Order: Please specify durometer hardness: 40A (medium soft), 60A (medium hard), or 80A (hard).

(Material continued on following page)

For information about rubber and durometer hardness scales, see page 3526.

Weather-Resistant EPDM Rubber *(Material continued from previous page)*

High-Strength Sheets, Sheeting, and Strips—Smooth Finish

- Temperature Range: –55° to +300° F
- Tensile Strength: 1700 psi, except 40A material is 1200 psi, and 50A material is 1500 psi

Meet ASTM D2000 CA. Sheets have width and length tolerances of ±1/8″. Sheeting has a width tolerance of +1″. Strips have a width tolerance of ±1/4″ and a length tolerance of +1″. Durometer tolerance is ±5.

To Order: Please specify durometer hardness: 40A (medium soft), 50A (medium), 60A (medium hard), 70A (hard), or 80A (hard).

FDA-Compliant Weather-Resistant EPDM Rubber

- Color: White
- Temperature Range: –40° to +220° F
- Tensile Strength: 1000 psi, except 40A material is 800 psi
- Use indoors and outdoors

This FDA-compliant version of our water- and weather-resistant EPDM (ethylene-propylene-diene monomer) rubber is safe for food contact and is nonmarking.

Sheets and Sheeting—Smooth Finish

Sheets have width and length tolerances of ±1/8″. Sheeting has a width tolerance of +1″. Durometer tolerance is ±5.

To Order: Please specify durometer hardness: 40A (medium soft), 50A (medium), 60A (medium hard), 70A (hard), or 80A (hard).

Fabric-Reinforced Weather-Resistant EPDM Rubber

- Color: Black
- Temperature Range: –40° to +240° F
- Tensile Strength: 1500 psi
- Use indoors and outdoors

Fiberglass fabric reinforcement increases this rubber's strength and durability. Material also has excellent resistance to water and weather.

Sheets and Sheeting—Smooth Finish

Rubber, but not fabric insert, meets ASTM D2000 BA and has a durometer hardness of 50A (medium). Durometer tolerance is ±5. Sheets have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″.

Weather-Resistant Butyl Rubber

- Color: Black
- Temperature Range: –40° to +225° F
- Tensile Strength: 1500 psi
- Use indoors and outdoors

Commonly used for inner tubes, this rubber has very low permeability to air—it's nearly airtight and gas impermeable. Also known as isobutylene isoprene, it combines good weatherability and oxidation resistance. It also has excellent resistance to alkalies and acids.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber, but not adhesive, meets ASTM D2000 AA. Adhesive is acrylic and has a temperature range of 50° to 180° F. Sheets have width and length tolerances of ±3/32″. Sheeting has a width tolerance of ±1″. Strips have a width tolerance of ±3/16″ and a length tolerance of +1″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

Weather- and Chemical-Resistant Santoprene Rubber

- Color: Black, unless noted
- Temperature Range: –50° to +275° F
- Tensile Strength: 640 psi
- Use indoors and outdoors

This thermoplastic rubber combines characteristics of plastic and rubber to produce a material that offers good weather and chemical resistance while retaining its stretchability.

Sheets, Sheeting, and Strips—Smooth Finish

Sheets have width and length tolerances of ±3/32″. Sheeting has a width tolerance of ±1″. Strips have a width tolerance of ±3/16″ and a length tolerance of +1″. Durometer hardness is 55A (medium). Durometer tolerance is ±5. Maximum continuous length for sheeting is 50 ft.

Ultra-Chemical-Resistant Aflas Rubber

- Color: Black
- Temperature Range: –20° to +400° F
- Tensile Strength: 2550 psi, unless noted
- Use indoors and outdoors

In addition to being our most chemical-resistant rubber, Aflas withstands high temperatures so it's suitable for use in extreme conditions.

Sheets—Smooth Finish

Width and length tolerances are ±1/4″ for 6″×6″ sheets and ±1/2″ for 12″×12″ sheets. Durometer hardness is 75A (hard). Durometer tolerance is ±5.

Thick.	Thick. Tolerance	6″×6″	Each	12″×12″	Each	Thick.	Thick. Tolerance	6″×6″	Each	12″×12″	Each

Extreme-Temperature Silicone Rubber

- Color: Orange to red, unless noted
- Temperature Range: –60° to +400° F, unless noted
- Tensile Strength: 650 psi
- Use indoors and outdoors

If you're looking for good flexibility across a wide temperature range, silicone rubber is the choice for you. Also known as polysiloxane, this material offers good resistance to ozone, sunlight, and oxidation and is a very good electrical insulator.

Sheets and Strips—Smooth Finish

- Temperature Range: *Sheets*: –60° to +500° F; *strips*: –60° to +400° F

Rubber, but not adhesive, meets ASTM D2000 GE and MIL-ZZR-765, Class 2A and 2B. Adhesive is acrylic and has a temperature range of 0° to 180° F. Thickness tolerance is ±0.015″ for 1/32″ thickness, ±0.032″ for 1/16″ to 3/16″ thicknesses, and ±0.046″ for 1/4″ to 1/2″ thicknesses. Sheets have width and length tolerances of ±1 1/8″. Strips have a width tolerance of ±1/32″ and a length tolerance of ±3/4″. Durometer tolerance is ±5. **To Order:** For sheets, please specify durometer hardness: 40A (medium soft), 50A (medium), 60A (medium hard), or 70A (hard). Strips are only available in 50A durometer hardness.

(Material continued on following page)

Extreme-Temperature Silicone Rubber *(Material continued from previous page)*

- Color: Orange to red
- Temperature Range: See below
- Tensile Strength: See below
- Use indoors and outdoors

If you're looking for good flexibility across a wide temperature range, silicone rubber is the choice for you. Also known as polysiloxane, this material offers good resistance to ozone, sunlight, and oxidation and is a very good electrical insulator.

Tubes—Smooth Finish

- Temperature Range: –60° to +500° F
- Tensile Strength: 700 psi

Rubber meets ASTM D2000 GE and MIL-ZZR-765, Class 2A and 2B. Length tolerance is ±3/16″ for 6″ lengths and ±1 1/8″ for 36″ lengths. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5. **To Order:** Please specify 6″ or 36″ length.

Ultra-Strength Silicone Rubber

- Color: See below
- Temperature Range: See below
- Tensile Strength: See below
- Use indoors and outdoors

A special formulation makes this material much more tear resistant while still maintaining its flexibility across a wide temperature range.

Sheets—Smooth Finish

- Color: Orange-red or gray
- Temperature Range: –80° to +400° F
- Tensile Strength: 1200 psi

Rubber, but not adhesive, meets MIL-ZZR-765, Class 2A and 2B. Adhesive is acrylic and has a temperature range of –20° to +180° F. Width and length tolerances are ±1/8″ for 6″×6″ and 12″×12″ sheets and ±3/8″ for 24″×24″ sheets. Durometer hardness is 50A (medium). Durometer tolerance is ±5.

Super-Soft Silicone Rubber

- Color: See below
- Temperature Range: See below
- Tensile Strength: See below
- Use indoors and outdoors

Like other silicone, this rubber stays flexible over a wide temperature range, but its softness gives it better conformability than other rubber.

Sheets and Strips—Smooth Finish

- Color: Orange-red
- Temperature Range: –40° to +300° F
- Tensile Strength: 10A sheets and strips: 200 psi; 20A sheets: 300 psi; 30A sheets: 600 psi

Adhesive is acrylic and has a temperature range of –20° to +180° F. Width and length tolerances are ±1/8″ for 6″×6″ and 12″×12″ sheets and ±1/2″ for 24″×24″ and 36″×36″ sheets. Strips have a width tolerance of ±1/16″ and a length tolerance of ±3/8″. Durometer tolerance is ±5. **To Order:** For sheets, please specify durometer hardness: 10A, 20A, or 30A. 3/16″ thick sheets and 6″×6″ sheets are not available in 30A durometer hardness. Strips are available only in 10A durometer hardness.

Adhesive-Back Film—Textured Finish

- Color: Gray
- Temperature Range: –100° to +500° F
- Tensile Strength: 700 psi

Rubber has a criss-cross textured finish. Adhesive is silicone and has a temperature range of –100° to +500° F. Sheets have width and length tolerances of +1″, –¼″. Sheeting has a width tolerance of ±¼″. Strips have a width tolerance of ±1/16″ and a length tolerance of +6″. Durometer hardness is 30A (soft). Durometer tolerance is ±5.

FDA-Compliant Silicone Rubber

- Color: Orange-red, unless noted
- Temperature Range: –65° to +400° F, unless noted
- Tensile Strength: See below
- Use indoors and outdoors

Made from FDA-compliant materials, this silicone rubber is safe for food contact and maintains its flexibility over a wide temperature range.

Sheets and Strips—Smooth Finish

- Temperature Range: –50° to +500° F
- Tensile Strength: 650 psi

Rubber, but not adhesive, meets ASTM D2000 GE and MIL-ZZR-765, Class 2A and 2B. Adhesive is acrylic and has a temperature range of –20° to +225° F. Width and length tolerances are ±⅜″ for 6″×6″ and 12″×12″ sheets, ±¾″ for 24″×24″ sheets, and ±1⅛″ for 36″×36″ sheets. Strips have a width tolerance of ±1/16″ and a length tolerance of ±1⅛″, except 4″ and 6″ wide strips, which have a width tolerance of ±3/16″. Durometer tolerance is ±5.

To Order: For sheets, please specify durometer hardness: 40A (medium soft), 50A (medium), or 60A (medium hard). Strips are available only in 50A durometer hardness.

NSF-Certified Silicone Rubber

- Color: Translucent
- Temperature Range: –75° to +400° F
- Tensile Strength: 1000 psi
- Use indoors and outdoors

This rubber is made of FDA-compliant materials and is NSF 51 certified for use with food-handling equipment.

Sheets—Smooth Finish

Meet ASTM D2000 GE. Width and length tolerances are ±1/4″. Durometer hardness is 50A (medium). Durometer tolerance is ±5.

Fabric-Reinforced Silicone Rubber

- Color: Red
- Temperature Range: –100° to +500° F
- Tensile Strength (Rubber): 1100 psi
- Use indoors and outdoors

Fiberglass fabric reinforcement makes this rubber stronger and more durable, ideal for stress applications such as gasketing and diaphragm packing.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber, but not fabric insert or adhesive, meets AMS 3320G, except 1/32″ thick rubber. Rubber has a lightweight fiberglass fabric insert in the center of the material. Adhesive is acrylic and has a temperature range of –25° to +250° F. Sheets have a width tolerance of +1″, –1/4″ and a length tolerance of +1″. Sheeting has a width tolerance of +2″. Strips have a width tolerance of ±0.062″ and a length tolerance of +1″. Durometer is 70A (hard). Durometer tolerance is ±10.

Electrically Conductive Silicone Rubber

- Color: Gray
- Temperature Range: –85° to +392° F
- Tensile Strength (Rubber): 800 psi
- Use indoors and outdoors

This silicone rubber contains internal Monel wires and acts as an environmental seal to offer electrical conductivity across a wide temperature range.

Strips—One Side Smooth, One Side Rough Finish

Rubber, but not wire, meets MIL-ZZR-765, Class 2A and 2B and has a durometer of 40A (medium soft). Durometer tolerance is ±7. Width and length have plus tolerances.

For information about rubber and durometer hardness scales, see page 3526.

Corrosion-Resistant Extreme-Temperature Fluorosilicone Rubber

- Color: Blue
- Temperature Range: –65° to +450° F
- Tensile Strength: 900 psi
- Use indoors and outdoors

Better chemical and oil resistance make this material a good alternative to silicone rubber in corrosive conditions.

Sheets—Smooth Finish

Width and length tolerances are +1″, –1/4″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

Corrosion-Resistant Viton® Fluoroelastomer Rubber

- Color: Black
- Temperature Range: –20° to +400° F
- Tensile Strength: 1000 psi
- Use indoors and outdoors

Often designated as FKM, Viton® fluoroelastomer rubber is ideal for use in harsh and corrosive environments. It has exceptional resistance to heat, aging, weather, ozone, oxygen, and sunlight, as well as a broad range of fuels, solvents, and chemicals.

Sheets, Sheeting, and Strips—Smooth Finish

Sheets have width and length tolerances of ±3/16″. Sheeting has a width tolerance of ±1″. Strips have a width tolerance of ±1/4″ and a length tolerance of +1″. Durometer hardness is 75A (hard). Durometer tolerance is ±5.

Ultra-Strength Corrosion-Resistant Viton® Fluoroelastomer Rubber

- Color: Black
- Temperature Range: 0° to 400° F
- Tensile Strength: 1500 psi
- Use indoors and outdoors

Get the high performance of Viton® fluoroelastomer rubber with even greater strength. Ideal for use in harsh and corrosive environments, Viton® fluoroelastomer rubber has exceptional resistance to heat, aging, weather, ozone, oxygen, and sunlight, as well as to a broad range of fuels, solvents, and chemicals.

Sheets, Sheeting, and Strips—Smooth Finish

Rubber, but not adhesive, meets ASTM D2000 HK and MIL-R-83248A, Type 2, Class 1. Adhesive is acrylic and has a temperature range of 0° to 220° F. Sheets and strips have width and length tolerances of ±1/4″. Sheeting has a width tolerance of +1″. Durometer is 75A (hard). Durometer tolerance is ±5.

For information about polyurethane and durometer hardness scales, see page 3526.

Polyurethane

- Color: See below
- Temperature Range: -20° to +185° F, unless noted
- Tensile Strength: See below
- Use indoors, unless noted

Polyurethane bridges the gap between rubber and plastics. It can be softer than a rubber band or as hard as a table top, giving it the characteristics of good vibration damping and shock absorption. Compared to rubber, polyurethane has better abrasion, cut, and tear resistance. Compared to plastics, it has better impact resistance and is not as brittle. Because of its elasticity, it can bounce back to its original shape. It is commonly used for cutting surfaces, cushions, bumpers, covers, wear pads, and liners.

Strips—Smooth Finish

- Color: Black
- Temperature Range: –20° to +160° F
- Tensile Strength: 40A strips are 850 psi; 60A strips are 3000 psi; 90A strips are 5500 psi

Length tolerance is ±1″. Durometer tolerance is ±5.

Plain Back—Width tolerance is ±¼″.

Adhesive Back—Adhesive is acrylic, has a temperature range of –20° to +160° F, and requires 72 hours to reach full strength. Width tolerance is ±⅛″.

To Order: For 36″ wide plain-back strips, please specify durometer hardness: 60A (medium hard) or 90A (extra hard); 6″ and 12″ wide plain-back strips are only available in 90A durometer hardness. For adhesive-back strips, please specify durometer hardness: 40A (medium soft), 60A (medium hard), or 90A (extra hard).

For information about polyurethane and durometer hardness scales, see page 3526.

Polyurethane *(Material continued from previous page)*

Adhesive-Ready Sheets—Smooth Finish

- Color: Black
- Tensile Strength: 4000 psi

One side is shiny and is processed to accept adhesive. Thickness tolerance is ±0.010″ for 1/16″ and 1/8″ thicknesses and ±0.025″ for 1/4″ to 1/2″ thicknesses. Width and length tolerances are ±1/4″. Durometer hardness is 60A (medium hard). Durometer tolerance is ±5.

Film—Smooth Finish

- Color: Translucent white
- Temperature Range: –40° to +225° F
- Tensile Strength: 7000 psi

Also known as die film or brake film, material has a matte (dull) finish on top and bottom. Width tolerance is ±1/4″. Durometer hardness is 85A (hard). Durometer tolerance is ±5.

Thick.	Thick. Tolerance	4″ Wide Max. Lg.	4″ Wide Per Ft.	12″ Wide Max. Lg.	12″ Wide Per Ft.

Adhesive-Back Film—Smooth Finish

- Color: Transparent
- Temp. Range: –40° to +175° F
- Tensile Strength: Not rated
- Use indoors and outdoors

This adhesive-back film protects surface finishes. Adhesive is acrylic and has a temperature range of –40° to +175°F. Width tolerance is ±1/32″. Durometer hardness is 80A (hard). Durometer tolerance is not rated. Maximum continuous length is 108 feet.

Thick.	Thick. Tolerance	1″ Wide Per Ft.	2″ Wide Per Ft.	3″ Wide Per Ft.	4″ Wide Per Ft.	6″ Wide Per Ft.	12″ Wide Per Ft.

(Material continued on following page)

For information about polyurethane and durometer hardness scales, see page 3526.

Polyurethane *(Material continued from previous page)*

Polyurethane bridges the gap between rubber and plastics. It can be softer than a rubber band or as hard as a table top, giving it the characteristics of good vibration damping and shock absorption. Compared to rubber, polyurethane has better abrasion, cut, and tear resistance. Compared to plastics, it has better impact resistance and is not as brittle. Because of its elasticity, it can bounce back to its original shape. It is commonly used for cutting surfaces, cushions, bumpers, covers, wear pads, and liners.

Tubes—Smooth Finish

- Color: Black or amber (varies from translucent to opaque)
- Temperature Range: –20° to +185° F
- Tensile Strength: 40A tubes are 850 psi; 60A tubes are 4000 psi; 80A and 95A tubes are 6500 psi; 90A tubes are 5500 psi; 75D tubes are 7500 psi
- Use indoors

OD tolerance is +0.020″, –0.010″ for 7/8″ to 2″ ODs and ±0.040″ for 2 1/2″ to 4″ ODs. ID tolerance is ±0.020″ for 1/4″ to 2″ IDs and ±0.030″ for 2 1/4″ to 3″ IDs. Length tolerance is +1/4″. Durometer tolerance is ±5. **To Order:** For 1″, 2″, 4″, and 12 1/2″ long tubes, please specify durometer hardness: 80A (hard) or 95A (extra hard). For 6″ and 36″ long tubes, please specify durometer hardness: 40A (medium soft), 60A (medium hard), 80A (hard), 90A (extra hard), 95A (extra hard), or 75D (extra hard), unless noted.

♣ Available only in 80A and 95A durometer hardnesses.

Balls—Smooth Finish

- Color: Black, unless noted
- Temperature Range: –20° to +185° F
- Tensile Strength: 6500 psi
- Use indoors and outdoors

Diameter tolerance is ±0.020″. Durometer hardness is 95A (extra hard). Durometer tolerance is ±5.

★ Color is amber (varies from translucent to opaque).

Soft Polyurethane

- Color: Black
- Temperature Range: –40° to +185° F
- Tensile Strength: 20A sheets are 280 psi; 30A sheets are 380 psi
- Use indoors and outdoors

A softer version of our standard polyurethane, this material offers better conformability but does not offer the same strength.

Sheets—Smooth Finish

Length tolerance is ±1/4″. Durometer tolerance is ±5. **To Order:** Please specify durometer hardness: 20A (soft) or 30A (soft).

For information about polyurethane and durometer hardness scales, see page 3526.

Ultra-Soft Polyurethane

- Color: Black
- Temperature Range: –20° to +160° F
- Tensile Strength: 30 OO material is 83 psi; 40 OO material is 102 psi; 50 OO material is 122 psi; 60 OO material is 166 psi; 70 OO material is 206 psi
- Use indoors and outdoors

Also known as Sorbothane, this nonporous material has a fluid-like consistency and is durable and resilient enough to return to its original shape after repetitive compression. Dampen vibration, absorb shock, and reduce noise with the softest solid polyurethane we offer.

Sheets and Strips—Smooth Finish

Adhesive is acrylic and has a temperature range of 0° to 160° F. Sheets have width and length tolerances of ±0.03″. Strips have a width tolerance of ±0.03″ and a length tolerance of +5″. Durometer tolerance is ±5.

To Order: For sheets, please specify durometer hardness: 30 OO (extra soft), 40 OO (extra soft), 50 OO (soft), 60 OO (soft), or 70 OO (medium soft), unless noted. 4″×4″ and 5″×5″ sheets are not available in 30 OO or 60 OO durometer hardness. Strips are only available in 50 OO durometer hardness.

Durometer Hardness Selector Pack—Includes five plain-back 1½″×3″×3/16″ thick oval pieces, one of each durometer hardness: 30 OO, 40 OO, 50 OO, 60 OO, and 70 OO.

8514K2 ..... **Per Pkg.** $8.11

FDA-Compliant Polyurethane

- Color: Varies from translucent to opaque
- Temperature Range: –40° to +185° F
- Tensile Strength: 60A material is 3000 psi; 70A and 90A material is 4500 psi; 80A material is 6000 psi
- Use indoors

This nonmarking polyurethane is made of FDA-compliant materials, making it safe for contact with food.

Sheets and Strips—Smooth Finish

Meets FDA CFR21 177.2600. Width and length tolerances are ±1/4″. Durometer tolerance is ±5.

To Order: Please specify durometer hardness: 60A (medium hard), 70A (hard), 80A (hard), or 90A (extra hard).

Static Control Polyurethane

- Color: Black
- Temperature Range: –40° to +250° F
- Tensile Strength: 4500 psi
- Use indoors

Protect sensitive electrical equipment from damage caused by static electricity buildup. This material conducts electricity without sacrificing any of its abrasion, cut, and tear resistance. It is nonmarking and does not contain carbon black fillers.

Sheets and Strips—Smooth Finish

Width and length tolerances are ±1/4″. Durometer hardness is 55A (medium). Durometer tolerance is ±5.

Fabric-Backed and Aluminum-Backed Polyurethane

- Color (Polyurethane): Black
- Temperature Range: –40° to +185° F
- Tensile Strength: 4000 psi
- Use indoors and outdoors

The abrasion, cut, and tear resistance of polyurethane gets a boost from the addition of a fabric or metal backing, which adds stability to an elastic material.

Fabric-Backed Sheets and Strips—Smooth Finish

Polyurethane has a durometer of 60A (medium hard). Durometer tolerance is ±5. Fabric backing is 0.040″ thick off-white cotton duck (canvas). Thickness tolerance is ±0.06″. Width and length tolerances are +1/8″, except strips have a length tolerance of +1/4″.

About Foam

Foam is a rubber or plastic that is not completely solid—it contains cells of air. This makes it very lightweight and good for gasketing, sealing, and cushioning applications. Open-cell foams have cells that connect to one another, allowing gas, water, and air to be absorbed and pass through. Closed-cell foams have cells that are completely closed, restricting water, air, and gas from absorbing or passing through. Adhesive-backed foam strips are commonly used as weatherstripping to seal around doors.

Material Selector Pack—Includes one individually marked piece of each of the materials marked with a ★ below. Each piece is approximately 4″×4″. Thicknesses range from 1/8″ to 1/2″.

2172T21 ..... **Pkg.** $43.04

Maximum Temperature

Oil Resistance

A material's ability to maintain its physical properties when it comes in contact with petroleum-based fluids and resist absorption/swelling.

Excellent	Good	Fair
Buna-N, Ionomer, Neoprene/Vinyl/Buna-N, Nylon, Vinyl/Buna-N	ECH, EVA, Neoprene, Polyethylene, Polyimide, Polyurethane, Viton® Fluoroelastomer	Neoprene/EPDM/SBR, Santoprene, Vinyl

Weather Resistance

How well a material withstands exposure to sunlight, oxygen, and ozone without breaking down.

Excellent	Good	Fair
EPDM, Ionomer, Nylon Silicone	Buna-N, ECH, EVA, Neoprene/EPDM/SBR, Neoprene/Vinyl/Buna-N, Polyethylene, Polyurethane, Santoprene, Vinyl, Vinyl/Buna-N, Viton® Fluoroelastomer	Gum, Neoprene

Recovery from Compression

The resilience of a material and its ability to return to its original shape after long-term compression.

Excellent	Good	Fair
ECH, Gum, Ionomer, Santoprene	EPDM, EVA, Neoprene, Polyethylene, Polyimide, Polyurethane, Silicone, Viton® Fluoroelastomer	Buna-N, Neoprene/EPDM/SBR, Neoprene/Vinyl/Buna-N, Nylon, Vinyl/Buna-N

Firmness

Firmness is the amount of pressure required to compress foam to a given percentage (% deflection) of its thickness. It's measured in pounds per square inch (psi). The higher the psi value, the firmer the foam. Firmness is not a measure of how quickly foam will recover after compression.

Firmness Rating Selector Pack—Includes nine samples, one each of the following firmness ratings: 0.3 psi, 0.6 psi, 0.7 psi, 1.4 psi, 2-5 psi, 5-9 psi, 9-14 psi, 15-20 psi, and 30-60 psi. Sizes are 6″×6″. Thicknesses range from 1/32″ to 1/2″.

2172T11 ..... **Pkg.** $34.39

For information about foam and foam firmness ratings, see page 3550.

Weather-Resistant Neoprene/EPDM/SBR Foam

- Color: Black
- Temperature Range: See below
- Restricts absorption (closed cell)
- Use indoors and outdoors

A combination of the best qualities of these materials creates a resilient, weather- and abrasion-resistant foam rubber. It will also extinguish itself once a flame source is removed—making it good for many electrical applications.

Adhesive-Back Strips—Textured Finish

- Temperature Range: –40° to +158° F
- Firmness (25% Deflection): 5-9 psi (soft)
- Density: 5-7 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2A2, UL 94HF1, and UL 94HBF. Material has a fine cell textured finish and does not have a skin. Adhesive is rubber based and has a temperature range of –10° to +150° F. Width tolerance is ±0.031″ for ¼″ to 1″ widths, ±0.063″ for 1¼″ to 4″ widths, and ±0.094″ for 6″ width. Length tolerance is ±3″.

Sheets and Sheeting—Textured Finish

- Temp. Range: –40° to +200° F
- Firmness (25% Deflection): 2-5 psi (extra soft), 5-9 psi (soft), or 9-13 psi (firm)
- Density: Extra soft and soft are 4-8 lbs./cu. ft. and firm is 7-11 lbs./cu. ft.

Foam meets ASTM D1056, UL 94HF1, MIL-C-3133C, and MIL-STD-670B. Material has a fine cell textured finish and does not have a skin. Sheets have a width tolerance of ±1¼″ and a length tolerance of ±2½″. Sheeting has a width tolerance of ±1¼″.

Weather-Resistant EPDM Foam

- Color: Black
- Temperature Range: See below
- Restricts absorption (closed cell), unless noted
- Use indoors and outdoors

This expanded EPDM (ethylene-propylene-diene monomer) offers the best weather resistance of the foam materials.

Adhesive-Back Strips—Textured Finish

- Temp. Range: –40° to +220° F
- Firmness (25% Deflection): 2-5 psi (extra soft)
- Density: 9-14 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2A1. Material has a fine cell textured finish and does not have a skin. Adhesive is acrylic and has a temp. range of –20° to +200° F. Width tolerance is ±1/32″. Length tolerance is ±1 ft.

Thick.	Thick. Tolerance	Length	⅜″ Wide		½″ Wide		¾″ Wide		1″ Wide

Sheeting—Textured Finish

- Temperature Range: –20° to +200° F
- Absorbent (open cell)
- Firmness (25% Deflection): 4-9 psi (soft) or 9-17 psi (firm)
- Density: Soft is 30 lbs./cu. ft. and firm is 35 lbs./cu. ft.

Material has a criss-cross textured finish and a skin on the top and bottom. Sheeting is 36″ wide. Width tolerance is +1″ for ⅛″ to ¼″ thick foam and +3″ for ⅜″ and ½″ thick foam.

(Material continued on following page)

For information about foam and foam firmness ratings, see page 3550.

Weather-Resistant EPDM Foam *(Material continued from previous page)*

- Color: Black
- Temperature Range: See below
- Restricts absorption (closed cell)
- Use indoors and outdoors

This expanded EPDM (ethylene-propylene-diene monomer) offers the best weather resistance of the foam materials.

Cord—Smooth Finish

- Temperature Range: –4° to +167° F
- Firmness (25% Deflection): 9-13 psi (firm)
- Density: 18-24 lbs./cu. ft.

Foam meets ASTM D1056 2A3 and has a skin. Sold in 100-ft. lengths. Length tolerance is ±2 ft.

Dia.	Dia. Tol.			Dia.	Dia. Tol.		
1/8″	±0.020″	8605K41	$16.48	3/8″	±0.032″	8605K43	$31.79

Weather-Resistant Neoprene Foam

- Color: Black
- Temperature Range: See below
- Restricts absorption (closed cell), unless noted
- Use indoors and outdoors

Choose this neoprene foam for its good weather resistance and conformability. It also has fair abrasion resistance, even with rough handling.

Strips—Smooth Finish

- Temperature Range: –40° to +212° F
- Firmness (25% Deflection): 5-9 psi (soft)
- Density: 17 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2C2. Material has a skin on the top and bottom.
Plain-back strips have a width tolerance of ±0.080″. Length tolerance is ±6″.
Adhesive-back strips have an acrylic adhesive that has a temperature range of –40° to +212° F. Width tolerance is ±0.050″. Length tolerance is ±12″.

Sheeting and Sheets—Textured Finish

- Temperature Range: –20° to +160° F
- Firmness (25% Deflection): 2-5 psi (extra soft) or 5-9 psi (soft)
- Absorbent (open cell)
- Density: Extra soft is 27 lbs./cu. ft. and soft is 33 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 1C1 and 1C2. Material has a waffle texture and has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of 0° to +160° F. Sheeting has a width tolerance of +3″. Sheets have width and length tolerances of +3″.

Weather-Resistant High-Temperature Santoprene Foam

- Color: Black
- Temperature Range: –50° to +275° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

This expanded version of Santoprene rubber gives you superior compressibility while still maintaining excellent weatherability.

Cord—Smooth Finish

- Firmness (25% Deflection): 3-5 psi (extra soft)
- Density: 28 lbs./cu. ft.

Foam meets ASTM D1056 and has a skin.
To Order: Please specify length: 5, 10, 25, 50, or 100 ft. Maximum continuous length is 100 ft.

Dia.	Dia. Tolerance		Per Ft.	Dia.	Dia. Tolerance		Per Ft.

Weather-Resistant Reinforced Polyurethane Foam

- Color: Gray
- Temperature Range: Not rated
- Restricts absorption (closed cell)
- Use indoors and outdoors

Reinforced with strands of fiberglass throughout the material, this polyurethane foam provides the toughness required for marine applications.

Sheets—Smooth Finish

- Firmness: Not rated
- Density: 3/8″ and 1/2″ thick sheets are 20 lbs./cu. ft. and 3/4″ and 1″ thick sheets are 26 lbs./cu. ft.

Material does not have a skin. 3/4″ and 1″ thick sheets contain layers of heavy duty fiberglass fabric for added reinforcement. Width and length tolerances are ±1/4″.

Thick.	Thick. Tolerance	48″×48″		Thick.	Thick. Tolerance	48″×48″	
3/8″	±0.031″	5521T11	$82.41	3/4″	±0.031″	5521T13	$142.67
1/2″	±0.031″	5521T12	91.07	1″	±0.031″	5521T14	156.25

For information about foam and foam firmness ratings, see page 3550.

Ultra-Conformable Weather-Resistant Vinyl Foam

- Color: See below
- Temperature Range: See below
- Restricts absorption (closed cell)
- Use indoors and outdoors

The softest foam we offer, this foamed version of weather-resistant vinyl (polyvinyl chloride) is so conformable that once it's compressed it won't fully spring back. It provides a tight seal in inactive applications, such as a window that is rarely opened or an emergency exit.

Adhesive-Back Strips—Smooth Finish

- Color: Gray, black, or yellow
- Temperature Range: –30° to +140° F, except yellow is 40° to 180° F
- Firmness (25% Deflection): Very soft gray is 1.6 psi, extra soft gray and yellow are 2.5 psi, and extra soft black is 4 psi
- Density: Very soft gray is 6 lbs./cu. ft., extra soft gray and yellow are 8 lbs./cu. ft., and extra soft black is 12 lbs./cu. ft.

Thickness tolerance is ±20%. Width tolerance is ±1/32″ for 1/4″ to 1 1/4″ widths and ±3/32″ for 2″ to 6″ widths. Length tolerance is ±6″, except 3-ft. length has a tolerance of ±1/4″, and 60-ft. lengths have a tolerance of ±15″. Adhesive is acrylic and has a temperature range of 50° to 110° F.

Very soft foam has a skin on the face and sides. ***Extra soft*** foam has a skin on the face, except yellow foam, which does not have a skin.

NSF-Certified Adhesive-Back Strip—Textured Finish

- Color: White
- Temperature Range: –15° to +160° F
- Firmness (25% Deflection): 0.1-0.8 psi (very soft)
- Density: 6.5-8.5 lbs./cu. ft.

Foam, but not adhesive, is NSF 51 certified for food equipment. Material has a skin on all sides and has a slightly wrinkled texture. Adhesive is acrylic and has a temperature range of –15° to +160° F. Length tolerance is ±2″. Strip is 25 ft. long.

Thick.	Thick. Tolerance	Width	Width Tolerance		
1/8″	±0.013″	3/8″	±0.038″	1812T21	$20.40

Sheets and Sheeting—Smooth Finish

- Color: Gray
- Temperature Range: –30° to +160° F
- Firmness (30% Deflection): 5 psi (soft)
- Density: 7-10 lbs./cu. ft.

Material has a skin on the top. Width tolerance is ±2″. Length tolerance is ±1″. Adhesive is acrylic and has a temperature range of –20° to +160° F.

Quick-Recovery Natural Gum Foam

- Color: Black
- Temperature Range: –20° to +160° F
- Absorbent (open cell)
- Use indoors and outdoors

This material recovers quickly after being compressed, making it good for sealing applications where quick response is necessary to keep out dust and particles.

Sheeting—Textured Finish

- Firmness (25% Deflection): 2-5 psi (extra soft), 5-10 psi (soft), or 10-16 psi (firm)
- Density: Extra soft is 22 lbs./cu. ft., soft is 26 lbs./cu. ft., and firm is 30 lbs./cu. ft.

Foam meets ASTM D1056 and MIL-C-3133 and MIL-STD-670. Material has a criss-cross texture and has a skin on the top and bottom. Width tolerance is +3″. **To Order:** Please specify firmness: extra soft, soft, or firm.

(Material continued on following page)

Quick-Recovery Natural Gum Foam *(Material continued from previous page)*

- Color: Black
- Temperature Range: –20° to +160° F
- Absorbent (open cell)
- Use indoors and outdoors

This material recovers quickly after being compressed, making it good for sealing applications where quick response is necessary to keep out dust and particles.

Adhesive-Back Strips—Textured Finish

- Firmness (25% Deflection): 5-9 psi (soft)
- Density: 23-29 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056. Material has a waffle finish and does not have a skin. Adhesive is acrylic and has a temperature range of –20° to +160° F. Width tolerance is ±0.03″ for ¼″ to 1½″ widths and ±0.09″ for 2″ to 6″ widths. Length tolerance is ±3″. **To Order:** Please specify 10-ft. or 50-ft. length where prices are shown.

Quick-Recovery Super-Resilient Polyurethane Foam

- Color: Black
- Temperature Range: –40° to +194° F
- Absorbent (open cell)
- Use indoors and outdoors

Also known as Poron urethane, this high-performance foam has the quickest recovery from compression even after extended use. It is ideal for sealing applications when compressed.

Sheets and Strips—Smooth Finish

- Firmness (25% Deflection): 1 to 5 psi (very soft), 4 to 8 psi (soft), 8 to 14 psi (firm), 13 to 23 psi (extra firm), 30 to 60 psi (very firm)
- Density: Very soft, soft, and firm are 15 lbs./cu. ft., extra firm is 20 lbs./cu. ft., and very firm is 30 lbs./cu. ft.

Foam, but not adhesive, meets UL 94HBF (except very firm sheets). Material has a skin on the top and bottom. Adhesive is acrylic based and has a temperature range of –40° to +194° F. Sheets have width and length tolerances of ±1/4″. Strips have a width tolerance of ±1/16″ and a length tolerance of ±12″.

Super-Resilient Extreme-Temperature Silicone Foam

- Color: See below
- Temperature Range: –60° to +392° F, unless noted
- Use indoors and outdoors

Like solid silicone, this foam maintains its flexibility in temperature extremes. It also provides the best recovery from compression, even after extended use.

Adhesive-Back Strips—Textured Finish

- Color: Gray
- Firmness (25% Deflection): 1-6 psi (extra soft)
- Absorbent (combination of open cell and closed cell)
- Density: 12 lbs./cu. ft.

Foam, but not adhesive, meets UL 94V0, except 1/16″ thick foam. Material has a criss-cross textured finish and has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of –20° to +325° F. Width tolerance is ±1/16″. Length tolerance is +18″ for 15-ft. lengths and +36″ for 30-ft. lengths.

Thick.	Thick. Tolerance	Length	1/2″ Wide		3/4″ Wide		1″ Wide		2″ Wide

Sheets and Strips—Textured Finish

- Color: Orange-red
- Temperature Range: –103° to +450° F
- Restricts absorption (closed cell)
- Firmness (25% Deflection): 4-10 psi (soft), 6-14 psi (firm), or 12-20 psi (extra firm)
- Density: Soft is 31 lbs./cu. ft., firm is 35 lbs./cu. ft., and extra firm is 52 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2D. Material has a criss-cross textured finish and a skin on the top and bottom. Adhesive is acrylic and has a temperature range of –30° to +220° F. Width and length tolerances are ±3%.

To Order: For sheets, please specify soft (unless noted), firm, or extra firm. Strips are available only in soft.

Firmness Selector Pack— Includes three 6″×6″ sheets, one of each firmness rating. Thicknesses range from 1/16″ to 1/2″. One sheet includes a sample of the adhesive backing.

Sheets and Sheeting—Smooth Finish

- Color: White
- Absorbent (open cell)
- Firmness (25% Deflection): 1-5 psi (extra soft)
- Density: 12 lbs./cu. ft.

Foam, but not adhesive, meets UL 94HF1 and UL 94V0, except 1/16″ and 3/32″ thick foam, which only meet UL 94HF1. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of –25° to +300° F. Width and length tolerances are ±1/8″ for 6″×6″ and 12″×12″ sheets and +1″, –1/4″ for 24″×24″ and 36″×36″ sheets. Sheeting has a width tolerance of ±1/4″.

Sheets and Sheeting with Aluminized Face—Smooth Finish

- Color: White
- Absorbent (open cell)
- Firmness (25% Deflection): 1-5 psi (extra soft)
- Density: 12 lbs./cu. ft.

Foam, but not adhesive or fiberglass, meets UL 94HF1 and UL 94V0, except 0.1″ thick foam, which only meets UL 94HF1. Foam has a 0.004″ thick piece of aluminized fiberglass on one face that reflects radiant heat. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of –25° to +300° F. Thickness tolerance is ±0.020″ for 0.1″ thick foam and ±0.040″ for 0.2″ thick foam. Width and length tolerances are ±1/8″ for 12″×12″ sheets and +1″, –1/4″ for 24″×24″ and 36″×36″ sheets. Sheeting has a width tolerance of ±1/4″.

For information about foam and foam firmness ratings, see page 3550.

Extreme-Temperature Silicone Foam

- Color: See below
- Temperature Range: See below
- Restricts absorption (closed cell)
- Use indoors and outdoors

Also known as polysiloxane, this material maintains its flexibility across a very wide temperature range and is a good electrical insulator.

Adhesive-Back Strips—Smooth Finish

- Color: Orange-tan
- Temperature Range: –100° to +400° F
- Firmness (25% Deflection): 6-14 psi (soft to firm)
- Density: 29-48 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2A3. Material has a skin on all sides. Adhesive is acrylic and has a temperature range of –20° to +180° F. Width tolerance is ±0.15″. Length tolerance is ±3″ for 3-ft. lengths and ±6″ for 15-ft. lengths.

Adhesive-Back Strips—Textured Finish

- Color: Orange-tan
- Temperature Range: –100° to +500° F
- Firmness (25% Deflection): 6-14 psi (soft to firm)
- Density: 29 lbs./cu. ft.

Material has a criss-cross textured finish and has a skin on the top and bottom. Adhesive is silicone and has a temperature range of –100° to +500° F. Width tolerance is ±0.15″. Length has a plus tolerance.

Sheets—Textured Finish

- Color: Orange-red
- Temperature Range: –100° to +450° F
- Firmness (25% Deflection): Foam with fine cell finish is 0.5-5 psi (extra soft) or 5-9 psi (soft); foam with criss-cross finish is 5-9 psi (soft), 9-14 psi (firm), or 15-20 psi (extra firm)
- Density: Foam with fine cell finish is 8 lbs./cu. ft. for extra soft and 12 lbs./cu. ft. for soft; foam with criss-cross finish is 32 lbs./cu. ft. for soft, 35 lbs./cu. ft. for firm, and 45 lbs./cu. ft. for extra firm

Foam, but not adhesive, meets ASTM D1056 2D0, 2D1, and 2D2 for fine cell finish and ASTM D1056 2D2, 2D3, and 2D4 for criss-cross finish. Adhesive is acrylic and has a temperature range of 50° to 187° F. Width and length tolerances are ±3% for sheets with a fine cell finish and ±1″ for sheets with criss-cross finish. Sheets with criss-cross finish have a skin on the top and bottom.

To Order: For fine cell textured sheets, please specify extra soft or soft. For criss-cross textured sheets, please specify soft (except 1/16″ thick), firm, or extra firm.

Fabric-Reinforced Silicone Foam

- Color: Blue-gray
- Temperature Range: –100° to +500° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

Internal reinforcement adds strength to this foam and makes it perfect for high-stress applications such as gasketing and diaphragm packing.

Adhesive-Back Strips—Textured Finish

- Firmness (25% Deflection): 8-16 psi (firm)
- Density: 35 lbs./cu. ft.

Foam is reinforced in the center with fiberglass fabric. Material has a criss-cross textured finish and a skin on the top and bottom. Adhesive is acrylic and has a temperature range of –20° to +325° F. Width tolerance is ±1/16″. Length has a plus tolerance.

For information about foam and foam firmness scales, see page 3550.

FDA-Compliant Silicone Foam

- Color: Orange-red
- Temperature Range: –103° to +450° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

Made of FDA-compliant materials, this silicone foam is safe for contact with food. It maintains flexibility across a wide temperature range.

Sheets—Textured Finish

- Firmness (25% Deflection): 9-14 psi (firm)
- Density: 35 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2D3. Material has a criss-cross textured finish and a skin on the top and bottom. Adhesive is acrylic and has a temperature range of –30° to +220° F. Thickness tolerance is ±0.046″. Width and length tolerances are ±3/8″ for 6″×6″, 12″×12″, and 24″×24″ and ±1 1/8″ for 36″×36″ sheets.

Fire-Retardant Silicone Foam

- Color: Gray
- Temperature Range: –103° to +450° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

A special formulation makes this silicone foam fire retardant. It stays flexible across a wide range of temperatures.

Sheets—Smooth Finish

- Firmness (25% Deflection): 1.5-5 psi (extra soft)
- Density: 10 lbs./cu. ft.

Foam, but not adhesive, is fire retardant and meets UL 94V1 and UL 945VA. Adhesive is acrylic and has a temperature range of –103° to +275° F. Width and length tolerances are ±3%.

Abrasion-Resistant Fabric-Faced Neoprene Foam

- Color (Foam): Black
- Temperature Range: 15° to 150° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

The same material found in wet suits, this neoprene foam is covered with nylon fabric, which makes it stretchy and gives it extra abrasion resistance.

Sheets—Smooth Finish

- Firmness (25% Deflection): Not rated
- Density: 11 lbs./cu. ft.

A layer of black nylon fabric covers each side of the foam. Width tolerance is ±2 1/2″. Length tolerance is ±4 1/4″ for 83″ long sheets and ±6 1/2″ for 130″ long sheets.

Abrasion-Resistant Fabric-Backed Natural Gum Foam

- Color (Foam): Black
- Temperature Range: –20° to +160° F
- Absorbent (open cell)
- Use indoors and outdoors

The original mouse pad material. This soft, conformable foam has a fabric backing that provides better abrasion resistance and allows for easier application of adhesives.

Sheeting—Textured Finish

- Firmness (25% Deflection): 5-10 psi (soft)
- Density: 26 lbs./cu. ft.

Foam, but not fabric, meets ASTM D1056. One side of this foam has a waffle finish and a skin; the other side is covered with a layer of white polyester fabric. Width has a plus tolerance.

Thick.	Thick. Tolerance	Max. Lg.	54″ Wide	Per Ft.
1/8″	±0.015″	150 ft.	1805T32	$13.33

Polyimide & Viton® Fluoroelastomer Foam

For information about foam and foam firmness ratings, see page 3550.

Extreme-Temperature Polyimide Foam

- Color: Yellow/gold
- Temperature Range: –300° to +400° F
- Absorbent (open cell)
- Use indoors

This very lightweight foam is soft and conformable even at extreme temperatures.

Sheets—Textured Finish

- Firmness (50% Deflection): 1.3 psi (very soft)
- Density: 0.4 lbs./cu. ft.

Foam meets ASTM E84 0/5 for flame and smoke. Material has a coarse-cell textured finish and does not have a skin. Width and length tolerances are ±5/32″.

Thick.	Thick. Tolerance	24″ Wd. × 48″ Lg.		Thick.	Thick. Tolerance	24″ Wd. × 48″ Lg.

Corrosion-Resistant Viton® Fluoroelastomer Foam

- Color: Black
- Temperature Range: –10° to +400° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

Ideal for use in harsh and corrosive environments, this foam version of Viton® fluoroelastomer rubber has exceptional resistance to heat, aging, weather, ozone, oxygen, and sunlight.

Sheets—Smooth Finish

- Firmness (25% Deflection): 4-7 psi (extra soft to soft)
- Density: 10-19 lbs./cu. ft.

Material has a skin on all sides. Width and length tolerances are ±5/32″ for 6″×6″ sheets and ±1/4″ for 12″×12″ and 12″×24″ sheets.

Oil-Resistant Neoprene/Vinyl/Buna-N Foam

- Color: Black
- Temperature Range: –40° to +200° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

Blending neoprene, vinyl, and Buna-N produces this foam with excellent oil resistance and fire retardancy.

Adhesive-Back Strips—Textured Finish

- Firmness (25% Deflection): 2-5 psi (extra soft)
- Density: 4-6 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2C1 and 2C2 and UL 94HF1. Material has a coarse-cell textured finish and does not have a skin. Adhesive is acrylic and has a temperature range of –40° to +200° F. Width tolerance is ±1/16″. Length tolerance is ±1 1/2 ft.

Thick.	Thick. Tolerance	Length	3/8″ Wide		1/2″ Wide		3/4″ Wide		1″ Wide		2″ Wide

Oil-Resistant High-Temperature ECH Foam

- Color: Black
- Temperature Range: –20° to +300° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

This expanded version of ECH offers better compressibility while still providing the same qualities of solid ECH rubber, including resistance to fuels and oils, as well as high temperatures.

Sheets—Textured Finish

- Firmness (25% Deflection): 2-5 psi (extra soft), 5-9 psi (soft), 9-13 psi (firm)
- Density: Extra soft and soft foam are 12-18 lbs./cu. ft., and firm foam is 15-21 lbs./cu. ft.

Foam meets ASTM D1056 2B. Material has a fine-cell textured finish and does not have a skin. Width and length tolerances are ±1 1/2″.

For information about foam and foam firmness ratings, see page 3550.

Oil- and Water-Resistant Vinyl/Buna-N Foam

- Color: *Very soft* and *extra soft* are black; *firm* is gray
- Temperature Range: See below
- Restricts absorption (closed cell)
- Use indoors and outdoors

This soft and conformable material combines the best qualities of vinyl and Buna-N rubber into a high-strength, oil- and water-resistant foam. It is impact resistant and is ideal for weatherstripping applications.

Adhesive-Backed Strips—Textured Finish

Extra Soft

- Temperature Range: –20° to +175° F
- Firmness (25% Deflection): 2-4 psi (extra soft) or 9-15 psi (firm)
- Density: *Extra soft* is 4-5.5 lbs./cu. ft.; *firm* is 10-15 lbs./cu. ft.

Material meets ASTM D1056 and does not have a skin. Adhesive is acrylic and has a temperature range of –20° to +175° F. Width tolerance is ±1/16″. Length tolerance is ±2½ ft. Strips are 50 feet long. ***Extra soft*** strips have coarse cells and are compressible. ***Firm*** strips have fine cells and are compression resistant.

Oil-Resistant Buna-N Foam

- Color: Black
- Temperature Range: –40° to +200° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

Get the properties of Buna-N rubber in a soft and conformable foam. Buna-N rubber is also known as nitrile, acrylonitrile butadiene, and NBR. It has superior resistance to oils and solvents, plus good resistance to abrasion, acids, alkalies, and permeability of gases. Not very weather resistant.

Sheets—Smooth Finish

- Firmness (25% Deflection): 2-5 psi (extra soft)
- Density: 10-17 lbs./cu. ft.

Material meets ASTM D1056 2B1 and does not have a skin. Width tolerance is ±1¼″. Length tolerance is ±2¹⁄₁₆″.

Neoprene Rubber Mesh

A diamond-pattern mesh of neoprene forms a non-skid matting that allows fluid to flow through. This soft, pliable mesh conforms to irregular surfaces. Each diamond shape is approximately 23/64″×23/64″. Mesh has a minimum thickness of 1/8″ and a maximum thickness of 1/8″-5/32″. Maximum temperature is 230° F.

To Order: Please specify color: black, green, or red.

Width	Roll Length		Per Ft. 1-49	Per Ft. 50-Up
26″	50 ft.	9310T11	$8.97	$6.73
36″	50 ft.	9310T12	10.58	8.39

Polyester/Vinyl Foam Mesh

This washable, moisture- and bacteria-resistant, and fire-retardant foam consists of hundreds of small pillows per foot to keep items firmly in place. Made from a polyester scrim coated with vinyl. Temperature range is –20° to +140° F.

To Order: Please specify length in 5-ft. increments.

Thick.	Width	Color	Max. Lg.		Per Ft.

Ultra-Elastic Clear Gel Rubber

- Color: Clear
- Temperature Range: Not rated
- Tensile Strength: Not rated
- Use indoors and outdoors

Material has a gel-like consistency to absorb vibration and conform to irregular surfaces. It is also super stretchy.

Sheets—Smooth Finish

Made from latex-free TPE (thermoplastic elastomer). It is nonallergenic. Thickness has a plus tolerance.

Thick.	12″×12″		24″×24″	
1/4″	1782T54	$47.66	1782T56	$97.83
1/2″	1782T64	59.41	1782T66	107.14

For information about foam and foam firmness ratings, see page 3550.

Super-Cushioning Polyurethane Foam

- Color: Charcoal, unless otherwise stated
- Temperature Range: –20° to +180° F, unless otherwise stated
- Absorbent (open cell)
- Use indoors

Flexible and resilient, this foam cushions, dampens, and isolates. Use for packaging, insulating, and similar applications.

Sheets and Sheeting—Textured Finish

- Color and Density: See chart
- Firmness (25% Deflection): Very soft (see chart)

	Plain Back					Adhesive Back
Firmness Rating	1	2	3	4	5	2

Egg-Crate Sheets—Textured Finish

- Firmness (25% Deflection): 0.6 psi (very soft)
- Density: 1.5 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Height tolerance is ±1/8″. Width and length tolerances are ±1/4″. Sheets nest together in a set of two.

Peak Height	Base Height	18″×24″	Set	24″×36″	Set
2″	1/2″	85365K43	$22.38	85365K47	$34.79
3″	1/2″	85365K51	27.40	85365K55	47.53

Cubes on a Scored Sheet—Textured Finish

- Temperature Range: Not rated
- Firmness (25% Deflection): Not rated
- Density: 1.5-1.6 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Square tolerance is ±1/8″.

Thick.	Thick. Toler.	Cube Size	No. of Cubes	12″×12″	
1″	±0.125″	5/8″ sq.	361	3157T21	$6.77
				24″×24″	
1″	±0.125″	1″ sq.	576	3157T22	$22.97

Square Bars and Strips—Textured Finish

- Color: *Square bars* are charcoal; *strips* are white
- Temperature Range: –20° to +180° F for *square bars*; 180° F max. (low end not rated) for *strips*
- Firmness (25% Deflection): *Square bars* are 0.3 psi (very soft); *strips* are not rated
- Density: *Square bars* are 1 lb./cu. ft.; *strips* are not rated

Material has a fine-cell textured finish and does not have a skin. ***Square bars*** have a length tolerance of ±1/4″. ***Adhesive-back strips*** have a plus tolerance for thickness, width, and length. Adhesive is acrylic and has a maximum temperature of 110° F.

SQUARE BARS

Square Size	Square Tolerance	Length		
1 1/4″	±0.063″	3 1/2 ft.	93665K41	$2.84
2 1/4″	±0.063″	3 1/2 ft.	93665K42	5.73

For information about foam and foam firmness ratings, see page 3550.

Water-Resistant Super-Cushioning Polyurethane Foam

- Color: Charcoal
- Temperature Range: –20° to +200° F
- Restricts absorption when compressed
- Use indoors and outdoors

Ideal for weatherstripping, this conformable material has an open-cell construction, yet it seals like closed-cell foam by restricting water absorption when fully compressed.

Sheets and Strips—Textured Finish

- Firmness (25% Deflection): 0.6-0.9 psi (very soft)
- Density: 2 lbs./cu. ft.

Foam meets UL 94HF1. Material has a fine-cell textured finish and does not have a skin. ***Sheets*** have width and length tolerances of ±¼″, except for 120″ long sheets, which have a length tolerance of ±5″. ***Strips*** have a width tolerance of ±1/32″ and a length tolerance of ±5″. ***Adhesive-back*** sheets and strips have a rubber-based adhesive with a temperature range of –20° to +160° F. Adhesive does not meet UL 94HF1.

Fire-Retardant Super-Cushioning Polyurethane Foam

- Color: Charcoal
- Temperature Range: –40° to +225° F
- Absorbent (open cell)
- Use indoors

Diminish the possibility of spreading fire. When this material (also known as Pyrell) is exposed to flame, its surface chars, creating a protective barrier that prevents melting and dripping.

Sheeting—Textured Finish

- Firmness (25% Deflection): 0.7 psi (very soft)
- Density: 2 lbs./cu. ft.

Foam meets UL 94HF1. Material has a fine-cell textured finish and does not have a skin. Width tolerance is ±2″. Length tolerance is ±1″. Lengths are spliced for ¼″ and ½″ thick sheeting. ***Adhesive-back*** sheeting has a rubber-based adhesive with a temperature range of –20° to +180° F. Adhesive does not meet UL 94HF1.

Thick.	Thick. Tolerance	Width	Max. Length	Plain Back	Per Ft.	Adhesive Back	Per Ft.

Slow-Recovery Super-Cushioning Polyurethane Foam

- Color: Blue, green, pink, or yellow
- Temperature Range: 50° to 120° F
- Absorbent (open cell)
- Use indoors

Also known as Confor, this very soft material takes several seconds to return to its original shape after compression but maintains its resilience even after extended use.

Sheets—Textured Finish

- Firmness (25% Deflection): Very Soft
- Density: 5.8 lbs./cu. ft.

Softness Rating	1	2	3	4
Color	Yellow	Pink	Blue	Green

Softness ratings 1-4 are all considered very soft. Rating 1 is the softest; as the rating increases, the material's firmness increases slightly. Foam meets UL 94HBF. Material has a coarse-cell textured finish and does not have a skin. Width and length tolerances are ±¼″. **To Order:** Please specify color.

Selector Block—Includes 1″ strips of each firmness. Block is 5″×5″×1″.

86195K1 ..... **Pkg.** $6.81

Super-Absorbent Super-Cushioning Polyurethane Foam

- Color: White
- Temperature Range: –20° to +180° F
- Absorbent (open cell)
- Use indoors

Quickly absorb, hold, and release liquids. Also known as Aquazone, this spongelike material can retain up to 30 times its weight in liquid.

Sheets—Textured Finish

- Firmness (25% Deflection): 0.6 psi (very soft)
- Density: 1.8 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Width and length tolerances are ±⅛″.

Thick.	Thick. Tolerance	12″×12″		24″×24″		48″×48″

2″	±0.063″	8884K46	24.74	8884K56	67.47	8884K66	224.90

For information about foam and foam firmness ratings, see page 3550.

Antistatic Super-Cushioning Polyurethane Foam

- Color: Pink
- Temperature Range: –20° to +180° F
- Absorbent (open cell)
- Use indoors

Protect sensitive electrical equipment from damage. This foam prevents static electricity buildup by conducting it away. Surface resistivity is 10^{11} ohms/sq.

Sheets—Textured Finish

- Firmness (25% Deflection): 0.3 psi (very soft)
- Density: 1.4 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Thickness tolerance is ±0.031″ for 1/8″ and 1/4″ thicknesses, ±0.063″ for 3/8″-3/4″, and ±0.125″ for 1″ and 1 1/2″. Width and length tolerances are ±1/4″.

Firm-Backed Super-Cushioning Polyurethane/Polyethylene Foam

- Color: Black
- Temperature Range: –20° to +160° F
- Polyurethane face is absorbent (open cell); polyethylene backing restricts absorption (closed cell)
- Use indoors

An extra-soft polyurethane face provides excellent cushioning. A firm polyethylene backing provides support and shock absorption and resists moisture, mildew, and chemicals.

Sheets—Textured Finish

- Firmness (25% Deflection): polyurethane side is 1 psi (extra soft); polyethylene side is 9 psi (firm)
- Density: Approx. 2 lbs./cu. ft.

Polyurethane side has a fine-cell texture; polyethylene side has a coarse-cell texture. Material does not have a skin. Thickness tolerance is ±0.063″. Width and length tolerances are ±1/8″.

Thick.	12″×12″		24″×24″		24″×48″	
1″	85105K15	$9.83	85105K35	$32.77	85105K55	$54.61

Chemical-Resistant Polyethylene Foam

- Color: See below
- Temperature Range: –20° to +160° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

Chemical and moisture resistance make this material, also known as Ethafoam, a good choice for insulating and packaging.

Sheets—See table for finish

- Color: Blue, charcoal, or white
- Firmness (25% Deflection): *Blue* is 7 psi (soft); *charcoal* and *white* are 9 psi (firm)
- Density: *Blue* is 1.8 lbs./cu. ft.; *charcoal* and *white* are 2.2 lbs./cu. ft.

Material has a coarse-cell construction. Sheets with a textured finish do not have a skin; sheets with a smooth finish have a skin on top and bottom. Thickness tolerance is ±0.063″ for textured finish and ±0.375″ for smooth finish. Width and length tolerances are ±1″. ***Laminated sheets*** have a charcoal side and a blue side.

Adhesive-Backed Strips—Smooth Finish

- Color: White
- Firmness (25% Deflection): 5 psi (soft)
- Density: 2 lbs./cu. ft.

Material has a fine-cell smooth-textured finish and has a skin on top. Adhesive is rubber based and has a temperature range of 0° to +150° F. Thickness tolerance is ±0.019″, except 1/4″ thick has a ±0.025″ tolerance. Width tolerance is ±5/16″. Length tolerance is +12″.

Cord—Textured Finish

- Color: Gray
- Firmness (25% Deflection): 4 psi (extra soft)
- Density: 2 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Diameter tolerance is ±0.040″. Length has a plus tolerance.

Dia.	20-ft. Length		250-ft. Length	
3/8″	93295K31	$4.08	93295K41	$31.50
1/2″	93295K33	4.68	93295K43	34.12
5/8″	93295K35	6.79	93295K45	44.29

Antistatic Chemical-Resistant Polyethylene Foam

- Color: Pink
- Temperature Range: –20° to +160° F
- Restricts absorption (closed cell)
- Use indoors

This material is great for protecting sensitive electrical equipment because it is designed to eliminate electrostatic potential from the foam itself and to dissipate electrostatic discharges from other sources. Surface resistivity is 10^{12} ohms/sq.

Sheets—Textured Finish

- Firmness (25% Deflection): 9 psi (firm)
- Density: 2.2 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Width and length tolerances are ±1/8″.

Thick.	Thick. Tolerance	12″×12″		24″×36″		Thick.	Thick. Tolerance	12″×12″		24″×36″

(Material continued on following page)

For information about foam and foam firmness ratings, see page 3550.

Antistatic Chemical-Resistant Polyethylene Foam *(Material continued from previous page)*

Sheeting—Textured Finish

- Firmness (25% Deflection): 9 psi (firm)
- Density: 1.8 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Width tolerance is ±1″.

Thick.	Thick. Tolerance	Max. Length	48″ Wide	Per Ft.
1/8″	±0.013″	500 ft.	8726K91	$3.24
1/4″	±0.025″	250 ft.	8726K92	4.84
1/2″	±0.063″	125 ft.	8726K93	$8.89

Tear- and Chemical-Resistant Polyethylene Foam

- Color: See below
- Temperature Range: See below
- Restricts absorption (closed cell)
- Use indoors and outdoors

Cross-linked at the molecular level, this chemical- and moisture-resistant material offers superior tear resistance when compared to our other polyethylene foams. Its flexibility and conformability make it a common choice for packaging and insulating applications.

Sheets and Sheeting—Smooth Finish

- Color: Black or white
- Temperature Range: –110° to +158° F
- Firmness (25% Deflection): *Soft* is 5 psi; *firm* is 9 psi
- Density: *Soft* is 2 lbs./cu. ft.; *firm* is 4 lbs./cu. ft.

Made of FDA-compliant material, foam has a skin on the top and bottom. Thickness tolerance is ±15% and width tolerance is ±1″. Sheets have a length tolerance of ±1″. ***Adhesive-back*** sheets and sheeting have a rubber-based adhesive with a temperature range of 0° to 140° F.

To Order: Please specify color: black or white.

Sheets—Textured Finish

- Color: Charcoal or white
- Temperature Range: –20° to +160° F
- Firmness (25% Deflection): 7 psi (soft)
- Density: 2 lbs./cu. ft.

These sheets continue to provide impact resistance even after prolonged use. Material has a fine-cell textured finish. Thickness tolerance is ±0.063″. Width and length tolerances are ±1/8″. ***Adhesive-back*** sheets have an acrylic adhesive with a temperature range of –20° to +160° F.

To Order: Please specify color: charcoal or white.

Super-Tough Ionomer Foam

- Color: See below
- Temperature Range: –85° to +175° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

This strong foam offers excellent resistance to impact, UV, weather, and water absorption, while maintaining flexibility and conformability.

Sheets and Sheeting—Textured Finish

- Firmness (25% Deflection): *Firm* is 10.9 psi; *extra firm* is not rated
- Density: *Firm* is 3 lbs./cu. ft.; *extra firm* is 4 lbs./cu. ft.

Material has a medium-cell textured finish and has a skin on the top and bottom. Thickness tolerance is ±0.05″. Width and length tolerances are ±1/2″.

Foam Type	Thick.	Color	24″×24″		48″×50″

Water- and Tear-Resistant EVA Foam

- Color: Black
- Temperature Range: –70° to +160° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

Moisture resistance and high tear resistance make EVA (ethylene vinyl acetate) good for sealing applications.

Sheets—Textured Finish

- Firmness (25% Deflection): 4 psi (soft)
- Density: 2 lbs./cu. ft.

Material has a fine-cell textured finish and does not have a skin. Thickness tolerance is ±0.063″, except 1/8″, which has a ±0.031″ thickness tolerance. Width and length tolerances are ±1/8″.

Thick.	12″×12″		29″×47″

High-Temperature Chemical-Resistant Nylon Foam

- Color: Charcoal
- Temperature Range: –40° to +400° F
- Restricts absorption (closed cell)
- Use indoors and outdoors

This cross-linked nylon 6 foam is ideal for use where resistance to oils, fuels, and high temperatures is required.

Sheets—Smooth Finish

- Firmness (25% Deflection): 28 psi (very firm)
- Density: 3.2 lbs./cu. ft.

Material does not have a skin. Thickness tolerance is ±0.033″. Length and width tolerances are ±1/8″.

Polysulfone	3607
PPS	3608
PTFE	3603-3605
PVC (Type I, Type II, CPVC)	3573-3577
PVDF (Kynar)	3606
Radel	3606
Rulon	3605
Teflon® PTFE	3600-3602
Torlon (Polyamide-imide)	3609
Turcite	3588
UHMW, VHMW Polyethylene	3595-3599
Ultem (Polyetherimide)	3607
Vespel® Polyimide	3609

***Material Identification Kit*—**Identify plastics in just minutes. Kit contains 50 resin sample chips with technical data and tools for conducting burn tests. It uses opacity vs. transparency, rigidity vs. flexibility, and surface feel to identify plastics. Burn tests confirm results.

5331K4 ..... **Each** $273.33

***Thermoplastics Material Selector Pack*—**You'll get one individually marked piece of ABS, cast acrylic, acetate, Delrin® acetal resin, PTFE, nylon 6/6, polycarbonate, polyester (PET), UHMW polyethylene, polypropylene, polystyrene, and PVC Type I. Each piece is approximately 4″×4″ to 6″×6″ and ¼″ to ½″ thick, except for acetate, which is 0.020″ thick.

5331K1 ..... **Pack** $143.70

Temperature

***Temperature Selector Pack*—**Contains one individually marked piece of PTFE, polysulfone, PEEK, Torlon, and Ultem. Pieces are approximately 1″×1″ to 6″×6″ and ¼″ to ⅜″ thick. ..... **5331K25** **Pack** $170.98

High Tensile Strength Plastics

The amount of stretching a material can withstand before breaking.

***Tensile Strength Selector Pack*—**Contains one individually marked piece of Delrin® acetal resin, nylon 6/6, and polyester. Pieces are 6″×6″ and ¼″ to ½″ thick. ..... **5331K11** **Pack** $48.77

High Impact Strength Plastics

The ability to withstand shock loading. Determined by the notched Izod test, which measures the effect on a material when it is struck by a swinging pendulum. "No Break" means the material was not broken during testing.

***Impact Strength Selector Pack*—**Contains one individually marked piece of polycarbonate, ABS, UHMW polyethylene, and Noryl. Pieces are approximately 6″×6″ and ¼″ to ½″ thick. ..... **5331K21** **Pack** $36.76

Slippery Plastics

A lower coefficient of friction indicates a material that moves more easily, or with less friction.

***Slippery Plastics Selector Pack*—**Contains one individually marked piece of PTFE, nylon 6/6, Delrin® acetal resin, and UHMW polyethylene. Pieces are approximately 6″×6″ and ¼″ to ½″ thick. ..... **5331K41** **Pack** $72.75

Impact-Resistant Clear and Colored Polycarbonate

- Color: Clear, unless noted
- Temp. Range: –40° to +200° F, unless noted
- Softening Temp.: 290° to 315° F
- Tensile Strength: Good, unless noted
- Impact Strength: Excellent, unless noted
- Poor electrical insulator
- Use indoors and outdoors, unless noted
- Machine with carbide tooling; cut *film* with scissors
- Hardness: Rockwell R118-R126

Comparable to Lexan, Hyzod, Tuffak, and Makrolon. At only half the weight of glass, this material maintains excellent clarity and impact strength over a wide temperature range. Often used as windows, instrument gauge covers, machine guards, and signs.

Clear Sheets—Smooth Finish, unless otherwise indicated

- Use *FDA Compliant* indoors

Sheets 0.06″ to 0.177″ thick meet UL 94V2 and sheets 0.236″ to 2″ thick meet UL 94V0 for flammability. All sheets are UL 972 rated as burglar resistant. Width and length tolerances are ±¼″.

Tinted Sheets—Smooth Finish

- Color: Translucent bronze or gray

Tint reduces light transmittance to 50% and decreases heat transmittance. UL 972 rated as burglar resistant. Width and length tolerances are ±¼″. Sheets 1/8″ and 3/16″ thick meet UL 94V2; sheets 1/4″ thick meet UL 94V0 for flammability. **To Order:** Please specify tint: bronze or gray.

Impact-Resistant Clear and Colored Polycarbonate *(Material continued from previous page)*

- Color: Clear, unless noted
- Temp. Range: –40° to +200° F, unless noted
- Softening Temp.: 290° to 315° F
- Tensile Strength: Good, unless noted
- Impact Strength: Excellent, unless noted
- Poor electrical insulator
- Use indoors and outdoors, unless noted
- Machine with carbide tooling; cut *film* with scissors
- Hardness: Rockwell R118-R126

Comparable to Lexan, Hyzod, Tuffak, and Makrolon. At only half the weight of glass, this material maintains excellent clarity and impact strength over a wide temperature range. Often used as windows, instrument gauge covers, machine guards, and signs.

Rectangular Bars—Smooth Finish

Width tolerance is ±1/32″. Length tolerance is +1/2″. Sold in 4-ft. lengths.

Thick.	Thick. Tolerance	1″ Wide	1 1/2″ Wide	2″ Wide	2 1/2″ Wide	3″ Wide	4″ Wide

Tight-Tolerance Blanks—Smooth Finish

- Color: Translucent gray
- Max. Temp.: 250° F; low end not rated
- Impact Strength: Good

These are consistently flat, square, and parallel on all six sides. Meet UL 94HB. Width and length tolerances are ±0.010″.

Thick.	Thick. Tolerance	2″×12″	4″×12″	12″×12″

Film—Finish Based on Type

- Color: *Gloss*, clear; *velvet* and *matte*, translucent
- Temp. Range: Not rated

Easily print and hot stamp this film. *Gloss* sides have a smooth finish. *Velvet* and *matte* sides are textured with a dull appearance; *matte* has a slightly heavier texture. Textured sides diffuse light and mask abrasions and fingerprints. Width and length tolerances are ±1/4″.

Impact-Resistant Clear and Colored Polycarbonate *(Material continued from previous page)*

Rods—Rough Finish

- Color: Diameters up to 2″, translucent clear; all others, translucent gray
- Max. Temp.: 240° F; low end not rated
- Impact Strength: Good
- Use Indoors

Meet UL 94HB for flammability and made of FDA compliant materials. Rods greater than 1″ in diameter are stress relieved. Rods 1″ to 6″ long are extruded on the perimeter and saw cut on the flat side.

Scratch-Resistant Clear and Tinted Polycarbonate

- Color: See below
- Temp. Range: –40° to +200° F
- Softening Temp.: 295° F
- Tensile Strength: Good
- Impact Strength: Excellent
- Poor electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Not rated

Resists abrasion to maintain clarity better than other polycarbonates. Has a clear hard-coat finish on both sides that fights UV degradation and withstands harsh cleaners and solvents.

Clear Sheets—Smooth Finish

- Color: Clear

Width and length tolerances are ±1/4″.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		24″×48″		48″×48″		48″×96″

Static-Dissipative Clear Polycarbonate

- Color: Clear
- Max. Temp.: 180° F; low end not rated
- Softening Temp.: 310° F
- Tensile Strength: Good
- Impact Strength: Excellent
- Poor electrical insulator
- Use Indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R118

Sheets have high impact strength plus a surface that reduces static electricity. Material does not attract dust and other contaminants.

Sheets—Smooth Finish

Width and length tolerances are ±1/4″.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		24″×48″		48″×48″

Bullet-Resistant Clear Polycarbonate

- Color: Clear
- Temp. Range: –40° to +200° F
- Softening Temp.: 295° F
- Tensile Strength: Good
- Impact Strength: Excellent
- Poor electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Not rated

Use this material as security glazing—it helps protect against forced entry. Also good for machine guards, it resists abrasion and UV degradation.

Sheets—Smooth Finish

Width and length tolerances are ±1/8″ for sheets up to 24″×24″, and +5/8″ for sheets 24″×48″ and larger. Thickness tolerance is ±0.065″. The ***0.78″ thick sheets*** have an acrylic inner layer and polycarbonate exterior layers, and meet UL 752 Level 1, MPSA 9 mm rating. The ***1.30″ thick sheets*** are four-ply polycarbonate laminates with UL 752 Level 3, SPSA .44 Magnum rating.

Thick.	12″×12″		12″×24″		24″×24″		24″×48″		48″×48″		48″×96″

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8574KAC**.

High-Strength Glass-Filled Polycarbonate

- Color: Opaque black
- Temp. Range: –40° to +266° F
- Softening Temp.: 329° F
- Tensile Strength: Excellent
- Impact Strength: Good
- Good electrical insulator
- Use indoors
- Machine with carbide tooling
- Hardness: Rockwell M91

Material is 20% glass-filled to provide superior tensile strength for use in structural applications. Meets UL 94HB for flammability.

Sheets—Rough Finish

Width and length tolerances are ±1/8″ for 6″ and 12″ sides, +1/2″ for the 24″ side, and +1″ for the 48″ side.

Machinable and Bendable Clear PETG

- Color: Clear
- Temp. Range: –30° to +150° F
- Softening Temp.: 180° F
- Tensile Strength: Good
- Impact Strength: Good
- Not rated as an electrical insulator, unless noted
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R108-R115

You can form this material into complex shapes without sacrificing durability, but it lacks the clarity and impact resistance of polycarbonate. FDA compliant.

Sheets—Smooth Finish

- Good electrical insulator

Meet UL 94HB for flammability. Width and length tolerances are +1/4″ for sheets up to 24″×48″, and +5/8″ for sheets 48″×48″ and larger.

Optically Clear and Colored Cast Acrylic

- Color: Clear, unless noted
- Temp. Range: *Sheets* and *Cubes*, –20° to +170° F; *Anti-Fog Sheets, Rods* and *Tubes*, 0° to 150° F; *Rectangular Bars* and *Circles*, 176° F, low end not rated
- Softening Temp.: 196° to 239° F, unless noted
- Tensile Strength: Good
- Impact Strength: Poor
- Good electrical insulator, unless noted
- Use indoors and outdoors
- Machine with carbide tooling
- Hardness: Rockwell M90-M103

Offers better optical clarity than molded and extruded acrylic.

Rectangular Bars—Smooth Finish

- Not rated as an electrical insulator

Width and length tolerances are ±1/16″. Sold in 4-ft. lengths.

Optically Clear and Colored Cast Acrylic *(Material continued from previous page)*

- Color: Clear, unless noted
- Temp. Range: *Sheets* and *Cubes*, –20° to +170°F; *Anti-Fog Sheets*, *Rods* and *Tubes*, 0° to 150°F; *Rectangular Bars* and *Circles*, 176°F, low end not rated
- Softening Temp.: 196° to 239°F, unless noted
- Tensile Strength: Good
- Impact Strength: Poor
- Good electrical insulator, unless noted
- Use indoors and outdoors
- Machine with carbide tooling
- Hardness: Rockwell M90-M103

Offers better optical clarity than molded and extruded acrylic.

Mil-Spec Sheets—Smooth Finish

- Softening Temp.: Not rated

Sheets are thermally shrunk and meet MIL-P-5425 and AMS-LP-391. Width and length tolerances are +¼″.

Thick.	Thick. Tolerance	12″×12″	12″×18″	12″×24″	18″×18″	18″×24″

Round Tubes—Smooth Finish

- Softening Temp.: Not rated

Meet UL 94HB for flammability. Tubes up to 8″ OD are FDA compliant. Length tolerance is ±1″. Wall thickness tolerance is ±15%. **To Order:** Please specify 1-, 3-, or 5-ft. lengths, unless otherwise indicated.

OD	OD Toler.	ID	Wall Thick.		Per Ft.

Scratch-Resistant Clear Cast Acrylic

- Color: Clear
- Temp. Range: –26° to +176° F
- Softening Temp.: 200° F
- Tensile Strength: Good
- Impact Strength: Poor
- Good electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Rockwell M100

Coated to be 45 times more abrasion resistant than uncoated acrylic. Meets UL 94HB for flammability.

Sheets—Smooth Polished Finish

Width and length tolerances are ±1/32″.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		24″×48″		48″×96″	
1/8″	+0.02″, –0.03″	8536K131	$16.66	8536K132	$28.96	8536K133	$50.35	8536K32	$87.58	8536K23	$291.89

Static-Dissipative Clear Cast Acrylic

- Color: Clear
- Max. Temp.: 180° F; low end not rated
- Softening Temp.: 239° F
- Tensile Strength: Good
- Impact Strength: Poor
- Good electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Rockwell M94

A static-dissipative surface provides excellent control of electrostatic discharge and does not attract dust and other contaminants. Meets UL 94HB for flammability.

Sheets—Smooth Polished Finish

Width and length tolerances are ±1/32″.

UV-Resistant Clear Extruded Acrylic

- Color: Clear
- Temp. Range: 32° to 160° F, unless noted
- Softening Temp.: 191° to 239° F
- Tensile Strength: Good
- Impact Strength: Poor
- Good electrical insulator, unless noted
- Use indoors and outdoors
- Machine with carbide tooling
- Hardness: Rockwell M89-M96, unless noted

Less optically clear than cast acrylic, but has good clarity over time, even when exposed to weather. Material provides a smooth surface for windows and signs.

Rectangular Bars—Smooth Finish

- Temp. Range: 40° to 150° F
- Not rated as an electrical insulator
- Hardness: Not rated

Length tolerance is +1″. Sold in 6-ft. lengths.

Mirrored Sheets and Circles—Smooth Finish

- Color: Clear with mirror finish
- Sheets, not rated as an electrical insulator

One face is aluminum coated for a mirror finish. *Sheets* have a width and length tolerance of ±1/16″. *Circles* have a thickness tolerance of ±0.012″ for 0.118″ thicknesses and ±0.024″ for 0.236″ thicknesses. *Plain-back sheets* meet UL 94HB for flammability. *Adhesive-backed sheets* and *circles* have a rubber-based adhesive that has a temperature range of 32° to 150° F.

(Material continued on following page)

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8574KAC**.

UV-Resistant Clear Extruded Acrylic *(Material continued from previous page)*

- Color: Clear
- Temp. Range: 32° to 160° F, unless noted
- Softening Temp.: 191° to 239° F
- Tensile Strength: Good
- Impact Strength: Poor
- Good electrical insulator, unless noted
- Use indoors and outdoors
- Machine with carbide tooling
- Hardness: Rockwell M89-M96, unless noted

Less optically clear than cast acrylic, but has good clarity over time, even when exposed to weather. Material provides a smooth surface for windows and signs.

Textured Sheets—One Side Textured; Other Side Has a Smooth Finish

- Not rated as an electrical insulator

Width and length tolerances are ±1/8″. Meet UL 94HB for flammability. *Nonglare-finish sheets* have a matte texture on one side and a smooth finish on the other. *Pebble-finish sheets* are textured on one side with a smooth finish on the other.

Thick.	Thick. Tolerance	NONGLARE FINISH 12″×12″		NONGLARE FINISH 24″×24″		NONGLARE FINISH 48″×96″		PEBBLE FINISH 12″×12″		PEBBLE FINISH 24″×24″		PEBBLE FINISH 48″×96″

Impact-Resistant UV-Resistant Extruded Acrylic

- Color: Clear
- Temp. Range: −22° to +180° F
- Softening Temp.: 210° to 220° F
- Tensile Strength: Good
- Impact Strength: Poor
- Not rated as an electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Rockwell M68

Modified to be 5 to 6 times stronger than standard extruded acrylic (see page 3571 and above). Meets UL 94HB for flammability.

Sheets—Smooth Finish

Width and length tolerances are ±1/8″.

Thick.	Thick. Tolerance	12″×12″		24″×24″		48″×96″

Clear Cellulose (Acetate and Butyrate)

- Color: Clear
- Max. Temp.: *Film*, 227°F; *tubes*,170°F; low end temperatures not rated
- Softening Temp.: *Film*, 257°F; *tubes*, 219°F
- Tensile Strength: Good
- Impact Strength: Good
- Poor electrical insulator
- Use indoors
- Cut *film* with utility knife; machine *tubes* with high-speed steel tooling
- Hardness: Rockwell R78-R120

A general purpose plastic with good clarity. *Film* is often used in printing applications and as overlays. *Tubes* are used as packaging.

Film (Acetate)—Smooth Finish

Also known as triacetate. Width and length tolerances are ±1/32″.

Thick.	Thick. Tolerance	42″×50″	Roll	42″×25′	Roll	42″×50′	Roll

About Performance Plastics

Tensile Strength

The amount of stretching a material can withstand before breaking.

Hardness

Moisture Resistance

Refers to the material's tendency to resist the absorption of water.

Poor	Good	Excellent
Nylon 6/6, Kevlar-Filled Nylon	Polystyrene, Polypropylene, ABS, Nylon 6, Acetal Copolymer, Polyester	PVC I, PVC II, Nylon 6/12, Delrin® Acetal Resin, CPVC

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8747KAC**.

Chemical-Resistant PVC (Type I)

- Color: Opaque dark gray, unless noted
- Temp. Range: 32° to 140°F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Good, except *film* is poor
- Impact Strength: Poor
- Excellent electrical insulator; *film* not rated
- Use indoors and outdoor, except use *clear* indoors
- Machine with carbide tooling; cut *film* with utility knife
- Hardness: Shore D80-D89; *film* not rated

Good chemical resistance (unless noted) makes PVC (polyvinyl chloride) the most widely used vinyl. All except *film* are used in corrosion-resistant tanks, ducts, and fittings and meet UL 94V0 for flammability.

Rectangular Bars—Smooth Finish

Width tolerance is +0.023″ for 1/8″ to 3/4″ thicknesses and ±0.125″ for 1″ thicknesses and larger. Thickness tolerance is ±10%.

Sold in 1-ft. increments, maximum length is 4 feet, unless noted.
To Order: Please specify length.

★ Film has blue tint.

Peel-and-stick zipper attaches to film, making an entrance. Zipper is 7-ft. lg. with an adhesive back for easy installation. Temp. range is 45° to 120° F.

84645A58 ..... **Each** $10.41

Antistatic Film—Smooth Finish

- Color: Clear
- Max. Temp.: 110° F; low end not rated

Embedded with a diamond-shaped carbon print to ground static charges. Chemical resistance is not rated. Width tolerance is ±1/2″. Sold in 1-ft. increments; max. length is 300 feet. **To Order:** Please specify length.

Thick.	Thick. Tolerance	Wd.		Per Ft.
0.012″	±0.0005″	54″	8714K57	$7.14

Adhesive-Backed Film—Smooth Finish

- Color: Opaque white

A popular choice for signs, one side can be marked with a message and the other side has a permanent pressure-sensitive acrylic adhesive. Width and length tolerances are ±1/32″.

Thick.	Thick. Tolerance	Wd.×Lg.		
0.0045″	±0.00045″	27″×20″	8590K21	$1.70

Impact-Resistant PVC (Type II)

- Color: Opaque light gray
- Temp. Range: –40° to +140° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Excellent
- Excellent electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R111

Boasting the same chemical resistance of PVC (Type I), but with increased impact strength for parts subject to harder use. Meets UL 94V0 for flammability.

Rods—Smooth Finish

Sold in 1-ft. increments, maximum length is 5 feet.
To Order: ***Please specify length.***

High-Temperature CPVC

- Color: Opaque gray, unless noted
- Temp. Range: 32° to 200° F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Good
- Excellent electrical insulator
- Use indoors and outdoors, unless noted
- Machine with carbide tooling
- Hardness: Rockwell R116-R119

This chlorinated version of PVC has better heat resistance than PVC (Type I). It is commonly used in chemical processing and metal finishing applications.

Rectangular Bars—Smooth Finish

- Temp. Range: 0° to 180° F

Meet UL 94V0, 5VA, and 5VB for flammability. Width tolerance is ±1/8″. Sold in 1-ft. increments; maximum length is 4 feet. ***To Order:*** Please specify length.

Lightweight Rigid PVC Foam

- Color: Opaque black or white
- Temp. Range: 14° to 131° F
- Softening Temp.: 167° F
- Tensile Strength: Poor
- Impact Strength: Poor
- Poor electrical insulator
- *Black*, use indoors; *white*, use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Shore D79-D85

Ideal for signs, this weather-resistant material readily accepts paint, screen printing, and photo mounting. *White sheets* meet UL 94V0 for flammability.

Sheets—Smooth Finish

Width and length tolerances are +1/4″. **To Order:** Please specify color: black or white.

Easy-to-Form Chemical-Resistant Acrylic/PVC

- Color: Opaque black, gray, or white
- Temp. Range: –40° to +150° F
- Softening Temp.: 250° to 300° F
- Tensile Strength: Good
- Impact Strength: Excellent
- Not rated as an electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R94

Also known as Kydex T, this material is perfect for thermoforming. It provides a high-quality surface finish, sharp edges, and excellent mold reproduction. It's also very resistant to chemicals.

Sheets—One Side Textured; Other Side has a Smooth Finish

Meet UL 94V0 for flammability. Width and length tolerances are ±1/8″. **To Order:** Please specify color: black, gray, or white.

Impact-Resistant Polystyrene

- Color: Translucent to opaque white
- Temp. Range: *Sheets*, 40° to 148° F; *rods*, –10° to +172° F
- Softening Temp.: 210° to 221° F
- Tensile Strength: Poor
- Impact Strength: Good
- *Sheets*, not rated as an electrical insulator; *rods*, excellent
- Use indoors
- Machine with high-speed steel tooling
- Hardness: *Sheets*, not rated; *rods*, Rockwell R100-R110

This easy-to-machine, low cost plastic has a good balance between stiffness and strength. Used in dairy containers, lids, and refrigerator interiors. All except 1/32″ thick sheet meet UL 94HB.

Sheets—Smooth Finish

Width and length tolerances are +3/32″. Sold in 40″×72″ sheets.

Easy-to-Machine Chemical-Resistant Polypropylene

- Color: Translucent white, unless noted
- Temp. Range: 0° to 180° F, unless noted
- Softening Temp.: 300° to 350° F, unless noted
- Tensile Strength: Poor
- Impact Strength: Good, unless noted
- Excellent electrical insulator, unless noted
- Use indoors, unless noted
- Machine with high-speed steel tooling, unless noted
- Hardness: Rockwell R79-R115, unless noted

This material has a hard, smooth surface that resists many chemicals. It is one of the most commonly used plastics due to its low cost. Translucent white is also known as natural polypropylene.

Rectangular Bars—Smooth Finish

- Max. Temp.: 225° F; low end not rated
- Softening Temp.: Not rated

Meet UL 94HB for flammability. FDA compliant. Width tolerance is +1/8″.

Easy-to-Machine Chemical-Resistant Polypropylene *(Material continued from previous page)*

- Color: Translucent white, unless noted
- Temp. Range: 0° to 180° F, unless noted
- Softening Temp.: 300° to 350° F, unless noted
- Tensile Strength: Poor
- Impact Strength: Good, unless noted
- Excellent electrical insulator, unless noted
- Use indoors, unless noted
- Machine with high-speed steel tooling, unless noted
- Hardness: Rockwell R79-R115, unless noted

This material has a hard, smooth surface that resists many chemicals. It is one of the most commonly used plastics due to its low cost. Translucent white is also known as natural polypropylene.

Sheets—Smooth Finish

- Color: Translucent or opaque white
- Not rated as an electrical insulator

These stress-relieved sheets are FDA and USDA compliant and meet UL 94HB for flammability. Width and length tolerances are +1″ for *translucent* and ±1/8″ for *opaque*.

Hollow Balls—Smooth Finish

- Max. Temp: 220° F; low end not rated
- Softening Temp.: Not rated
- Grade: Not rated
- Sphericity: Not rated
- Impact Strength: Poor
- Not rated as an electrical insulator
- Hardness: Not rated
- Use indoors and outdoors

Create a floating blanket on the surface of chemical and processing tanks to slow evaporation, cut heat loss, and reduce pollution by containing fumes. Ball diameter should be larger than the inlet, outlet, and overflow pipe diameters of your tank.

Flame-Retardant Polypropylene

- Color: *Sheets*, opaque white; *film*, opaque black
- Temp. Range: 0° to 190°F
- Softening Temp.: 210° to 299°F
- Tensile Strength: Poor
- Impact Strength: *Sheets*, excellent; *film*, good
- *Sheets*, not rated as an electrical insulator; *film*, excellent
- *Sheets*, use indoors; *film*, use indoors and outdoors
- *Sheets*, machine with high-speed steel tooling; cut *film* with utility knife
- Hardness: *Sheets*, Shore D67; *film*, not rated

Sheets—Smooth Finish

Meet UL 94V0 and UL 94-5VA for flammability, and are in accordance with FMRC (Factory Mutual Research Corporation) 4910 testing standards. Width and length tolerances are ±¼″, except for 48″×96″ sheets, which have tolerances of +½″.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		48″×48″		48″×96″

Film—Smooth Finish

Use for electrical insulation as an alternative to polycarbonate, polyester, PVC, and aramid paper. It is easily die cut, has a printable surface, and can be laminated. Sheets meet UL 94V0 and rolls meet UL 94VTM0 for flammability. Width tolerance is ±⅛″ for all film. Length tolerance is +¼″ for sheets and +10 ft. for rolls.

12″×12″ Sheets						24″ Wd.×100′ Lg. Rolls

Easy-to-Form Impact-Resistant ABS

- Color: Opaque beige or black, unless noted
- Max. Temp.: 140°F; low end not rated
- Softening Temp.: 199° to 220°F, except *film* is not rated
- Tensile Strength: Good
- Impact Strength: Excellent, unless noted
- Good electrical insulator, except *film* and *tubes* are not rated
- Use indoors
- Machine with high-speed steel tooling; cut *film* with scissors
- Hardness: Rockwell R100-R109

Tough, rigid, impact-resistant ABS (acrylonitrile-butadiene-styrene) is easily machined and formed. Use for protective applications and housings. All except *film* meet UL 94HB for flammability.

Rectangular Bars—Smooth Finish

- Color: Opaque beige
- Impact Strength: Good

Width and length tolerances are +1/16″. Sold in 2-ft. lengths.

Static-Dissipative ABS/PVC

- Color: Opaque black
- Temp. Range: Not rated
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Good
- Not rated as an electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R87

Great for use in applications where dust and static electricity are problems. Material combines the best features of PVC and ABS for corrosion resistance with high impact strength. It's electrically conductive and meets ASTM D4673 and UL 94V1 for flammability.

Sheets—One Side Textured; Other Side Has a Smooth Finish

Width and length tolerances are ±1/8″ for sizes 12″×12″ to 24″×48″; ±1/2″ for sizes 54″×48″ and 54″×96″.

Wear-Resistant Slippery Extruded Nylon 6/6

- Color: Opaque off-white, unless noted
- Temp. Range: –22° to +210° F, unless noted; *balls* not rated
- Softening Temp.: Not rated
- Tensile Strength: Excellent; *balls* not rated
- Impact Strength: Good, unless noted; *balls* not rated
- Low friction; *balls* not rated
- Poor electrical insulator
- Use indoors
- Machine with high-speed steel tooling, unless noted; *balls* not rated
- Hardness: Rockwell R108-R121

The most widely used nylon, this material retains its shape better than nylon 6 and is a better choice for contact with gasoline, mineral oil, and refrigerants. It has good strength, wear resistance, and lubrication properties. All except *balls* meet ASTM D4066. All except *black nylon* and *balls* are FDA compliant.

Rectangular Bars—Smooth Finish

- Max. Temp.: 210° F; low end not rated

Meet UL 94V2 for flammability and are NSF certified. Meet ASTM D5989 and 3-A sanitary standard requirements. Width tolerance is +0.250″, –0.005″. Sold in 1-ft. increments; maximum length is 4 feet. **To Order:** Please specify length.

Sheets—Smooth Finish

- Color: Opaque off-white or black

Off-white sheets meet 3-A sanitary standard requirements, are NSF certified, and meet UL 94V2 for flammability, except 1/16″ and 3/32″ thicknesses, which meet UL 94HB. *Black sheets* meet UL 94HB for flammability. All sheets meet ASTM D5989. Width and length tolerances are ±1/8″ for 6″ and 12″ sides, +1/2″ for 24″ sides, and +1″ for 48″ sides.

Tubes—Smooth Finish

- Temp. Range: –40° to +167° F

Meet UL 94HB for flammability. *Tight-tolerance tubes* have an OD and ID tolerance of ±0.005″ for tubes 1/4″ OD to 1/2″ OD, ±0.010″ for tubes 5/8″ OD to 1″ OD, and ±0.015″ for tubes 1 1/4″ OD and 1 1/2″ OD. *Oversized tubes* have an oversized OD and an undersized ID for finishing to sizes listed. Length tolerance is +1″. Sold in 5-ft. lengths.

(Material continued on following page)

For information about plastics, see page 3564. For performance plastics, see page 3573.

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8539KAC**.

Wear-Resistant Slippery Extruded Nylon 6/6 *(Material continued from previous page)*

- Color: Opaque off-white, unless noted
- Temp. Range: −22° to +210° F, unless noted; *balls* not rated
- Softening Temp.: Not rated
- Tensile Strength: Excellent; *balls* not rated
- Impact Strength: Good, unless noted; *balls* not rated
- Low friction; *balls* not rated
- Poor electrical insulator
- Use indoors
- Machine with high-speed steel tooling, unless noted; *balls* not rated
- Hardness: Rockwell R108-R121

The most widely used nylon, this material retains its shape better than nylon 6 and is a better choice for contact with gasoline, mineral oil, and refrigerants. It has good strength, wear resistance, and lubrication properties. All except *balls* meet ASTM D4066. All except *black nylon* and *balls* are FDA compliant.

Hex Bars—Smooth Finish

- Max. Temp.: 210° F; low end not rated

Meet ASTM D5989, 3-A sanitary standard requirements, and UL 94V2 for flammability. NSF certified. Hex size is measured across the flats. Hex tolerance is −0.005″.

Hex Size		Per Ft.
Sold in 4-ft. lengths.		
3/8″	8731K13	$3.22
7/16″	8731K14	4.54
1/2″	8731K15	5.51

Hex Size		Per Ft.
Sold in 1-ft. increments; maximum length is 4 ft. To Order: Please specify length.		
5/8″	8731K16	$8.95
3/4″	8731K17	10.76

Hex Size		Per Ft.
Sold in 1-ft. increments; maximum length is 4 ft. To Order: Please specify length.		
7/8″	8731K18	$16.02
1″	8731K19	17.62

Rods—Smooth Finish

- Color: Opaque off-white or black

Meet ASTM D5989. Meet UL 94V2 for flammability, except 1/16″ diameter meets UL 94HB. Off-white rods are also NSF certified and meet 3-A sanitary standard requirements. Dia. tolerance is +0.005″ for diameters 2″ and smaller, +0.030″ for diameters 2 1/8″ to 2 3/4″, and +0.250″ for diameters 3″ and larger.

Dia.	Off-White	Per Ft.	Black	Per Ft.

Ultra-Wear-Resistant MDS-Filled Nylon 6/6

- Color: Opaque black/charcoal
- Temp. Range: −20° to +210° F
- Softening Temp.: Not rated
- Tensile Strength: Excellent
- Impact Strength: Good; *strips* poor
- Low friction
- Poor electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R115-R120

Comparable to Nylatron, this material has molybdenum disulfide (MDS) to make it more wear and friction resistant than regular nylon 6/6. Meets ASTM D4066. Also meets UL 94HB for flammability, except 0.125″ strips meet UL 94V2.

Sheets—Smooth Finish

Meet ASTM D5989. Width and length tolerances are ±1/8″ for 12″ sides, +1/2″ for 24″ sides, and +1″ for 48″ sides.

Slippery Chemical-Resistant Extruded Nylon 6/12

- Color: Opaque off-white
- Temp. Range: –40° to +200° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Poor
- Low friction
- Not rated as an electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R114

This slippery material holds its shape better than nylon 6/6 and has improved chemical resistance. Meets ASTM D4066 and D5989.

Sheets—Smooth Finish

Ultra-Strength Kevlar-Filled Nylon

- Color: Opaque mustard, unless noted
- Temp. Range: –40° to +300° F
- Softening Temp.: Not rated
- Tensile Strength: Excellent
- Impact Strength: Good
- Low friction
- Poor electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R121

Also known as Hydlar Z, this material is stronger than unfilled nylon and can last up to 20 times longer.

Sheets—Smooth Finish

Width and length tolerances are ±1/8″ for 6″ and 12″ sides, +1/2″ for 24″ sides, and +1″ for 48″ sides.

Wear-Resistant Slippery Cast Nylon 6

- Color: Opaque white to off-white
- Temp. Range: 32° to 200° F
- Softening Temp.: Not rated
- Tensile Strength: Excellent
- Impact Strength: Poor
- Low friction
- Excellent electrical insulator, unless noted
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R115-R125

Has improved wear resistance and machinability over extruded nylon with less impact strength. Casting ensures uniformity, even across the thickest pieces. Meets ASTM D5989. Also meets UL 94HB for flammability, is FDA compliant, and meets 3-A sanitary standard requirements.

Rectangular Bars—Smooth Finish

- 3″ thick., good electrical insulator

Width tolerance is +1/8″. Sold in 1-ft. increments; maximum length is 4 feet. **To Order:** Please specify length.

Ultra-Slippery Oil-Filled Cast Nylon 6

- Color: Opaque green
- Temp. Range: 32° to 230° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Good
- Low friction
- Excellent electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R100-R115

Oil is present throughout the material, making the surface self-lubricating. Offers enhanced wear resistance and dimensional stability. Meets ASTM D5989.

Rectangular Bars—Smooth Finish

Width tolerance is +1/8″. Sold in 1-ft. increments; maximum length is 4 feet. **To Order:** Please specify length.

Ultra-Wear-Resistant MDS-Filled Cast Nylon 6

- Color: Opaque black
- Max. Temp.: 230°F; low end not rated
- Softening Temp.: Not rated
- Tensile Strength: Excellent
- Impact Strength: Poor
- Low friction
- Excellent electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R115-R125

Compared to unfilled white cast nylon 6, this material has improved resistance to UV degradation. Material also contains MDS (molybdenum disulfide) for increased wear resistance. Excellent for use in wear strip and bearing applications. Meets ASTM D5989.

Rectangular Bars—Smooth Finish

Width tolerance is +1/8″. Sold in 1-ft. increments; maximum length is 4 feet. **To Order:** Please specify length.

Wear- and Water-Resistant Delrin® Acetal Resin

- Color: Opaque white or black
- Temp. Range: –20° to +180° F, unless noted
- Softening Temp.: 250° F
- Tensile Strength: Good
- Impact Strength: Good
- Low friction
- Good electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling; cut *adhesive-backed strips* with scissors
- Hardness: Rockwell M89

Also known as acetal homopolymer and polyoxymethylene (POM), Delrin® acetal resin combines strength and wear resistance with good chemical resistance. It also absorbs less moisture than nylon. *White Delrin® acetal resin* is NSF, FDA, and USDA compliant, except *tubes* are not USDA compliant. All meet ASTM D6100, except *black strips*, *white* and *black tubes*, and *balls*.

Rectangular Bars—Smooth Finish

Width tolerance is +0.125″. Thickness tolerance is +0.025″ for 1/8″ to 1 3/4″ thicknesses, +0.050″ for 2″ to 3″ thicknesses, and +0.125″ for 4″ thickness. Sold in 1-ft. increments; maximum length is 4 feet. **To Order:** Please specify length.

Wear- and Water-Resistant Delrin® Acetal Resin *(Material continued from previous page)*

- Color: Opaque white or black
- Temp. Range: –20° to +180° F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Good
- Low friction
- Good electrical insulator, unless noted
- Use indoors
- Machine with high-speed steel tooling; cut *adhesive-backed strips* with scissors
- Hardness: Rockwell M89-M94

Also known as acetal homopolymer and polyoxymethylene (POM), Delrin® acetal resin combines strength and wear resistance with good chemical resistance. It also absorbs less moisture than nylon. *White Delrin® acetal resin* is NSF, FDA, and USDA compliant, except *tubes* are not USDA compliant. All meet ASTM D6100, except *black strips*, *white* and *black tubes*, and *balls*.

Rods—Smooth Finish

- Black is not rated as an electrical insulator

Dia. tolerance is +0.005″ for diameters 1⅞″ and smaller, +0.030″ for diameters 2″ to 2¾″, and +0.250″ for diameters 3″ and larger.

Ultra-Slippery Lubricated Acetal (Turcite)

- Color: Opaque blue or red
- Temp. Range: –40° to +180° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Poor
- Low friction
- Not rated as an electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: *Blue*, Rockwell M81; *red*, Rockwell M63

This acetal-based, self-lubricating material is chemical resistant, easy-to-machine, and very slippery. Ideal for bearing applications. Meets UL 94HB for flammability.

Rods—Smooth Finish

Diameter tolerance for 1/4″ to 2″ diameters is +0.005″; 2 1/2″ diameters and greater are oversized for finishing to sizes listed. *Blue* is more wear resistant than red, making it suitable for moderate to heavy loads at moderate speeds. *Red* is more slippery than blue, making it suitable for low-load applications at high speeds.

Dia.	Blue Per Ft.	Red Per Ft.

High-Strength Glass-Filled Delrin® Acetal Resin

- Color: Opaque white to off-white
- Temp. Range: –40° to +185° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Poor
- Low friction
- Good electrical insulator
- Use indoors
- Machine with carbide tooling
- Hardness: Rockwell M90

Material is 20% glass-filled for improved heat resistance and greater dimensional stability. It has low moisture absorption. Made from Delrin® acetal resin 570. Meets ASTM D4181 and D6100. Meets UL 94HB for flammability.

Sheets—Smooth Finish

Width and length tolerances are ±1/8″ for 12″ sides, +1/2″ for 24″ sides, and +1″ for 48″ sides. Thickness has a plus tolerance.

Ultra-Wear-Resistant PTFE-Filled Delrin® Acetal Resin

- Color: Opaque brown, unless noted
- Temp. Range: –40° to +185° F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Poor
- Low friction
- Not rated as an electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R118-R121

Material is filled with 13% PTFE to provide better wear and friction resistance than unfilled Delrin® acetal resin. It has low moisture absorption and good dimensional stability. *Sheets* and *rods* meet ASTM D6100. All except *strips* meet UL 94HB for flammability.

Strips—Smooth Finish

- Max. Temp.: 185° F; low end not rated

Width tolerance is ±0.020″. Available in 5-, 10-, 25-, 50-, and 100-ft. lengths. **To Order:** Please specify length.

Acetal Copolymer

For information about plastics, see page 3564. For performance plastics, see page 3573.

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8539KAC**.

Chemical- and Wear-Resistant Acetal Copolymer

- Color: Opaque white or black, unless noted
- Temp. Range: –40° to +180° F; *tubes*, –4° to +180° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Good
- Low friction; *tubes* not rated
- Good electrical insulator
- Use indoors
- Machine with high-speed steel tooling; cut *film* with scissors
- Hardness: Rockwell M78-M88

Acetal copolymer is wear resistant and offers good chemical resistance. *Sheets* and *rods* meet ASTM D6100. *Translucent* and *opaque white acetal copolymer* is FDA compliant and NSF certified.

Sheets—Smooth Finish

Width and length tolerances are +1″. **To Order:** Please specify color where available: white or black.

Static-Dissipative Acetal Copolymer

- Color: Opaque off-white
- Temp. Range: –20° to +180° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Good
- Low friction
- Not rated as an electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: *Sheets*, Rockwell M51; *rods*, not rated

This chemical- and wear-resistant material is used in applications where dust and static electricity are a problem. Meets ASTM D6100 and UL 94HB for flammability.

Sheets—Rough Finish

Width and length tolerances are +1/16″.

Thick.	Thick. Tolerance	6″×6″		12″×12″		12″×24″		24″×48″

Moisture-Resistant Polyester (PET)

- Color: Opaque white to off-white, unless noted
- Temp. Range: –40° to +230° F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Excellent
- Impact Strength: Poor
- Low friction; *film* not rated
- Good electrical insulator, unless noted
- Use indoors and outdoors, except use *film* indoors
- Machine with high-speed steel tooling; cut *film* with scissors
- Hardness: Rockwell R114; *film* not rated

PET has good dimensional stability and low moisture absorption. Comparable to acetal (pages 3586-3589). *Sheets* and *rods* meet ASTM D5927 and D6261 and are FDA compliant.

Sheets—Smooth Finish

Width tolerance is ±1/8″ for 6″ and 12″ widths, +1/2″ for 24″ widths. Length tolerance is ±1/8″ for 6″ and 12″ lengths, +1″ for 24″ and 48″ lengths.

High-Temperature Film—Smooth Finish

- Color: Translucent
- Max. Temp.: 400° F; low end not rated
- Not rated as an electrical insulator

This film releases cleanly from adhesives, synthetic resins, and paint. Commonly used in flat surface molds and carrier plates. *Note:* Film should be at least 1″ larger in width and length than the piece it is releasing from. Width tolerance is ±1/8″. Length tolerance is +1/8″.

Thick.	Wd.	50-ft. Length	
0.0010″	20″	7594T11	$72.38
0.0015″	20″	7594T21	84.42

Adhesive-Backed Film—Smooth Finish

- Color: Clear
- Temp. Range: –50° to +275° F

Has a permanent, pressure-sensitive acrylic adhesive on one side that increases thickness by up to 0.001″. Width and length tolerances are ±1/32″. Film only (not adhesive) meets UL 94VTM2 for flammability.

Thick.	Thick. Tolerance	27″ × 20″		27″ × 38″	
0.002″	±0.0002″	8689K42	$3.23	8689K44	$6.03

Static-Dissipative Adhesive-Backed Film—Smooth Finish

- Color: Clear
- Temp. Range: 40° to 150° F
- Not rated as an electrical insulator

Width and length tolerances are ±1/4″. Thickness tolerance is ±0.0004″.

Thick.	24″ × 48″		48″ × 48″		48″ × 96″	
0.004″	8187K12	$117.02	8187K13	$199.74	8187K14	$353.14

Metallized Film—Smooth Finish

- Color: Silver
- Temp. Range: –40° to +300° F

A thin coating of aluminum on one side creates a shiny finish. Film only (not aluminum coating) meets UL 94VTM2 for flammability.

Thick.	Thick. Tolerance	27″ × 12′	
0.002″	±0.0001″	7538T11	$9.94
0.005″	±0.00025″	7538T12	18.05

Wear-Resistant Lubricated Polyester (Hydex)

- Color: Opaque white to off-white
- Temp. Range: –40° to +221° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Poor
- Low friction
- Not rated as an electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Not rated

This easy-to-machine, polyester-based material is tougher and more wear resistant than PET. Meets ASTM D6261 and 3-A sanitary requirements. FDA compliant.

Rods—Smooth Finish

Sold in 1-ft. increments; maximum length is 5 feet. **To Order:** Please specify length.

For information on the mechanical and physical properties of polyethylene, go to mcmaster.com and search for **8657KAC**.

Moisture-Resistant Polyethylene (LDPE)

- Color: Translucent natural, unless noted
- Temperature Range: –40° to +125° F, unless noted
- Softening Temp.: 192° F, unless noted
- Tensile Strength: Poor, unless noted
- Impact Strength: Excellent, unless noted
- Not rated for friction, unless noted
- Not rated as an electrical insulator, unless noted
- Use indoors, unless noted
- Machine with high-speed steel tooling, unless noted
- Hardness: Shore D42-D66, unless noted

LDPE has good to excellent moisture resistance, which makes it ideal for high humidity and direct water contact applications. Often used in shrink-wrap film, garment bags, and tote boxes, except aluminum-faced sheets.

Rectangular Bars—Smooth Finish

FDA compliant for food contact. Width tolerance is ±1/16″.

Aluminum-Faced Sheets—Smooth Finish

- Color: Opaque black
- Temp. Range: –20° to +180° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Not rated
- Use indoors and outdoors
- Hardness: Not rated

These LDPE sheets have two aluminum faces, one on each side. One face has a black painted finish and the other face is unpainted silver gray.

Meet UL 94V0 for flammability and ASTM E84 5/15 for flame and smoke. Width and length tolerances are ±1/16″. Thickness tolerance is ±0.008″.

Thick.	Size

Reinforced Film—Smooth Finish

- Color: Translucent white or opaque black
- Temperature Range: –75° to +160° F
- Softening Temp.: Not rated
- Impact Strength: Not rated
- Low friction
- Use indoors, unless noted
- Cut with scissors
- Hardness: Not rated

Has a cross-patterned polyester tie cord between layers for strength and tear resistance. Often used as window coverings, construction film, and vapor barriers. Width tolerance is ±4″ for 6-ft. rolls, ±7″ for 10-ft. rolls, and ±14″ for 20-ft. rolls. Length tolerance is ±1 ft.

Width	Thick.	Thick. Tolerance	25-FT. ROLLS White	25-FT. ROLLS Black	25-FT. ROLLS Roll	100-FT. ROLLS White	100-FT. ROLLS Black	100-FT. ROLLS Roll

★ Use indoors and outdoors.

Peel-and-stick zipper attaches to plastic film, allowing you to create an entrance. Zipper is 7-ft. long and has an adhesive back for easy installation. Temperature range is 45° to 120° F.

84645A58 ..... **Each** $10.41

Rigid Polyethylene (HDPE)

- Color: Opaque white, unless noted
- Temp. Range: –40° to +149° F, unless noted
- Softening Temp.: 250° to 281° F, unless noted
- Tensile Strength: Poor, unless noted
- Impact Strength: Good, unless noted
- Low friction, unless noted
- Good electrical insulator, unless noted
- Use indoors, unless noted
- Machine with high-speed steel tooling, unless noted
- Hardness: Shore D62-D69, unless noted

HDPE shares the moisture resistance of LDPE yet offers more rigidity and better heat resistance. Often used for pipe, shipping pallets, and truck bed liners. All except film and balls meet UL 94HB for flammability and are FDA compliant for food contact.

Rectangular Bars—Smooth Finish

- Not rated as an electrical insulator

Width tolerance is +1/16″.

Grip-All Sheets—Textured Finish

- Temp. Range: –31° to +149° F
- Use indoors and outdoors
- Machine with carbide tooling

Meet ASTM D4976. One side has a raised diamond antislip pattern, and the other side has a textured matte finish. Width and length tolerances are +1/16″, except for 48″×96″ sheets, which are ±1/2″. Thickness tolerance is ±5%.

Rigid Polyethylene (HDPE) *(Material continued from previous page)*

Film—Smooth Finish

Reinforced Film

- Color: Reinforced, translucent white or opaque black Flame Retardant, opaque white
- Temp. Range: –20° to +160° F
- Softening Temp.: 180° F
- Tensile and Impact Strength: Not rated
- Not rated for friction
- Not rated as an electrical insulator
- Opaque black, use indoors and outdoors
- Cut with scissors
- Hardness: Not rated

Reinforced film has woven fibers running through it for tear and puncture resistance. Great for applications such as tarps, machinery covers, and water-resistant covers. Length tolerance is ±1 ft.

Flame-retardant film meets Canvas Products Association International Specification 84, Sections 6 & 7; ASTM E84; and Cal. No. 294-40. Use as dividing curtains, machine tarps, and dust covers. Length tolerance is ±1 ft.

High-Strength Film—Smooth Finish

Film with Peel-and-Stick Zipper

- Color: Opaque black
- Temp. Range: –120° to +165° F
- Impact Strength: Not rated
- Not rated for friction
- Not rated as an electrical insulator
- Use indoors and outdoors
- Cut with scissors
- Hardness: Rockwell R40 to R80

Film is extra thick for superior strength. Sold in 1-ft. increments; maximum length is 100 feet. **To Order:** Please specify length.

Thick.	Thick. Tol.	Width	Width Tol.		Per Ft.
0.015″	±0.005″	47″	+1/4″	86255K61	$3.09
0.03″	±0.005″	47″	+1/4″	86255K71	5.38

Peel-and-Stick Zipper attaches to plastic film, allowing you to create an entrance. Zipper has an adhesive back for easy installation. Length is 7 ft. Temperature range is 45° to 120° F.

84645A58 ..... **Each** $10.41

UV-Resistant VHMW Polyethylene

- Color: Opaque white
- Temp. Range: –80° to +150° F
- Softening Temp.: 255° F
- Tensile Strength: Poor
- Impact Strength: Excellent
- Low friction
- Not rated as an electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Shore D65-D68

In addition to offering the impact resistance of UHMW, VHMW polyethylene won't discolor outdoors and resists UV degradation.

Sheets—Smooth Finish

FDA compliant for food contact. Width and length tolerances are +1/2″, –1/4″.

Thick.	Thick. Tolerance	12″×12″		24″×48″		48″×48″		48″×96″	
1/4″	±0.013″	8769K51	$7.47	8769K52	$46.94	8769K54	$86.95	8769K53	$177.81

Impact-Resistant Slippery UHMW Polyethylene

- Color: Opaque white, unless noted
- Temp. Range: –40° to +180° F, unless noted
- Softening Temp.: 262° to 275° F, unless noted
- Tensile Strength: Poor, unless noted
- Impact Strength: Excellent, unless noted
- Low friction, unless noted
- Excellent electrical insulator, unless noted
- Use indoors, unless noted
- Machine with high-speed steel tooling
- Hardness: Shore D62-D68, unless noted

In addition to having a slippery surface, UHMW has excellent impact and wear resistance. Good for lining conveyor belts, guide rails, and work tables and for making bearings and bushings. FDA compliant for food contact.

Rectangular Bars—Smooth Finish

- Temp. Range: –40° to +200° F
- Softening Temp.: 165° F
- Good electrical insulator

Meet ASTM D4020, MIL-P-21922, 3-A sanitary standard requirements, and are USDA compliant. Width tolerance is ±3/32″.

(Material continued on following page)

For information on the mechanical and physical properties of polyethylene, go to mcmaster.com and search for **8657KAC**.

Impact-Resistant Slippery UHMW Polyethylene *(Material continued from previous page)*

- Color: Opaque white, unless noted
- Temp. Range: –40° to +180° F, unless noted
- Softening Temp.: 262° to 289° F, unless noted
- Tensile Strength: Poor, unless noted
- Impact Strength: Excellent, unless noted
- Low friction, unless noted
- Excellent electrical insulator, unless noted
- Use indoors, unless noted
- Machine with high-speed steel tooling, unless noted
- Hardness: Shore D62-D68, unless noted

UHMW has a slippery surface and excellent impact and wear resistance. Good for lining conveyor belts, guide rails, and work tables and for making bearings and bushings. FDA compliant for food contact, unless noted.

Strips—Smooth Finish

Plain Back

Adhesive Backed

- Color: Translucent cream
- Softening Temp.: 176° F
- Poor electrical insulator

Meet ASTM D4020 and MIL-P-23536. Adhesive-backed strips have a rubber-based adhesive with a temperature range of 20° to 120° F. Width tolerance is ±1/32″. Sold in 1-ft. increments; max. length is 50 feet. **To Order:** Please specify length.

Film—Smooth Finish

Plain Back

Adhesive Backed

- Color: Opaque cream
- Temp. Range: –40° to +225° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Plain Back, not rated
- Not rated for friction
- Not rated as an electrical insulator
- Cut with scissors
- Hardness: Plain Back, not rated

Plain-back film has a width tolerance of ±1/32″. Sold in 1-, 2-, 3-, 6-, 10-, or 20-ft. lengths.

Adhesive-backed film has an acrylic adhesive with a temperature range of –40° to +180° F. Width tolerance is ±1/8″. Length tolerance is ±1/16″.

Sheets—Smooth Finish

- Softening Temp.: 275° F
- Tensile Strength: Good
- Hardness: Shore D66

All are USDA compliant and meet ASTM D4020, D6712, D4976, and 3-A sanitary standard requirements. Sheets have width and length tolerances of +1/8″.

Rods—Smooth Finish

- Temp. Range: –40° to +180° F
- Softening Temp. for 3″, 6″, and 9″ long rods: 262° F; all others, 176° F

Meet ASTM D4020 and 3-A sanitary standard requirements. USDA compliant. Rods sold per foot have a plus size diameter tolerance. Length tolerance is +3/8″ for 3″, 6″, and 9″ long rods.

Dia.		Per Ft.

U-Channels—Smooth Finish

- Tensile Strength: Good

Meet ASTM D4020, D6712, and D4976 and 3-A sanitary standard requirements. USDA compliant. Base and leg length tolerances are ±0.080″; wall thickness tolerance is not rated. Inside and outside corners are square. Sold in 2-, 5-, and 8-ft. lengths. **To Order:** Please specify length.

Outside Base × Legs	Wall Thick.		Per Ft.
1″ × 3/4″	1/4″	9928K53	$2.64

4 1/4″ × 1 1/4″	3/8″	8672K33	6.81

90° Angles—Smooth Finish

Meet ASTM D4020, D6712, and D4976 and 3-A sanitary standard requirements. USDA compliant. Leg length and wall thickness tolerances are ±0.060″. Angles can vary from 80° to 100° due to flexibility and temperature changes. Inside and outside corners are rounded and leg edges are straight, unless noted. Sold in 2-, 5-, and 8-ft. lengths. **To Order:** Please specify length.

Outside Leg Lgs.	Wall Thick.		Per Ft.
1 1/2″ × 5/8″	1/4″	9852K61▲	$5.39
1 1/2″ × 1 1/2″	1/4″	8672K36	2.92

3 1/2″ × 3 1/2″	1/2″	9852K62▲	12.43

▲ Inside and outside corners are square.

UHMW Polyethylene

For information about plastics, see page 3564.

For information on the mechanical and physical properties of polyethylene, go to mcmaster.com and search for **8657KAC**.

Ultra-Abrasion-Resistant UHMW Polyethylene

- Color: Opaque blue
- Temp. Range: –40° to +180° F
- Softening Temp.: 275° F
- Tensile Strength: Good
- Impact Strength: Excellent
- Low friction
- Excellent electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Shore D69

Also known as Tivar 88, this modified UHMW has a slick surface that helps material flow. It is ideal for applications requiring high abrasion resistance.

Rectangular Bars—Smooth Finish

Meet ASTM D4020, D6712, and D4976. Width and length tolerances are ±1/8″. Bars are sold in 5-ft. lengths.

Oil-Filled UHMW Polyethylene

- Color: Opaque gray
- Temp. Range: –450° to +180° F
- Softening Temp.: Not rated, unless noted
- Tensile Strength: Good
- Impact Strength: Excellent
- Low friction
- Excellent electrical insulator, unless noted
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Shore D60-D68

Material is self-lubricating so it's more slippery, which improves performance in applications such as chain guides and rollers. It offers great impact resistance and good wear resistance. FDA compliant and USDA approved.

Sheets—Smooth Finish

Width and length tolerances are +1/2″.

Conductive UHMW Polyethylene

- Color: Opaque black
- Temp. Range: –260° to +160° F
- Softening Temp.: 178° F
- Tensile Strength: Poor
- Impact Strength: Excellent
- Low friction
- Not rated as an electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Shore D63

Impact and wear-resistant, this plastic conducts electricity, is carbon powder-filled and self-lubricating, and has excellent abrasion resistance and high impact strength. Meets UL 94HB for flammability.

Sheets—Smooth Finish

Static-Dissipative UHMW Polyethylene

- Color: Opaque black
- Temp. Range: –40° to +185° F, unless noted
- Softening Temp.: 275° F, unless noted
- Tensile Strength: Good, unless noted
- Impact Strength: Excellent, unless noted
- Low friction
- Not rated as an electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling, unless noted
- Hardness: Shore D65-D69

Material has good wear and impact resistance plus a surface that reduces static electricity. Use in applications where dust and static electricity are a concern.

Rectangular Bars—Smooth Finish

Meet ASTM D4020, D6712, and D4976. Width and length tolerances are ±1/8″. Sold in 5-ft. lengths.

Film—Smooth Finish

- Temp. Range: –20° to +180° F
- Softening Temp.: 176° F
- Impact Strength: Not rated
- Excellent electrical insulator

Film has good chemical resistance. The static-dissipative area is 24″ wide. Overall width is 25″ with a width tolerance of ±1″. Sold in 1-, 2-, 3-, 6-, 10-, and 15-ft. lengths. **To Order:** Please specify length.

Thick.	Thick. Tolerance		Per Ft.
0.005″	±0.0005″	8327K11	$4.56
0.010″	±0.001″	8327K12	7.08
0.020″	±0.002″	8327K13	13.81

Rods—Smooth Finish

- Softening Temp.: 200° F
- Tensile Strength: Poor
- Impact Strength: Good
- Good electrical insulator
- Machine with carbide tooling

Meet ASTM D4020.

High-Temperature UHMW Polyethylene

- Color: Opaque white
- Temp. Range: –40° to +275° F
- Softening Temp.: 275° F
- Tensile Strength: Good
- Impact Strength: Excellent
- Low friction
- Excellent electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Shore D68

Also known as Tivar H.O.T., this material has excellent impact and wear resistance and lasts up to 10 times longer in high-temperature applications than standard UHMW.

Sheets—Smooth Finish

FDA and USDA compliant. Meet ASTM D4020, D6712, and D4976. Width and length tolerances are ±1/16″.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		24″×48″		48″×48″

Antimicrobial UHMW Polyethylene

- Color: Translucent off-white
- Temp. Range: Max. Temp. is 176° F; Not rated for min. temp.
- Softening Temp.: 176° F
- Tensile Strength: Poor
- Impact Strength: Excellent
- Low friction
- Not rated as an electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Shore D62

A silver compound is blended into this material to suppress the growth of bacteria, algae, fungus, mold, and mildew.

Sheets—Smooth Finish

FDA compliant. Width and length tolerances are –1/4″.

About High-Performance Plastics

Known for performing at higher temperatures than traditional thermoplastics, these plastics have good chemical resistance and a low coefficient of friction that makes them very slippery.

Temperature

Tensile Strength

Refers to the amount of stretching a material can withstand before breaking.

Electrical Insulating

Materials are rated according to their relative dielectric strength, which is the maximum voltage the material can withstand without failing.

Not Rated	Poor	Good	Excellent
Torlon	Rulon, PVDF, Radel	Teflon® PTFE, PTFE, Polysulfone, PEEK	CTFE, FEP, PFA, Noryl, Ultem, PPS, Kapton® Polyimide, Cirlex, Vespel® Polyimide

PTFE

For information about plastics, see page 3564.

Bars, Sheets, and Rods Made with Teflon® PTFE

- Color: Varies from translucent white to opaque white, unless noted
- Temp. Range: –350° to +500° F
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Good
- Very low friction
- Good electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling, unless noted
- Hardness: Rockwell R58, unless noted

Made with virgin Teflon® PTFE resins, this material surpasses most plastics when it comes to electrical insulation properties, low friction, chemical resistance, and performance in extreme temperatures. FDA compliant for food contact. Meets UL 94V0 for flammability, 3-A sanitary standard requirements, and AMS 3651.

***Sample Sheet Made with Teflon® PTFE*—**Size is 6″×6″×¼″.

8545K1 ..... $37.95

Rectangular Bars—Smooth Finish

Width tolerance is +1/16″. Sold in 1-ft. increments; maximum length is 4 feet, unless noted. Also meet ASTM D3294 except widths less than ½″, which meet ASTM D3308. **To Order:** Please specify length.

Adhesive-Ready Rectangular Bars—One Face Etched for Adhesive, Other Face and Sides Smooth Finish

Etched Side Facing Up

- Color: Opaque white; opaque dark brown (etched face)

Etched on one face so bars can be bonded with epoxy cements and other high-strength adhesives. Width tolerance is +1/16″. Sold in 1-ft. increments; maximum length is 4 feet. Bars that are ¼″ thick or less also meet ASTM D3308; ⅜″ and ½″ thick bars meet ASTM D3294. **To Order:** Please specify length.

Bars, Sheets, and Rods Made with Teflon® PTFE *(Material continued from previous page)*

Sheets—Smooth Finish

Width tolerance is +1/16″ and length tolerance is +1/2″ for sheets 4″×6″ and smaller. Width and length tolerances are ±1/4″ for sheets 6″×6″ and larger. Sheets through 1/4″ thick are skived and may curl. Skived sheets also meet ASTM D3308. Sheets greater than 1/4″ thick are molded for better flatness. Molded sheets also meet ASTM D3294.

Film—Smooth Finish

- Cut with utility knife

Also known as skived sheet. Width tolerance is ±1/16″. Sold in 1-, 2-, 3-, 6-, 10-, and 20-ft. lengths. Also meet ASTM D3308. **To Order:** Please specify length.

Adhesive-Ready Sheets and Film—One Side Etched for Adhesive; Other Side Smooth Finish

Etched Side Facing Up

- Color: Opaque white; opaque dark brown (etched side)

Etched on one side so they can be bonded with epoxy cements and other high-strength adhesives. Width and length tolerances are ±1/4″. Also meet ASTM D3308.

(Material continued on following page)

For information about plastics, see page 3564. For high-performance plastics, see page 3600.

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8545KAC**.

Bars, Sheets, and Rods Made with Teflon® PTFE *(Material continued from previous page)*

- Color: Varies from translucent white to opaque white, unless noted
- Temp. Range: –350° to +500° F
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Good
- Very low friction
- Good electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling, unless noted
- Hardness: Rockwell R58, unless noted

Made with virgin Teflon® PTFE resins, this material surpasses most plastics when it comes to electrical insulation properties, low friction, chemical resistance, and performance in extreme temperatures. FDA compliant for food contact. Meets UL 94V0 for flammability, 3-A sanitary standard requirements, and AMS 3651, unless noted.

***Sample Sheet Made with Teflon® PTFE*—**Size is 6″×6″×¼″.

8545K1 ..... $37.95

Tubes—Smooth Finish

OD is oversized and ID is undersized for finishing to stated size. Tubes also meet ASTM D1710.

2½″ × 2¼″	3/16″	+0.015″	**8592K13**	148.94

For information about plastics, see page 3564. For high-performance plastics, see page 3600.

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8545KAC**.

Extreme-Temperature Slippery PTFE

- Color: Opaque white, unless noted
- Temp. Range: –328° to +500° F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Poor, unless noted
- Impact Strength: Good, unless noted
- Very low friction, unless noted
- Excellent electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling, unless noted
- Hardness: Shore D50-D65

A good choice for electrical applications, polytetrafluoroethylene (PTFE) does not conduct electricity, offers good chemical resistance at high temperatures, and has a very slick surface. All except miniature cord are FDA compliant for food contact. All except balls meet UL 94V0 for flammability.

Sheets—Smooth Finish

- Color: Varies from translucent white to opaque white depending on thickness

The dependable performance of virgin PTFE resins at prices comparable to the reprocessed resins of mechanical grade sheets. Sheets up to 1/8″ thick meet ASTM D3308, and 3/16″ and 1/4″ thick sheets meet ASTM D3294. All meet 3-A sanitary standard requirements. Width and length tolerances are ±1/4″.

Thick.	Thick. Tolerance	12″×12″		12″×24″		12″×36″		24″×24″		36″×36″		48″×48″

High-Purity Sheets—Smooth Finish

- Max. Temp.: 500° F; low end not rated

Meet AMS 3652, 3660, and 3667. Molded in a clean room environment, bagged, and labeled with lot and batch numbers for traceability. Width and length have a plus tolerance.

Thick.	Thick. Tolerance	6″×6″		12″×12″

Tear-Resistant Film—Textured Finish

- Temp. Range: –200° to +500° F
- Good electrical insulator

Practically inert to all chemicals and tear resistant from all directions, this film remains slippery and flexible, making it an excellent choice when you need longevity and serviceability.

Width and length tolerances are +1/4″.

Thick.	Thick. Tolerance	12″×12″		36″×36″	
0.009″	±0.004″	1761T21	$21.29	1761T41	$161.47

Adhesive-Backed Film—Smooth Finish

- Max. Temp.: 250° F; low end not rated
- Impact Strength: Good, unless noted
- Excellent electrical insulator, unless noted

This film has an acrylic adhesive on one side, so it can be bonded to nearly any surface. Width and length tolerances are ±1/4″. Film is FDA compliant.

Sold in 1-ft. lengths. Thicknesses up to 0.010″ have a maximum continuous length of 100 feet. Thicknesses 0.020″ and larger have a maximum length of 15 feet. **To Order:** Please specify length.

Thick.	Thick. Tolerance	12″ Wide	Per Ft.	36″ Wide	Per Ft.

Extreme-Temperature Slippery PTFE *(Material continued from previous page)*

- Color: Opaque white, unless noted
- Temp. Range: –328° to +500°F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Poor, unless noted
- Impact Strength: Good, unless noted
- Very low friction, unless noted
- Excellent electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling, unless noted
- Hardness: Shore D50-D65

A good choice for electrical applications, polytetrafluoroethylene (PTFE) does not conduct electricity, offers good chemical resistance at high temperatures, and has a very slick surface. All except miniature cord are FDA compliant for food contact. All except balls meet UL 94V0 for flammability.

Miniature Cord—Smooth Finish

- Cut with scissors

Meets AMS 2651 and 3656.

Reprocessed PTFE

- Color: Opaque white
- Temp. Range: –328° to +500°F
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Not rated
- Very low friction
- Not rated as an electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Shore D50-D70

Reprocessed polytetrafluoroethylene (PTFE), often called mechanical-grade PTFE, provides low friction at a lower cost than Extreme-Temperature Slippery PTFE (above and on page 3603). *Note:* Not recommended for electrical applications.

Rods—Smooth Finish

Meet ASTM D1710. Rods with a length of 1 ft. to 5 ft. have a length tolerance of –1/4″; 6-ft. rods have no length tolerance. Sold in 1-ft. increments, unless noted. Maximum length is 6 feet. **To Order:** Please specify length.

Weldable PTFE

- Color: Opaque white
- Max. Temp.: 500°F; low end not rated
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Good
- Very low friction
- Excellent electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Shore D52

Also known as NXT, this chemically modified polytetrafluoroethylene (PTFE) is weldable and offers exceptional chemical and permeation resistance. Meets AMS 3652, 3660, and 3667. Material is FDA compliant and meets UL 94V0 for flammability.

Sheets—Smooth Finish

Width and length tolerances are +3/32″ for 6″×6″ sheets and +1/4″ for 12″×12″.

Thick.	Thick. Tolerance	6″×6″		12″×12″

Wear-Resistant Glass-Filled PTFE

- Color: Opaque off-white to gray
- Temp. Range: –350° to +500° F
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Not rated, unless noted
- Low friction
- Poor electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling, unless noted
- Hardness: Shore D56-D68

Glass is added for higher pressure, wear resistance, and thermal conductivity. Maintains good dielectric properties with some negative impact on chemical resistance.

Sheets—Smooth Finish

- Impact Strength: Good
- Excellent electrical insulator

Meet UL 94V0 for flammability. Width and length tolerances are +1/4″, –1/16″. Thickness tolerance is ±10%.

Thick.	6″×6″	12″×12″	12″×24″
1/32″	8636K11 $7.81	8636K21 $30.21	8636K31 $56.40

Wear-Resistant Slippery Rulon

- Color: Opaque gold, maroon, and blue-green
- Temp. Range: –400° to +550° F
- Softening Temp.: 630° F, except *blue-green* not rated
- Tensile Strength: Poor
- Impact Strength: Excellent
- Low friction, except *blue-green* not rated
- *Gold*, poor electrical insulator; *maroon*, good electrical insulator; *blue-green*, not rated as an electrical insulator
- Use indoors and outdoors
- *Gold* and *blue-green*, machine with high-speed steel tooling; *maroon*, machine with carbide tooling
- Hardness: Shore D60-D65

Manufactured from modified PTFE, this self-lubricating plastic offers high wear resistance. Ideal for bearing, gasket, and sealing applications.

Gold (Grade J)—Has the lowest coefficient of friction, making it more slippery than any modified PTFE material. Works with soft and hard metals. Not recommended for steam or highly acidic environments.

Maroon (Grade LR)—Has better chemical resistance than Grade J. Use with hard metals.

Blue-Green (Grade 142)—This thermally conductive, bronze-filled film is ideal for expansion pads and linear slides for machine tools.

Sheets and Film—Rough Finish, except Gold has a Smooth Finish

Sheets have width and length tolerances of ±1/4″. Thickness is oversized to allow for finishing, except 1/8″ and 1/4″ thick sheets, which have a tolerance of –1/64″.

Film has a width tolerance of ±1/16″ and a length tolerance of +1/4″. It's etched on one side to accept an adhesive.

6″×6″ SHEETS

Ultra-Moisture-Resistant CTFE

- Color: Opaque white, except 1/16″ thick sheet is clear
- Max. Temp.: 248° F; low end not rated
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Good
- Very low friction, unless noted
- Excellent electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Shore D75-D85

Also known as PCTFE, CTFE is comparable to Kel-F and has the lowest vapor transmission rate of any plastic in a wide temperature range. Good for cryogenic seals. FDA compliant.

Sheets—Smooth Finish

- Not rated for friction

Width and length tolerances are ±1/4″. Meet UL 94V0 for flammability. Sold in 6″×6″ sheets.

Thick.	Thick. Tolerance		
1/16″	+0.013″	85425K51	$69.50
1/4″	+0.050″	85425K53	216.74
5/8″	+0.125″	85425K54	496.29

Rods—Smooth Finish

Sold in 1-ft. increments; maximum length is 6 feet. **To Order:** Please specify length.

Dia.	Dia. Toler.		Per Ft.
1/8″	+0.002″	85415K16	$5.90

For information about plastics, see page 3564. For high-performance plastics, see page 3600.

For additional information about these products, including mechanical and physical properties, go to mcmaster.com and search for **8545KAC**.

Dimensionally Stable PVDF

- Color: Translucent white to off-white
- Temp. Range: –40° to +265° F
- Softening Temp.: Not rated
- Tensile Strength: Good
- Impact Strength: Good
- Low friction
- Poor electrical insulator, unless noted
- Use indoors and outdoors
- Machine with high-speed steel tooling; cut *film* with scissors
- Hardness: Rockwell R100, unless noted

Also known as Kynar and Solef, PVDF is stronger and can hold its shape better than PTFE and FEP, within a narrower temperature range. Meets UL 94V0 for flammability. Resin is FDA compliant.

Sheets—Smooth Finish

Width tolerance is ±1/4″. Length tolerance is ±1/2″. Thickness tolerance is +0.025″.

Thick.	6″×6″		12″×12″	
1/4″	8688K711	$27.83	8688K621	$92.43

Impact-Resistant Slippery FEP

- Color: Translucent white, except *film* is clear
- Temp. Range: –320° to +400° F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: Excellent, unless noted
- Low friction, unless noted
- Excellent electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling; cut *film* with scissors
- Hardness: Rockwell R25, unless noted

FEP provides greater impact strength than PTFE, without sacrificing low friction. All except adhesive-backed film meet UL 94V0 for flammability and are FDA compliant.

Sheets—Smooth Finish

Width and length tolerances are ±1/4″.

Thick.	Thick. Tolerance		6″×6″
3/32″	+0.019″	85375K213	$34.40

Extreme-Temperature Dimensionally Stable PFA

- Color: *Film*, clear; *rods*, translucent white
- Temp. Range: –320° to +500° F
- Softening Temp.: Not rated
- Tensile Strength: Poor
- Impact Strength: *Film*, not rated; *rods*, excellent
- Low friction
- Excellent electrical insulator
- Use indoors and outdoors
- *Film*, cut with scissors; *rods*, machine with high-speed steel tooling
- Hardness: *Film*, not rated; *rods*, Shore D60

PFA has excellent chemical resistance. Resists deforming under stress and high temperatures. Meets UL 94V0 for flammability.

Film—Smooth Finish

Width tolerance is ±1/16″.
Sold in 1-ft. increments; maximum length is 50 feet. **To Order:** Please specify length.

Thick.	Thick. Tolerance	Wd.		Per Ft.
0.001″	±0.00025″	24″	84955K12	$5.78

Ultra-Machinable Medical-Grade Radel

- Color: Translucent amber
- Max. Temp.: 320° F; low end not rated
- Softening Temp.: 440° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Low friction
- Poor electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R122

Withstands prolonged exposure to chemicals better than polysulfone and maintains its strength and creep resistance. Ideal for medical applications such as sterilization trays and surgical instrument handles. Meets ASTM D6394, UL 94V0 for flammability, and USP Class VI. *Note:* Should not be used for implantation in the human body. FDA compliant.

Sheets—Rough Finish

Width tolerance is +1/4″ and length tolerance is +1/2″.

Ultra-Moisture-Resistant Polysulfone

- Color: Translucent amber
- Temp. Range: –150° to +320° F
- Softening Temp.: 371° F
- Tensile Strength: Excellent
- Impact Strength: Good
- Low friction
- Good electrical insulator
- Use indoors and outdoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R120

Also known as Udel. With its excellent resistance to chemicals, hot water, and steam, this material is a great choice for pharmaceutical, medical, and food-service applications. Meets UL 94V0 for flammability. FDA compliant and NSF certified.

Sheets—Smooth Finish

Width and length tolerances are ±1/8″ for 6″×6″ sheets. Width tolerance is +1/4″ and length tolerance is +1/2″ for 12″×12″ and 12″×24″ sheets.

Electrical Insulating Noryl

- Color: Opaque black
- Temp. Range: –40° to +220° F
- Softening Temp.: 310° F
- Tensile Strength: Good
- Impact Strength: Good
- Low friction
- Excellent electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R119

Made from Noryl EN265 resin, this modified polyphenylene oxide (PPO) offers excellent electrical insulating properties with good impact strength and low moisture absorption. Meets UL 94V0 for flammability, except for rod 8580K71, which meets UL 94V1.

Sheets—Smooth Finish

Thickness tolerance is +0.025″. All sheets except 6″×6″ have a width tolerance of +1/4″ and a length tolerance of +1/2″; 6″×6″ sheets have width and length tolerances of ±1/8″.

High-Strength Electrical Insulating Ultem

- Color: Translucent amber
- Temp. Range: –20° to +338° F
- Softening Temp.: 410° to 426° F
- Tensile Strength: Excellent
- Impact Strength: Poor
- Low friction, unless noted
- Excellent electrical insulator
- Use indoors and outdoors
- Machine with carbide tooling; cut *film* with scissors
- Hardness: Rockwell M109-M112

Made from Ultem 1000 resin, this material offers high strength and excellent electrical insulating properties. Use it for high-voltage circuit-breaker housings. Meets UL 94V0 for flammability, except film, which meets UL 94VTM0. All are FDA compliant. All except film thicknesses 0.003″ to 0.020″ are NSF certified.

Rectangular Bars—Smooth Finish

Width and length tolerances are +1/2″. Thickness tolerance is +0.025″.

Ultra-Machinable Electrical Insulating PPS

- Color: Opaque white
- Max. Temp.: 425°F; low end not rated
- Softening Temp.: Not rated
- Tensile Strength: Excellent
- Impact Strength: Poor
- Low friction
- Excellent electrical insulator
- Use indoors
- Machine with high-speed steel tooling
- Hardness: Rockwell R125

Also known as Techtron, Fortron, and Ryton, this material is easier to machine and absorbs less moisture than Ultem. It bridges the gap between Ultem and PEEK and is good for electronic equipment, chemical production, and automotive applications. Meets ASTM D6358. FDA compliant.

Sheets—Smooth Finish

Width and length tolerances are ±1/4″.

Thick.	Thick. Tolerance	6″×6″	
1/4″	+0.025″	1906T21	$112.48

High-Strength High-Temperature PEEK

- Color: Opaque tan, unless noted
- Temp. Range: –20° to +480°F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Excellent, unless noted
- Impact Strength: Good, unless noted
- Low friction, unless noted
- Good electrical insulator, unless noted
- Use indoors
- Machine with carbide tooling; cut *film* with scissors
- Hardness: Rockwell R126, unless noted

Comparable to Victrex, PEEK (polyetheretherketone) maintains its shape and offers greater tensile strength in a wider temperature range than PTFE. Meets UL 94V0, except *film*, which meets UL 94VTM0 for flammability. *Rectangular bars*, *sheets*, and *tan rods* are FDA compliant.

Rectangular Bars—Smooth Finish

Length and width tolerances are +1/2″. Sold in 2-ft. lengths.

Ultra-Strength High-Temperature Torlon

- Color: Opaque black, unless noted
- Temp. Range: –321° to +500° F, except *balls* are –58° to +450° F
- Softening Temp.: 527° to 532° F, except *balls* are not rated
- Tensile Strength: Excellent
- Impact Strength: Poor, unless noted
- Low friction, except *balls* are not rated
- Not rated as an electrical insulator, unless noted
- Use indoors and outdoors, unless noted
- Machine with carbide tooling
- Hardness: Rockwell E70-E86

Also known as PAI or polyamide-imide. Torlon maintains its tensile strength, shape, and stiffness better than PEEK (shown on previous page), even at the high end of its temperature range. It also handles a wider temperature range than Ultem (shown on page 3579). Meets UL 94V0 for flammability.

Sheets—Smooth Finish

Made from Torlon 4301 resin. Great for severe-wear applications such as nonlubricated bearings and seals. Width and length tolerances are +1/2″.

Thick.	Thick. Tolerance	6″×6″		12″×12″

Ultra-High-Temperature Polyimide (Kapton®, Cirlex, and Vespel®)

- Color: Opaque amber, unless noted
- Temp. Range: –423° to +550° F, unless noted
- Softening Temp.: Not rated
- Tensile Strength: Excellent
- Impact Strength: Poor
- Low friction, unless noted
- Excellent electrical insulator, unless noted
- Use indoors and outdoors, unless noted
- Machine with high-speed steel tooling
- Hardness: Not rated, unless noted

Material maintains its tensile strength and insulation properties in a wide range of temperatures. Meets UL 94V0 for flammability.

Film, when etched, can be coated with adhesive to bond it to itself and other materials.

Film (Kapton® Polyimide)—Smooth Finish

Thermally Conductive

- Color: *Standard* and *adhesive backed*, translucent amber; *electrically conductive*, opaque black; *thermally conductive*, opaque amber
- Temp. Range: –425° to +752° F, except *electrically conductive* is –454° to +464° F
- Friction not rated for *electrically conductive* and *thermally conductive*
- Use indoors

Standard film, also known as Kapton® polyimide Type HN film, has a width and length tolerance of ±1/16″ for 12″×12″ sheets. Width tolerance for 24″ wide sheeting is ±1″.

Electrically conductive film is ideal for antistatic applications. Length and width tolerances are ±0.125″.

Thermally conductive film has three times the thermal conductivity of standard polyimide as well as improved strength. Length and width tolerances are ±0.125″.

Adhesive-backed film has a silicone adhesive on one side. Adhesive has a temperature range of –100° to +500° F. Width and length tolerances are ±1/16″.

To Order: For sheeting, please specify length; maximum length is 20 feet.

★ Not an electrical insulator.

Film (Cirlex)—Smooth Finish

- Color: Opaque dark brown/black
- Temp. Range: –452° to +663° F

This thicker polyimide film is ideal for mechanical seals, electronic interconnects, and stencils. Length and width tolerances are ±1/16″.

Thick.	Thick. Tolerance	13 1/2″×23 1/2″		Thick.	Thick. Tolerance	13 1/2″×23 1/2″

Rods (Vespel® Polyimide)—Smooth Finish

- Hardness: Rockwell E45-E60

Made of Vespel® polyimide SP-1 resin, these rods meet MIL-R-46198, AMS 3644C, ASTM D6456, and UL 945V for flammability. Sold in 1″, 2″, 4″, 6″, 10″, 20″, and 38″ lengths. **To Order:** Please specify length.

About Plastic Laminates

Hard fiber, fiberglass, Garolite, and carbon fiber (also referred to as plastic laminates and composites) are usually created by combining fiber, paper, or fabric with epoxy or resin. Commonly called thermosets because they are created by setting under heat, they have very different properties than more common plastics such as polyethylene and nylon. They are not designed to be heated, so you cannot bend and form them.

Fiberglass and Garolite Material Selector Pack— Includes one individually marked piece of electrical-grade fiberglass (GPO3) and the following grades of Garolite: XX, CE, LE, G-9, G-10, G-11, and G-7. Each piece is 2″×2″×1/16″.
5331K3 ..... $21.68

Tensile Strength— Refers to the amount of stretching a material can withstand before breaking. E-glass and glass carbon are not rated for tensile strength.

Electrical Insulation— All plastic laminates have some electrical insulating capabilities. Ratings are based on their relative insulating (dielectric) strength, which is the maximum voltage the material can withstand. E-glass, glass carbon, and carbon fiber do not have an electrical insulation rating.

Excellent	Good	Poor
G-11	G-10, G-10/FR4, G-9, XX, G-7, GPO3	Hard Fiber, FRP, CE, LE

Machinability— Plastic laminates are difficult to machine; carbide or diamond-tipped tools are generally required when machining to achieve the best results. The machinability ratings below are based on speed, life of the tooling, and the level of ease to attain a satisfactory finish.

Good	Fair	Difficult
Hard Fiber, XX, CE, LE, Glass Carbon	GPO3, E-glass, Carbon Fiber	FRP, G-9, G-10, G-10/FR4, G-11, G-7

Moisture Resistance— The base material affects the amount of moisture absorbed into the laminates. Cloth-based laminates have a higher absorption rate than laminates with other base materials. E-glass, glass carbon, and carbon fiber are not rated for moisture resistance.

Excellent	Good	Fair	Poor
G-10, G-10/FR4, Carbon Fiber, G-11, GPO3	G-7, G-9	FRP	Hard Fiber, CE, LE, XX

Hard Fiber

ⓘ For additional information about the products on this page, including mechanical and physical properties, go to mcmaster.com and search for **8549KAC**.

Hard Fiber

- Color: Opaque gray
- Max. Temperature: 235° F
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor, except electrical-grade sheets are good
- Machine: Use high-speed steel tooling
- Hardness: Rockwell R70-R80

Also known as vulcanized fiber, this material has a cotton-fabric base that has been chemically treated to produce a hard, dense substance that is also lightweight. Meets UL 94HB for flame retardance, MIL-F-1148A, and MIL-F-10336A, except *electrical-grade sheets* meet UL 94HB and MIL-I-695A.

Sheets— Smooth Finish

Width and length tolerances are ±1/8″ for 12″×12″ sheets, ±1″ for 24″×39″ sheets, and ±2″ for 39″×48″ sheets. Flatness tolerance is not rated.

Thick.	Thick. Tolerance	12″×12″		24″×39″		39″×48″

Structural Fiberglass (FRP)

- Color: See below
- Max. Temperature: 140° F, unless noted
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Barcol 40-45, except high-temperature sheets are Barcol 10

Nonconductive, lightweight, and stronger than wood, fiberglass-reinforced polyester (FRP) is ideal for structural applications.

Strips and Sheets—Smooth Finish

- Color: *Standard:* Opaque green; *Fire-Retardant:* Opaque dark gray

Standard sheets have a ±3/16″ width tolerance and +1/2″ length tolerance. Flatness tolerance is 0.008″ per inch. UV resistant. FDA compliant.

Fire-retardant sheets have a ±1/4″ width and length tolerance. Flatness tolerance is 0.008″ per inch. UV resistant. Made with a flame-retardant resin.

Fiberglass

For information about fiberglass, see page 3610.

For additional information about the products on this page, including mechanical and physical properties, go to mcmaster.com and search for **8549KAC**.

Structural Fiberglass (FRP) *(Material continued from previous page)*

- Color: Opaque green
- Max. Temperature: 140° F
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Barcol 40-45

Nonconductive, lightweight, and stronger than wood, fiberglass-reinforced polyester (FRP) is ideal for structural applications.

U-Channels—Smooth Finish

Base and leg tolerances are ±3/32″. Length tolerance is +1/2″. Straightness tolerance is 0.050″ per foot. FDA compliant.

Outside Base	Outside Leg Lgs.	Wall Thick.	Thick. Toler.	5-ft. Length		10-ft. Length

Electrical-Grade Fiberglass (GPO3)

- Color: Opaque red, except tubes are black
- Max. Temperature: 265° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Barcol 50-55

Combining good electrical insulation with arc resistance and high strength, GPO3 fiberglass is a good choice for use in electrical applications. Made of fiberglass-reinforced polyester, this material is also known as polyester-grade industrial laminate. Meets UL 94V0 for flame retardance, except tubes, rods, and 1/32″ thick sheets do not.

Sheets—Smooth Finish

Width and length tolerances are ±1/32″, except 36″ and 72″ sides are ±9/16″ and 96″ sides are ±1″. Flatness tolerance is 0.6″ for 12″ and 24″ lengths, 1.8″ for 36″ and 72″ lengths, and 2.4″ for 96″ lengths.

For information about Garolite, see page 3610.

For additional information about the products on this page, including mechanical and physical properties, go to mcmaster.com and search for **8549KAC**.

Hard and Strong Garolite (XX)

- Color: Opaque tan to brown, except sheets are also offered in opaque black
- Max. Temperature: 265° F
- Tensile Strength: Excellent
- Impact Strength: Poor
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M100-M105

Lighter than metal but dense and strong, this paper-based material absorbs less moisture than Impact-Resistant CE Garolite. Sometimes called paper-grade industrial laminate, phenolic, or Bakelite, it is often used for gasketing and gears. All meet MIL-I-24768/11. *Sheets, strips,* and *rods* also meet UL 94HB for flame retardance.

Sheets—Smooth Finish

Width and length tolerances are ±1″, except 6″×6″ sheets are ±½″. Flatness tolerance is not rated.

Impact-Resistant Garolite (CE)

- Color: Opaque tan to brown, except graphite-filled sheets are black
- Max. Temperature: 235° F
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Rockwell M90-M105

This general-purpose laminate is used primarily for mechanical applications, such as bushings, gears, and rollers. Material has a cotton-cloth base and is sometimes called canvas-grade industrial laminate, phenolic, and Bakelite. *Sheets* and *rods* meet UL 94HB for flame retardance. *Sheets*, *tubes*, and *rods* meet MIL-I-24768/14. *Graphite-filled sheets* do not meet a UL or MIL specification.

Sheets—Smooth Finish

Width and length tolerances are ±1″. Flatness tolerance is not rated. Hardness for 4″×6″ sheets is Barcol 50-60.

Wear-Resistant Slippery Sheets—Smooth Finish

The addition of graphite to CE Garolite acts like a lubricant to reduce surface friction. Often used for bearings and wear pads, this material is a good choice for high-friction applications. Thickness tolerance is ±15% for thicknesses up to 1/4″; +10% for 1/2″ to 1″ thick. Length and width tolerances are ±1″, except 12″×12″ sheets are ±1/4″. Flatness tolerance is not rated.

Thick.	12″×12″		18″×39″		39″×39″

Ultra-Impact-Resistant Garolite (E-Glass)

- Color: Opaque reddish brown
- Max. Temperature: 160° F
- Tensile Strength: Not rated
- Impact Strength: Excellent
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

An economical alternative to our bullet-resistant polycarbonate, E-glass Garolite provides outstanding protection from impact and punctures, making it ideal for use as machine guards. Length and width tolerances are ±1/4″. Flatness tolerance is 0.010″ per inch. Finish is smooth.

Machinable Garolite (LE)

- Color: Opaque tan to brown
- Max. Temperature: 235° F
- Tensile Strength: Excellent, except tubes are good
- Impact Strength: Poor
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Rockwell M100-M105

A fine-weave cotton-cloth base gives LE Garolite good machinability and wear resistance. It is sometimes referred to as industrial laminate, phenolic, or Bakelite. Meets UL 94HB for flame retardance and MIL-I-24768/13, except tubes and 1/32″ thick sheets do not meet UL 94HB.

Sheets—Smooth Finish

Electrically Conductive Garolite (Glass Carbon)

- Color: Opaque black
- Max. Temperature: 290° F
- Tensile Strength: Not rated
- Impact Strength: Not rated
- Not an electrical insulator
- Machine: Use diamond-tipped tooling
- Hardness: Rockwell M110

The graphite-carbon portion of this glass-based material conducts electricity, removing static charges. Material is sometimes called industrial laminate or phenolic. Width and length tolerances are ±1″, except 12″×12″ sheets are ±1/4″. Flatness tolerance is not rated. Finish is smooth.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×42″

For information about Garolite, see page 3610.

For additional information about the products on this page, including mechanical and physical properties, go to mcmaster.com and search for **8549KAC**.

Electrical-Grade Garolite (G-9)

- Color: Opaque brown to gray
- Max. Temperature: 280° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M90-M115

Often used as arc barriers and switchboard panels, this high-strength material has excellent arc resistance. Sometimes called melamine-grade industrial laminate, phenolic, and Bakelite, G-9 Garolite has a woven fiberglass fabric base. Meets UL 94V0 for flame retardance, except 1/32″ thick sheets do not.

Sheets—Smooth Finish

Width and length tolerances are ±1″. Flatness tolerance is not rated.

Multipurpose Garolite (G-10)

- Color: Opaque yellow to green
- Max. Temperature: 265° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M100-M110

Combining good electrical insulating properties with high strength and low moisture absorption, this fiberglass-cloth based material is sometimes called epoxy-grade industrial laminate and phenolic. *Sheets* and *tubes* meet MIL-I-24768/2. *90° angles* meet MIL-I-247681/27.

Flame-Retardant Multipurpose Garolite (G-10/FR4)

- Color: Opaque yellow-brown to green, unless noted
- Max. Temperature: 265°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M110-M115

This flame-retardant version of G-10 Garolite offers excellent strength, low water absorption, and good electrical insulating qualities in dry and humid conditions. Material is fiberglass-cloth with a flame-retardant resin. Meets MIL-I-24768/27. Meets UL 94V0 for flame retardance, except tubes do not.

(Material continued on following page)

For information about Garolite, see page 3610.

For additional information about the products on this page, including mechanical and physical properties, go to mcmaster.com and search for **8549KAC**.

Flame-Retardant Multipurpose Garolite (G-10/FR4) *(Material continued from previous page)*

- Color: Opaque yellow-brown to green
- Max. Temperature: 265°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M110-M115

This flame-retardant version of G-10 Garolite offers excellent strength, low water absorption, and good electrical insulating qualities in dry and humid conditions. Material is fiberglass-cloth with a flame-retardant resin. Meets MIL-I-24768/27. Meets UL 94V0 for flame retardance, except tubes do not.

Copper-Clad Sheets—Smooth Finish

Sheets are 24″×36″. Copper is 0.0014″ thick. Width and length tolerances are ±1″. Flatness tolerance is not rated.

Thick.	Thick. Tolerance	Copper Clad on One Side		Copper Clad on Both Sides	
1/32″	±0.007″	8521K33	$32.08	8521K44	$37.30
1/16″	±0.008″	8521K35	$42.16	8521K46	$48.22

Tubes—Smooth Finish

Length tolerance is +6″. Wall thickness and straightness tolerances are not rated.
